£1,000,000

is NOT enough!

Poppy Day is a wonderful expression of the public's gratitude towards our ex-service community. But, so great are the calls made upon the Legion's vast welfare organisation by distressed ex-servicemen and women and war widows, that even a record annual collection, stretched to the most economical limits, is not sufficient, The Legion is having to draw upon its reserves in order to give necessary help to ex-servicemen or women who are still suffering in the wake of two world wars, and also to the younger men whose lives have been shattered in Korea, Malaya, Suez and Cyprus. If this work is not to be curtailed then more funds are urgently needed. Please advise your clients on the extreme importance of legacies, bequests and Deeds of Covenant in favour of British Legion Haig's Fund—the largest welfare organisation of its kind in the world.

If you would like to learn more about the Legion's work or if you require bequest or Deed of Covenant forms, please write to—

TAKE UP PELMANISM

And Overcome Worry

WORRY uses an immense amount of vital force. People who worry not only use up their energy during the day by worrying, but they rob themselves of that greatest of all restoratives, sleep. People who worry can't sleep. They lose their appetite. They often end up by getting really ill. How often have you heard it said, "I am worried to death!"?

What do you suppose would happen if a person who was putting himself into mental, moral, and physical bankruptcy by worrying, were to convert all this worry-energy into constructive action? In no time at all he would have accomplished so much that he would have nothing to worry about.

Nothing is more discouraging to a worrying person than to have someone say, "Oh, don't worry, it will all come out right!"

That is not reassuring at all. The worrying one can't see how it is going to come out all right. But if the men and women who worry could be shown how to overcome the troubles and difficulties that cause worry, they soon would cease wasting their very life-blood in worrying. Instead, they would begin devoting their energies to a constructive effort that would gain them freedom from worry for the rest of their lives. You say that sounds plausible, but can it be done?

It can be done, and is being done, by Pelmanism every day in the year. This is all the more remarkable because to-day the world is in an upset condition and people are worrying to an unusual extent. Yet, every mail brings letters to the Pelman Institute from grateful Pelmanists who have ceased to worry.

People to-day are all too prone to complain that they just have to worry. But once they become Pelmanists they cease this negative form of thought.

HOW TO LEARN LANGUAGES
The Pelman Languages Institute teaches **French, German, Spanish,** and **Italian** without translation. Write for particulars and specimen lesson of the language that interests you, which will be sent gratis and post free.
Pelman Languages Institute
200 Norfolk Mansions, Wigmore Street
London, W.1

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

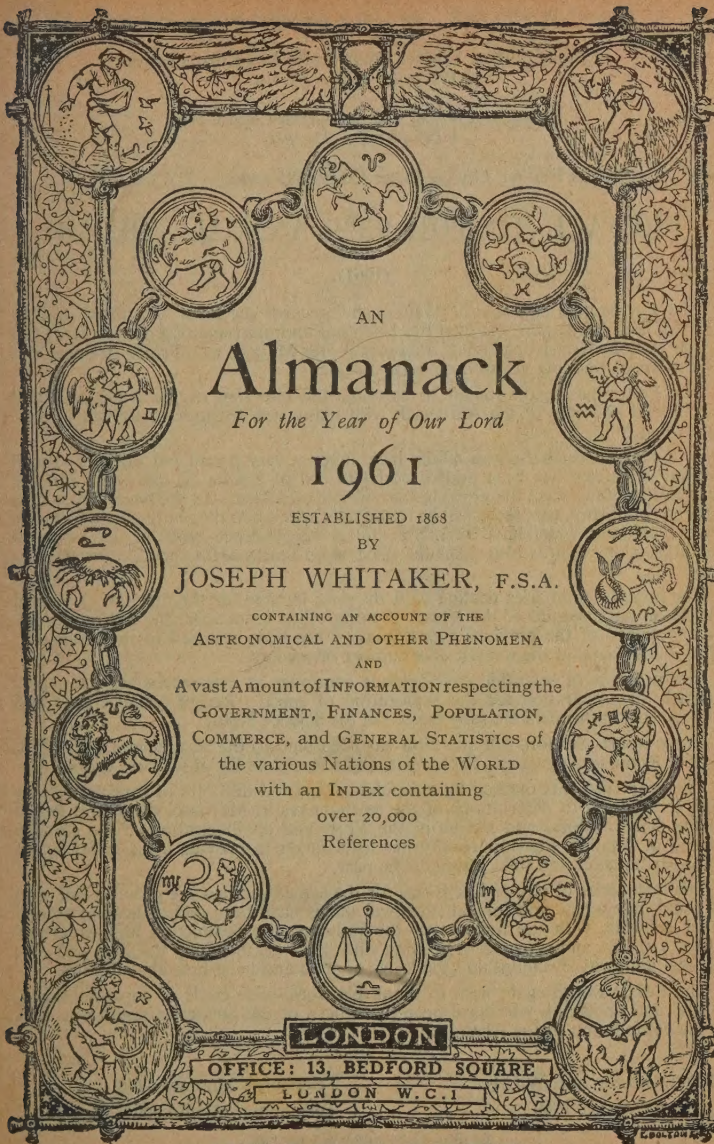
But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops powers you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops :—

—Judgment	**—Initiative**
—Optimism	**—Reliability**
—Perception	**—Will-Power**
—Self-Control	**—Personality**
—Concentration	**—Resourcefulness**
—Self-Confidence	**—Reliable Memory**

Pelmanism is a true philosophy of living for ordinary sensible people who wish to make the best of themselves at all times and under all circumstances. The Pelman Institute has won and held its unique position through all wars and worries, trials and tribulations, during the last half-century.

Remember — Everything you do is preceded by your attitude of mind

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.



Send for the Free book

The Pelman Course is simple and interesting and takes up very little time ; you can enrol on the most convenient terms. The Course is fully described in ***The Science of Success,*** which will be sent you, gratis and post free, on application to :—

Shorter Edition, Orange Paper Cover, 695 pages — 11*s.* 6*d. net*

PREFACE TO THE 93RD ANNUAL VOLUME

(1961)

The 93rd annual edition of " WHITAKER " records the birth of a third child to Her Majesty the Queen and also the betrothal and marriage of Princess Margaret to Mr. Antony Armstrong-Jones. Pictures of Her Majesty with Prince Andrew, and of the Royal wedding group have been included.

The Editor has again sought to combine the retention of the traditional and established contents of the Almanack with many new features of topical interest and value.

In a year in which African affairs have taken a very prominent place, a special section on Africa has been added to the record of Events of the Year, and the illustrations also reflect the growing significance of Africa. In the pages devoted to Foreign Countries, too, there will be found new articles on the many states, formerly French colonies, which have recently acquired independence, while in the Commonwealth section, Cyprus also takes its place as an independent republic for the first time.

The annual Summaries dealing with the Arts include for the first time a special article on Architecture of the Year. Among other summaries, the full month-by-month record of the previous year's weather has been restored to the Almanack after many years, at the request of a number of readers.

The progress of scientific development continues at ever-increasing pace, particularly in preparation for the exploration of space. Recent achievements and future plans in this field are fully treated in the Science Notes.

In the Sports Section, full attention has been paid to the Seventeenth Olympiad, held at Rome in August and September, and a complete list of winners provided.

The year 1960 was marked by a number of natural disasters of unusual gravity and, in addition to descriptions of the earthquakes in Morocco, Chile and Persia in the Science Notes and Events of the Year (and an illustration of the damage caused at Agadir), the opportunity has been taken to provide a historical list of great earthquakes and tidal waves of the past.

The new scales of pay and pensions for the armed services are given in full, and as usual, many new and topical statistical tables have been added dealing, among other subjects, with the finances of the railways, the production and export of motor vehicles, and progress in housing since the war, including the sizes and cost of local authority dwellings and the levels of state and local housing subsidies.

The Editor would again wish to thank his world-wide circle of correspondents, official and unofficial, who have once more been of the greatest assistance to him in the compilation of the Almanack.

REMEMBER ST. DUNSTAN'S

THOUSANDS of war-blinded Servicemen and women have become skilled in a craft or profession thanks to the untiring efforts of St. Dunstan's. More important still, they have learnt the feeling of independence. But St. Dunstan's itself must always be dependent on the support of others, for the cost of their special training and welfare relies entirely on voluntary aid. Will you please remember St. Dunstan's in your will? And if you are in a position of trust, think of St. Dunstan's when discussing legacies?

The FACULTY *of* SECRETARIES LIMITED (BY GUARANTEE)

Founded in 1930 the Faculty provides a central organisation for Secretaries and Administrative Officers of Public Bodies and Local Government Authorities, and is well represented both at home and abroad including South Africa where there is a large membership.

The examinations have been widely recognised by the Ministry of Labour and by Public and Municipal Undertakings.

Fellows and Associates use the Qualifying letters F.F.C.S., and A.F.C.S., and the distinctive title of "Corporate Secretary".

The official journal is "The Corporate Secretary" published quarterly.

Regulations as to admission to membership, examination syllabus, etc. can be obtained for 6d. stamp from:

THE REGISTRAR, DEPT. W., G.P.O. BOX 9, GUILDFORD

THE ASSOCIATION OF INDUSTRIAL & COMMERCIAL EXECUTIVE ACCOUNTANTS LIMITED (By guarantee).

Details of membership, registered studentship and examinations may be obtained from the

Secretary, 126 Gt. Cambridge Road, London, N.17

Thames Nautical Training College
H.M.S. Worcester

Established 1862. **Incorporated 1893**

For the training of youths to become Executive Officers in the Merchant Navy. Shipping Companies give preference to "Worcester" trained Cadets. Cadets on entry are enrolled "Cadets R.N.R." and granted the privilege of wearing the uniform of that rank. Qualified Cadets on leaving are granted 1 year's remission of Sea Service.

Ages of Admission—13¾-15 inclusive. Fees—£300 per annum, which include Uniform. Extras reduced to a minimum. Bursaries in reduction of fees available. *For Illustrated Prospectus, apply—*

THE SECRETARY, THAMES NAUTICAL TRAINING COLLEGE, INGRESS ABBEY, GREENHITHE, KENT.

MORDEN COLLEGE

Blackheath, S.E.3

Founded in 1695 by Sir John Morden.

Accommodation with allowances or external pensions for men of good character, at least sixty years of age, who have been merchants and have lost their estates by accident or misfortune in their honest endeavour to get their living by way of trading. Applications also considered from men who have been engaged in a trade or profession in which they have been sustained by their own capital (including the capital of learning and experience) or have held positions of management or direction in or in connection with the Merchant Navy, and through no fault of their own are in want. Accommodation and external pensions are also provided for married men or their widows. All elections are at the absolute discretion of the Trustees. *Clerk to the Trustees:* **Montague S. Graham,** from whom further particulars can be obtained on written application. (*Greenwich* 3365/6).

Friend in the East

When business takes you to the East you will find a friend in every major port of call and at every important inland commercial centre—the branch manager of The Chartered Bank. He is familiar with local economic conditions and opportunities for British trade: he can help you in many ways to make your sojourn worth while.

There are a hundred or more branch managers of The Chartered Bank and its subsidiary, The Eastern Bank Ltd., actively promoting international trade in twenty-five territories from Cyprus to Japan. Their knowledge and experience sustain the extensive financial, advisory and credit information services, for merchants and manufacturers engaged in the Eastern trade, which are available at:

THE CHARTERED BANK

(Incorporated by Royal Charter, 1853)

38 Bishopsgate, London, E.C.2 (Head Office)

2 Regent Street, London, S.W.1 · 52 Mosley Street, Manchester, 2
28 Derby House, Liverpool, 2

THE EASTERN BANK LIMITED 2 & 3 Crosby Square, London, E.C.3 (Head Office)

Associated Banks: The Irano British Bank, Tehran and branches. Allahabad Bank Ltd., Calcutta and branches.

OCCURRENCES DURING PRINTING

The Royal Family and Court

Oct. 10.—The Queen, accompanied by the Duke of Edinburgh, opened the new Queen's Bridge over the Tay at Perth. Later the Queen and the Duke went into residence at Holyrood, and on the following day attended a service in Edinburgh to commemorate 400th anniversary of Reformation in Scotland, and Her Majesty addressed special session of General Assembly of Church of Scotland.

Oct. 16.—The Queen and the Duke of Edinburgh returned to Buckingham Palace from Scotland. Princess Alexandra arrived back at London Airport from Nigeria.

Oct. 17–20.—The State Visit of the King and Queen of Nepal took place.

Politics and General

Oct. 3.—Labour Party Conference opened at Scarborough.

Oct. 4.—In voting for Labour Party Executive, Mr. Mikardo regained his seat and Mr. Wedgwood Benn was defeated.

Oct. 5.—Labour Party Conference passed A.E.U. "unilateralist" motion by 407,000 votes and Mr. Cousins' motion on defence by 43,000 and rejected official defence policy by 297,000. Mr. Crossman was elected Chairman of Party Executive for ensuing year.

Oct. 6.—Mr. Macmillan returned to London from United Nations Assembly and said that he was hopeful that summit meeting would be arranged and he thought that Russia would agree to it.

Oct. 7.—Mr. R. A. Allan resigned from joint Parliamentary Secretaryship of Foreign Office to become joint treasurer of Conservative Party.

Oct. 10.—Government decided to give assistance towards replacement of *Queen Mary* by new ship of about 75,000 tons.

Oct. 12.—Conservative Party Conference opened at Scarborough.

Oct. 13.—Mr. Anthony Greenwood resigned from Labour Shadow Cabinet.

Oct. 17.—The *News Chronicle* and *Star* were sold to Associated Newspapers, Ltd., and ceased to exist as independent newspapers.

Oct. 19.—Report of Royal Commission on Local Government in Greater London recommended 52 boroughs in the area, abolition of L.C.C., and establishment of Greater London Council.

Labour

Oct. 7.—Vauxhall Motors announced dismissal of employees with less than 10 months' service, and short-time working.

Oct. 10.—British Transport Commission agreed to pay increases, back-dated to Jan. 11, to railway engineering shop workers, and N.U.R. called off threatened strike.

Oct. 12.—B.M.C. said that from following week they would be putting 23,500 workers on short time.

Oct. 17.—Tally clerks in London docks returned to work after strike of 3½ weeks.

Commonwealth

Oct. 1.—Nigeria became independent at midnight.

Oct. 3.—Antis Sotoriades, former Eoka guerilla leader, appointed Cyprus Republic's first diplomatic representative in U.K.

Oct. 6.—Figures for referendum on republic in South Africa showed 850,724 in favour and 774,607 against.

Oct. 10.—Three thousand people said to have been killed in cyclone in Ganges Delta area of East Pakistan.

Oct. 11.—Report of Monckton Commission on Federation of Rhodesia and Nyasaland published. It said that Federation was too much disliked to survive in its present form but recommended continued association of the three territories concerned and suggested various constitutional and other changes for consideration at forthcoming review conference. It recommended, however, right of secession by any of the territories. Sir Roy Welensky rejected last proposal and said that Commission had gone beyond its terms of reference.

Mr. Diefenbaker made a number of changes in Canadian Cabinet.

United Nations

Oct. 4.—Mr. Khrushchev called on Mr. Macmillan in New York, and they had discussion lasting about 75 minutes.

Oct. 5–6.—Australian proposal at U.N. General Assembly for meeting of great powers at earliest practicable date was debated, and "neutralist" resolution for renewal of contacts between President Eisenhower and Mr. Khrushchev also failed.

Oct. 7.—Federation of Nigeria admitted as 99th member of United Nations.

Oct. 8.—General Assembly voted against discussing representation of China.

Oct. 12.—Session of General Assembly, which was discussing declaration on "colonialism" put forward by Mr. Khrushchev, was adjourned in uproar.

Foreign

Oct. 12.—Mr. Asanuma, President of Japanese Socialist Party, was assassinated at election rally in centre of Tokyo, by youth said to belong to ultra-nationalist organization.

Oct. 14.—Trial began, on island of Yassiada, in sea of Marmora, of Mr. Bayer, former President of Turkey, Mr. Menderes, former Prime Minister, and his entire Cabinet, and about 400 Democratic Party deputies.

Oct. 19.—U.S.A. banned all exports to Cuba except food and medicine.

Obituary

Oct. 1.—Sir Charles Bruce Gardner, Bt., industrialist, aged 72. Oct. 2.—Ernest Darwin Simon, 1st Baron Simon of Wythenshawe, industrialist, Labour politician and former Chairman of B.B.C., aged 80. Oct. 3.—William John Brown, former trade union leader and M.P., aged 65. Oct. 7.—William Edwin Wheeldon, Labour M.P. for Small Heath division of Birmingham since 1952, aged 62 (by-election pending). Oct. 8.—Henry Lamb, R.A., distinguished artist, aged 77. Oct. 9.—H.H. the Sultan of Zanzibar, aged 81. Oct. 11.—Sir Robert Rankin, Bt., shipowner and former M.P., aged 82. Oct. 13.—James Brabazon Grimston, 5th Earl of Verulam, aged 50. Sir Geoffrey Storrs Fry, Bt., K.C.B., C.V.O., former private secretary to Bonar Law and Baldwin, aged 72. Oct. 17.—John Ogilvy Arbuthnott, 14th Viscount Arbuthnott, Lord-Lieutenant of Kincardineshire, aged 78.

PHENOMENA

January 1d 17h. Mars in conjunction with the Moon. Mars 8° N.

2. Earth at Perihelion, i.e. at least distance (91,300,000 miles) from the Sun.

5d 18h. Jupiter in conjunction with the Sun.

5d 23h. Mercury in superior conjunction with the Sun.

11d 06h. Saturn in conjunction with the Sun.

20d 05h. Venus in conjunction with the Moon. Venus 0°·6 N.

28d 07h. Mars in conjunction with the Moon. Mars 8° N.

29d 07h. Venus at greatest eastern elongation (47°).

CONSTELLATIONS

The following constellations are near the meridian at

MONTHLY NOTES

January 1. New Year's Day.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25 last.

2. Bank Holiday in Scotland.

6. Dividends on Consols, etc., due.

7. Christmas Fire Insurances must be paid.

** Centenary.

Mean semi-diameter in arc 16′·3; in time 1m 10s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 5th and therefore is not visible except for the last few days of the month when it may be seen (magnitude −0·8) low in the W.S.W. shortly after sunset.

VENUS is a brilliant evening star (magnitude −4) throughout the month, attaining its greatest eastern elongation on the 29th. The Moon is close to Venus on the evenings of the 19th and 20th.

MARS is a conspicuous evening star, its magnitude decreasing gradually from −1·3 to −0·5: it is visible all night in the constellation of Gemini. At the beginning of the month it is just N.W. of the 3rd magnitude star ϵ Geminorum and its retrograde motion carries it back during the month to the borders of Taurus and Gemini. In the telescope the planet presents a reddish disc of diameter 14″. Opposition occurred on December 30, 1960, at a distance from the Earth of 57 million miles. By the end of January this value has increased to 70 million miles.

JUPITER is at superior conjunction on the 5th and does not become visible until the very end of the month, when it is a morning star (magnitude −1·4) very low in the E.S.E. just before sunrise.

SATURN is at superior conjunction on the 11th and is thus unsuitably placed for observation.

Mean semi-diameter in arc 16′·2; in time 1m 07s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY (magnitude −0·8 to +1·7) is low in the west after sunset during the first part of the month, reaching its greatest eastern elongation on the 6th. For observers in the northern hemisphere this evening apparition of the planet is the most favourable one of the year. Mercury is unsuitably placed for observation during the second half of the month, inferior conjunction occurring on the 21st.

VENUS dominates the western evening sky throughout the month. On the evening of the 18th it may be seen about 10° to the right of the three-day old moon.

MARS is a conspicuous evening star, (magnitude 0) in the constellation of Gemini and is visible nearly all night. On the 6th it reaches a stationary point and then resumes its westward motion. The Moon passes 8° S. of Mars on the 24th.

JUPITER is a morning star, low on the E.S.E. horizon before sunrise. With its more rapid easterly motion it passes 0°·2 S. of Saturn on the 18th but the two planets remain close together throughout the year.

SATURN is becoming a morning star very low in the E.S.E. before sunrise. It is considerably fainter than Jupiter.

URANUS is at opposition on the 12th in Leo and is only about 4° W.N.W. of *Regulus*. It is barely visible to the naked eye but telescopically shows a slightly greenish disc 4″ in diameter. It is easily located with small optical aid.

ECLIPSE. A total eclipse of the Sun occurs on the 15th. From this country the maximum phase of the partial eclipse occurs within half-an-hour of sunrise. See page 146 for details.

PHENOMENA

March 2. Partial Eclipse of the Moon. See p. 146.

5d 17h. Venus at greatest brilliancy.

12d 20h. Saturn in conjunction with the Moon. Saturn 3° S.

13d 00h. Jupiter in conjunction with the Moon. Jupiter 3° S.

14d 20h. Mercury in conjunction with the Moon. Mercury 0°·9 S.

18d 19h. Venus in conjunction with the Moon. Venus 12° N.

20d 20h. Mercury at greatest western elongation (28°).

20d 21h. Vernal Equinox.

24d 18h. Mars in conjunction with the Moon. Mars 7° N.

Mean semi-diameter in arc 16′·1; in time 1m 05s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY (magnitude +1·5 to +0·2) is visible as a morning star very low in the east before sunrise. Mercury is close to the Moon on the mornings of the 14th and 15th and reaches its greatest western elongation on the 20th. Because of its southerly declination Mercury is rather poorly placed for observation from these latitudes, despite the fact that the planet is at aphelion within 4 days of greatest elongation. This latter point is the reason why it is a whole magnitude fainter than at its greatest elongation in February which occurred within two days of perihelion.

VENUS still dominates the western sky in the early evening attaining greatest brilliancy (magnitude −4·3) on the 5th. A conjunction with the Moon occurs on the 18th though the minimum distance is the unusually large one of 12°. Venus is moving slowly towards Aries but on the 19th reaches a stationary point still in constellation of Pisces.

MARS is an evening star in Gemini its magnitude dropping from +0·3 to +0·9 during the month. Its eastward motion takes it about half a degree north of the third magnitude star ϵ Geminorum on the 21st. The Moon passes 7° S. of Mars on the 24th.

JUPITER is a morning star visible in the S.E. before sunrise. During the month it passes from Sagittarius into Capricornus. Jupiter is more than two magnitudes brighter than Saturn and is further to the east.

SATURN is a morning star in Sagittarius, to be seen in the S.E. sky before sunrise.

ECLIPSE. A partial eclipse of the Moon occurs on the 2nd but is not visible from the British Isles.

ZODIACAL LIGHT. The evening cone may be seen under clear conditions stretching up from the western horizon between the 3rd and the 17th.

Mean Longitude of Ascending Node on April 1, 155°.

According to the Summer Time Act, 1925, *Summer Time* 1961 should begin at 2 A.M., G.M.T., on April 16 and should end on October 8 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

April 1. Lent ends at midnight.

—. First day of Jewish Passover.

—. Refreshment House Licences to be renewed.

3. Bank and General Holiday, England, Wales and N. Ireland.

5. Income Tax Year (1960–61) ends.

8. Lady Day Fire Insurances must be paid.

16. Israel Independence Day.

Mean semi-diameter in arc 16′·0 ; in time 1m 05s.

* In the sense Apparent *minus* Mean. Ignore sign and from April 1–15 apply as in March (see page 99) and for the remainder of the month as in May (see page 107).

MORNING AND EVENING STARS

MERCURY is not suitably placed for observation from the latitudes of the British Isles.

VENUS is now sinking into the twilight sky and is only visible as an evening star (magnitude −3·5) during the first few days of the month. Inferior conjunction occurs on the 10th. During the last week of the month it becomes a morning star (magnitude −4), visible low in the east before sunrise. In the telescope it is a beautiful sight, showing a thin crescent almost a minute of arc in diameter.

MARS is an evening star, its magnitude dropping from +0·9 to +1·3 during the month, as it moves through Gemini. At the end of the month it is in a straight line with *Castor* and *Pollux* and passing S. of the latter star.

JUPITER is a conspicuous morning star (magnitude −1·8) visible above the S.E. horizon for several hours before sunrise.

SATURN is a morning star (magnitude +0·8) on the borders of Sagittarius and Capricornus. Saturn's largest and brightest satellite is Titan, magnitude about +8½, and this may be seen with a small telescope. Its period of revolution around the planet is almost exactly 16 days.

NEPTUNE is at opposition on the 30th in Libra, about 4° N.W. of Alpha. Its magnitude is +8 and it shows a slightly greenish disc of 2½″ diameter in a telescope.

OCCULTATION. An occultation of *Aldebaran* is predicted for the 18th (see page 146).

Mean semi-diameter in arc 15′·8 ; in time 1m 07s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 1st, and therefore unsuitably placed for observation until the second half of the month when it is an evening star (magnitude −0·8 to +0·6) in the west after sunset. It passes about 3° S. of β Tauri on the 22nd.

VENUS is a brilliant morning star visible in the east before sunrise, attaining greatest brilliancy (magnitude −4·2) on the 16th. It may be seen near the old crescent Moon on the mornings of the 11th and 12th. As seen through a telescope the apparent diameter of the planet shrinks from 50″ to 30″ as the distance from the Earth increases. At the same time the phase increases from a thin crescent to a 38% illuminated disc by the end of the month.

MARS is an evening star (magnitude +1·5) in the constellation of Cancer. On the 18th it passes slightly north of the centre of the well known cluster of stars, Praesepe.

JUPITER is a morning star (magnitude −2·0) in the constellation of Capricornus, visible for several hours in the S.E. before sunrise. Eclipses and shadow transits of the four Galilean satellites are given on p. 150.

SATURN is a morning star retrograding on the borders of Capricornus and Sagittarius. It is about 2½ magnitudes fainter than Jupiter. With its system of rings Saturn presents a beautiful and unique telescopic sight. The rings were at their widest opening in 1958 and are now closing up until they will be invisible for a short time in 1966 as the Earth passes through the plane of the rings.

PHENOMENA

June 1d 04h. Mercury at greatest eastern elongation (23°).

2d 18h. Saturn in conjunction with the Moon. Saturn 3° S.

3d 06h. Jupiter in conjunction with the Moon. Jupiter 2° S.

9d 09h. Venus in conjunction with the Moon. Venus 2° N.

14d 18h. Mercury in conjunction with the Moon. Mercury 3° N.

18d 10h. Mars in conjunction with the Moon. Mars 2° N.

20d 02h. Venus at greatest western elongation (46°).

21d 16h. Summer Solstice.

27d 12h. Mercury in inferior conjunction with the Sun.

30d 00h. Saturn in conjunction with the Moon. Saturn 3° S.

30d 12h. Jupiter in conjunction with the Moon. Jupiter 3° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h		d	h
May	1	24	May	16	23
June	1	22	June	15	21
July	1	20	July	16	19

Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra.

Algol is inconveniently situated for observation during June.

PHASES OF THE MOON

	d	h	m
☾ Last Quarter.....	5	21	19
● New Moon.....	13	5	16
☽ First Quarter.....	21	9	01
○ Full Moon.....	28	12	37

	d	h
Perigee (226,960 miles)...	2	03
Apogee (251,770 ,,)...	17	22
Perigee (224,020 ,,)...	30	01

Mean Longitude of Ascending Node on June 1, 151°.

See note on *Summer Time*, page 102.

MONTHLY NOTES

June 5. Constitution Day, Denmark.

15. Moslem New Year (A.H. 1381).

21. Longest day.

24. Midsummer Day. Quarter Day. Sheriffs of London to be elected by the Liverymen.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.

** Centenary.

Mean semi-diameter in arc 15′·8; in time 1m 09s.

* In the sense Apparent *minus* Mean. Ignore sign and from June 1–13 apply as in May (see page 107) and for the remainder of the month as in July (see page 115).

MORNING AND EVENING STARS

MERCURY is an evening star (magnitude +0·7 to +1·8) during the first half of the month, being at greatest eastern elongation on the 1st. Even so it is a difficult object in the long twilight. It passes 1½° S. of ϵ Geminorum on the 9th and remains in the vicinity of this star for several days. The planet is at inferior conjunction on the 27th.

VENUS is a brilliant morning star (magnitude −4) visible in the east before sunrise. It reaches greatest western elongation on the 20th. Venus may be seen very close to the old crescent Moon on the 9th.

MARS is an evening star (magnitude +1·8) and thus no longer the conspicuous object it was at the beginning of the year. In the constellation of Leo, it passes 0°·6 N. of Uranus on the 16th (which offers a good opportunity for locating this faint planet) and 0°·7 N. of *Regulus* on the 27th. On the 18th the Moon passes within 2° of Mars.

JUPITER is still in Capricornus, but now moving westward, having reached its first stationary point near to the end of last month. On the morning of the 3rd it will form an interesting sight with both the gibbous Moon and Saturn in the same part of the sky.

SATURN, on the border of Capricornus and Sagittarius and still with a retrograde motion, now rises in the late evening but is never seen at a high altitude because of its southern declination (−21°).

PHENOMENA

July 5. Earth at Aphelion, i.e. at greatest distance (94,400,000 miles) from the Sun.

8d 20h. Venus in conjunction with the Moon. Venus 2° N.

11d 06h. Mercury in conjunction with the Moon. Mercury 0°·2 N.

17d 02h. Mars in conjunction with the Moon. Mars 0°·3 S.

19d 09h. Mercury at greatest western elongation. (20°).

19d 11h. Saturn at opposition.

25d 11h. Jupiter at opposition.

27d 07h. Saturn in conjunction with the Moon. Saturn 3° S.

27d 17h. Jupiter in conjunction with the Moon. Jupiter 3° S.

CONSTELLATIONS

See note on *Summer Time*, page 102.

MONTHLY NOTES

July 1. Special Session for Licences to deal in Game to be held this month.

3. Dog Days begin (end Aug. 15).

5. Dividends due. Tynwald Day, Isle of Man.

8. Midsummer Fire Insurances to be paid.

12. Bank and General Holiday, Northern Ireland.

15. Latest date for receiving corrections for next year's "WHITAKER."

21. Belgian Independence Day (1831).

31. Gun and Game Licences expire.

Mean semi-diameter in arc 15′·8; in time 1m 08s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is a morning star during the second part of the month, visible in the east before sunrise. Greatest western elongation occurs on the 19th. During this period it increases in brightness from magnitude +1·0 to −0·8, passing S. of *Castor* and *Pollux* in the constellation of Gemini, though the long duration of twilight makes observation difficult.

VENUS is a brilliant morning star (magnitude −3·7). It may be seen near the Moon on the mornings of the 8th and 9th. The planet passes just N.W. of the Hyades in Taurus between the 11th and the 15th, and in particular 3° N. of *Aldebaran* on the 16th.

MARS is an evening star (magnitude +1·8) moving eastwards away from *Regulus* in Leo. The Moon will be close to Mars on the 16th and the 17th.

JUPITER is now visible all night, being at opposition on the 25th. It is considerably brighter than Saturn, having a magnitude of −2·3.

SATURN is at opposition on the 19th and is thus visible all night; its magnitude is +0·3. Saturn and Jupiter remain close together in the same region of sky throughout the year. Jupiter has been to the east (left) of Saturn since February and both planets are about 30° S. of *Altair*.

OCCULTATION. A daylight occultation of *Aldebaran* is visible from the British Isles on the 9th (see page 146).

Mean semi-diameter in arc 15′·8; in time 1m 05s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is a morning star (magnitude −1) low in the east before sunrise, for the first few days of the month. Thereafter it is unsuitably placed for observation, superior conjunction occurring on the 14th.

VENUS is a conspicuous morning star (magnitude −3·5) visible in the east before sunrise. It may be seen near the Moon on the 7th and 8th and passes 7° S. of Pollux on the 24th.

MARS, now a second-magnitude evening star, moves from Leo into Virgo during the month. On the 11th it passes less than 0°·1 S. of the third magnitude star β Virginis. The Moon passes 2° N. of Mars on the 14th. Mars is now crossing the equator, going south, and getting closer to the Sun.

JUPITER is an evening star, still retrograding on the borders of Sagittarius and Capricornus. The Moon passes 3° N. of both Jupiter and Saturn on the 23rd.

SATURN is an evening star in Sagittarius, only 5° west of Jupiter.

ECLIPSE. An annular eclipse of the Sun occurs on the 11th but is not visible from the British Isles.

ECLIPSE. A partial eclipse of the Moon occurs on the morning of the 26th. This is visible from the British Isles, see page 146 for details.

METEORS. The famous Perseid meteor shower occurs on the 12th at a time when moonlight will not interfere with observation at all. The number of meteors seen will increase after midnight.

Mean semi-diameter in arc 15′·9; in time 1m 04s.

* In the sense Apparent *minus* Mean. Ignore sign and except on September 1 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is a difficult evening star (magnitude 0·0 to +0·3) for the second half of the month, very low in the west after sunset. Although greatest eastern elongation (26° from the Sun) occurs on the 28th it is a difficult object in the latitudes of the British Isles never setting much more than half-an-hour after the Sun. However, if located with binoculars or small telescope it is a striking sight on the 21st, passing within 0°·1 of *Spica*. The following night it is only 3° S. of Mars. Mercury is 1m brighter than *Spica* and nearly 2m brighter than Mars.

VENUS is a morning star (magnitude −3·4) and is visible in the east before sunrise. It is close to the Moon on the 7th and on the 22nd passes 0°·4 N. of *Regulus*.

MARS is sinking into the evening twilight and will not be visible again this year.

JUPITER is in Sagittarius, resuming its direct (eastward) motion on the 23rd.

SATURN is an evening star in Sagittarius. Even a small telescope shows both its famous system of rings and its largest satellite Titan.

OCCULTATION. A daylight occultation of Aldebaran is visible from the British Isles on the 29th. (See page 146.)

ZODIACAL LIGHT. Under good conditions the morning cone is visible between the 9th and the 23rd.

Mean Longitude of Ascending Node on October 1, 145°.

According to the Summer Time Act, 1925, *Summer Time* 1961 should begin at 2 A.M., G.M.T., on April 16 and should end on October 8 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

October 2. Pheasant shooting begins.

12. Columbus Day, U.S.A.

14. Michaelmas Fire Insurances must be paid.

23. Hunter's Moon.

29. Turkish National Holiday.

** Centenary.

Mean semi-diameter in arc 16′·2 ; in time 1m 05s.

★ In the sense Apparent *minus* Mean. Ignore sign and throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is not visible during the first part of the month, reaching inferior conjunction on the 22nd. During the last few days of the month it becomes a morning star (magnitude about +1) visible low in the E.S.E. before sunrise. In its retrograde W.N.W. motion it passes a few degrees N.E. of *Spica*, reaching its stationary point about 3½° N. of this star on the last day of the month.

VENUS is a morning star (magnitude −3·4) visible in the east before sunrise. On the 7th it is occulted by the thin crescent Moon. By the end of the month its rapid direct motion brings it within 5° of Mercury.

MARS is no longer suitably placed for observation.

JUPITER (magnitude −1·9) is an evening star, moving from Sagittarius to Capricornus during the month. It is gradually moving towards the position where the Sun is in the plane of the orbits of the Galilean satellites; thus the duration of eclipses has increased noticeably since the beginning of the year. For example the duration of an eclipse of Callisto, satellite IV, increases during the year from 3h 26m to 4h 49m.

SATURN is an evening star in Sagittarius and may be seen in the southern skies after sunset, still only about 5° west of Jupiter.

OCCULTATION. An occultation of Venus is visible from the British Isles on the 7th. (See page 146.)

Mean semi-diameter in arc 16′·2; in time 1m 09s.

* In the sense Apparent *minus* Mean. Ignore sign and throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is a morning star (magnitude +0·5 to −0·7) moving eastwards away from *Spica* and visible in the east before sunrise. It attains its greatest western elongation on the 7th. On the 6th it is close to Venus and the Moon and on the 20th it is 12½° N. of α Libræ. For observers in the northern hemisphere this morning apparition of the planet is the most favourable one of the year. This may be seen by a comparison of the times of sunrise with the times at which the planet attains an altitude of 5° in the East.

VENUS is a morning star (magnitude −3·4) visible in the east before sunrise. On the 4th it passes 4° N. of *Spica* and on the 6th and 7th it is close to the Moon. Although Venus fails to overtake Mercury the two planets remain within a few degrees of each other throughout the whole of the month: in fact, on the 11th the distance is just under 1°.

MARS is unobservable.

JUPITER is an evening star south of α and β Capricorni and about 5° S. of the latter.

SATURN is an evening star in Sagittarius, low in the S.W. in the evening skies and getting nearer to the twilight. Its magnitude has now decreased to +0·8.

OCCULTATION. An occultation of *Aldebaran* is visible from the British Isles during the early hours of the morning of the 23rd. (See page 146.)

THE MOON

Mean semi-diameter in arc 16′·3; in time 1m 11s.

* In the sense Apparent *minus* Mean. Ignore sign and from December 1–25 apply as in November (see page 131) and for the remainder of the month as in January (see page 91).

MORNING AND EVENING STARS

MERCURY remains unsuitably placed for observation during the month, superior conjunction occurring on the 16th.

VENUS is a morning star for the first week of the month (magnitude −3·4) and is visible low in the E.S.E. before sunrise. For the remainder of the month it is lost in the morning twilight.

MARS is unobservable, superior conjunction occurring on the 14th. In fact Mars will not be seen again from these latitudes until the spring of 1962.

JUPITER is an evening star, in the S.W. after sunset and now drawing farther away (east) from Saturn; by the end of the month the separation has increased to about 10°. On the evening of the 11th the Moon, barely four days old, will be seen passing a few degrees above Jupiter. The magnitude of Jupiter has now dropped to −1·6.

SATURN is an evening star (magnitude +0·8) but becomes very difficult to observe in the evening twilight at the end of the month.

METEORS. The well-known Geminid meteor shower occurs on the night of the 12th. Conditions are favourable as the Moon sets at about 21h and after that the number of meteors to be seen will increase as the radiant climbs higher in the sky.

INTRODUCTION TO ASTRONOMICAL SECTION

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Astronomical Ephemeris* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which, although given by the Summer Time Act, 1925, may be altered by Order in Council.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 14th edition, 1959; 17*s*. 6*d*.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time if in force.

In accordance with the usual convention in astronomy, + and − indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

Times of MINIMA OF ALGOL are approximate times of the middle of the period of diminished light (*see* p. 152).

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0h) are used for converting mean time to sidereal time and vice versa.

The G.M.T. of transit of the Sun at Greenwich may also be taken as the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34′, and the Sun's semi-diameter to be 16′, the time

given is that when the true zenith distance of the Sun's centre is 90° + 34′ + 16′ or 90° 50′, or, in other words, when the depression of the Sun's centre below the true horizon is 50′. The upper limb is then 34′ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is 90° 50′ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

(1) *Sunrise or Sunset*, defined as above.

(2) *Civil twilight*, which begins or ends when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight may commence or must cease. In England it varies from about 30 to 60 minutes after sunset.

(3) *Nautical twilight*, which begins or ends when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.

(4) *Astronomical twilight*, which begins or ends when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets and also of other phenomena; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less on account of parallax which may reach 1°.

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as 8°, because of libration. A positive sign indicates westerly longitude, or to the right hand, and applies between New Moon and First Quarter or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from −90° to +90°. Interpolation between two such values may be performed by taking the complement of either of them to 180°, and changing the sign. Thus the value −83° may be treated as +97°, or the value +85° as −95°.

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about 9″, and is negligible when considering sunrise and sunset, but that of the Moon averages about 57′. Hence the computed time represents the moment when the true zenith distance of the Moon is 90° 50′ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56°. They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be *added* if west (as it usually is in Great Britain) or *subtracted* if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of 1° = 4m and 15′ = 1m.

The G.M.T. of transit of the Moon over the meridian of Greenwich is given: these times are

independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda°/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^h\ 05^m$ east, so $\lambda = 13^h\ 55^m$ and the fraction $\lambda/24$ is 0·58. The transit on the local date 1961 Jan. 27 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich.....	Jan. 26	20	26
λ.....		13	55
$0{\cdot}58 \times (21^h\ 13^m - 20^h\ 26^m)$			27
G.M.T. of transit at Sydney.....	27	10	48
Corr. to N.S.W. Standard Time....		10	00
Local standard time of transit	27	20	48

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h\ 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. at which the planet transits the Greenwich meridian is also given. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about 3″ less than the equatorial diameter, while that of Saturn is about 2″ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and open at their widest extent in the Summer of 1958.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time scale for the everyday activities of mankind. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time, but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time scale, and this has led to the concept of Mean Solar Time in which all the days are of exactly the same length and equal to the average length of the Apparent Solar Day.

The positions of the stars in the sky are specified in relation to a fictitious reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time scale so obtained is known as Apparent Sidereal Time.

Greenwich Mean Time

The diurnal rotation of the Earth on its axis causes the Sun and the other heavenly bodies to appear to cross the sky from East to West. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean sun moving uniformly in the sky with the same average speed as the true Sun. Mean Solar Time observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich is called Greenwich

Mean Time (G.M.T.) The mean solar day is divided into 24 hours and, for astronomical and scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated a.m. (before noon) and p.m. (after noon): Civil time is also usually advanced by one hour during summer time (see later), whereas G.M.T. remains unchanged.

Universal Time

Before 1925 January 1, G.M.T. was reckoned in 24 hours commencing at noon: since that date it has been reckoned from midnight. In view of the risk of confusion in the use of the designation G.M.T. before and after 1925, the International Astronomical Union recommended in 1928 that astronomers should, for the present, employ the term Universal Time, U.T. (or Weltzeit, W.Z.) to denote G.M.T. measured from Greenwich Mean Midnight.

In precision work it has now become necessary to take account of small variations, hitherto negligible, in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated U.T.0. Observed time corrected for the effects of the motion of the poles (giving rise to a "wandering" in longitude) is designated U.T.1. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation. U.T.1 corrected for this effect is designated U.T.2, and provides a time scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

Apparent Solar Time

As has been mentioned, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle, but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun. The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right-angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of 23° 27′. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its maximum values in February (−14 mins.) and early November (+16 mins.). It has a zero value on four dates during the year, and it is only on these dates (approx. April 15, June 14, Sept. 1, and Dec. 25) that a sundial shows Mean Solar Time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The term sidereal (or "star") time is perhaps a little misleading since the time scale so defined is not exactly the same as that which would be defined by successive transits of a selected star, as there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0·008 seconds. Superimposed on this steady precessional motion are small oscillations called nutation, giving rise to fluctuations in apparent sidereal time amounting to as much as 1·2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed. The conversion of G.M.T. to Greenwich sidereal time (G.S.T.) may be performed by adding the value of the G.S.T. at 0^h on the day in question (page II of each month) to the G.M.T. converted to sidereal time using the table on p. 145.

Example. To find the G.S.T. at $18^h\ 10^m\ 41^s$ G.M.T. on Nov. 18

	h	m	s
G.S.T. at 0^h	03	47	11
G.M.T.	18	10	41
Acceleration for 18^h		2	57
" " $10^m\ 41^s$			2
Sum = G.S.T. = ...	22	00	51

If the observer is not on the Greenwich meridian then his longitude, measured positively westwards from Greenwich, must be subtracted from the G.S.T. to obtain Local Sidereal Time (L.S.T.). Thus, in the above example, an observer 5^h east of Greenwich, or 19^h west, would find his L.S.T. as $3^h\ 00^m\ 51^s$.

Ephemeris Time

In the study of the motions of the Sun, Moon and planets, observations taken over an extended period are used in the preparation of tables giving the apparent position of the body each day. A table of this sort is known as an ephemeris, and may be used in the comparison of current observations with tabulated positions. A detailed examination of the observations made over the past 300 years shows that the Sun, Moon and planets appear to depart from their predicted positions by amounts proportional to their mean motions. The only satisfactory explanation is that the time scale to which the observations were referred was not uniform as had been supposed. Since the time scale was based on the rotation of the Earth, it follows that this rotation is subject to irregularities. The fact that the discrepancies between the observed and ephemeris positions were proportional to the mean motions of the bodies made it possible to secure agreement by substituting a revised time scale and recomputing the ephemeris positions. The time scale which brings the ephemeris into agreement with the observations has been named Ephemeris Time (E.T.).

The new unit of time has been defined in terms of the apparent annual motion of the Sun. Thus the second is now defined in terms of the annual motion of the Earth in its orbit around the Sun (1/31556925·9747 of the Tropical Year for 1900

January 0 at 12 h.E.T.) instead of in terms of the diurnal rotation of the Earth on its axis (1/86 400 of the Mean Solar Day). In many branches of scientific work other than astronomy there has been a demand for a unit of time that is invariable, and the second of Ephemeris time was adopted by the Comité International des Poids et Mésures in 1956. The length of the unit has been chosen to provide general agreement with U.T. throughout the 19th and 20th centuries. During 1961 the estimated difference E.T.—U.T. is 34 seconds. The precise determination of E.T. from astronomical observations is a lengthy process, as the accuracy with which a single observation of the Sun can be made is far less than that obtainable in, for instance, a comparison between clocks. It is therefore necessary to average the observations over an extended period. Largely on account of its faster motion, the position of the Moon may be observed with greater accuracy, and a close approximation to Ephemeris Time may be obtained by comparing observations of the Moon with its ephemeris position. Even in this case, however, the requisite standard of accuracy can only be achieved by averaging over a number of years.

Atomic Time

The fundamental standards of time and frequency must be defined in terms of a periodic motion adequately uniform, enduring and susceptible of measurement. This has led in the past to the adoption of standards based on the observed motions in the Solar System. Recent progress has made it possible to consider the use of other natural standards, such as atomic or molecular oscillations. The oscillations so far employed are not in fact continuous periodic motions such as the revolution of the electrons in their orbits around the nuclei. The continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. At the National Physical Laboratory regular comparisons have been made since the middle of 1955 between quartz clocks of high stability and a frequency defined by atoms of caesium. The standard has proved of great value in the precise calibration of frequencies and time intervals: it has also been possible to build up a scale of "atomic time" by using continuously-running quartz clocks calibrated in terms of the caesium frequency standard. Because of the high precision attained in the comparisons, cumulative errors in the integrated time scale do not become serious in the course of a few years, and the atomic time scale may thus be compared with the astronomical time scale.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. These are of adequate accuracy for normal domestic and commercial needs but for precision users engaged in scientific and survey work special time signals controlled by the Royal Observatory are broadcast by the Post Office each day at 1000 and 1800 U.T. These signals consist of a series of pips marking the seconds, and extending over five minutes: the minute pips are lengthened to facilitate identification. These signals are monitored at the Observatory, and corrections to the times of reception are published. They are normally radiated by Rugby GBR (16 kc/s), with Criggion GBZ (19·6 kc/s) as reserve, together with associated short-wave transmitters.

SUMMER TIME IN THE UNITED KINGDOM

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts*, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War, the duration of Summer Time was extended, and in some years Double Summer Time was in force. The dates of the actual duration since 1951 are:

1951 Apr. 15—Oct. 21	1956 Apr. 22—Oct. 7
1952 Apr. 20—Oct. 26	1957 Apr. 14—Oct. 6
1953 Apr. 19—Oct. 4	1958 Apr. 20—Oct. 5
1954 Apr. 11—Oct. 3	1959 Apr. 19—Oct. 4
1955 Apr. 17—Oct. 2	1960 Apr. 10—Oct. 2

SUMMER TIME ABROAD

Variations of the Standard time may be used and the dates of adoption are decided annually. In some countries the variations occur in winter and are called Winter Time†.

British Commonwealth—	*Foreign Countries*—	
British Honduras†	Albania	Korea

STANDARD TIME

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. In some countries (†) Standard Time is no longer used and the time given in the table below is that in normal use.

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately $7\frac{1}{2}°$ on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast on Greenwich Time.

12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).

11½ „ F...Norfolk I., Nauru I.

11 „ F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.

10 „ F...Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Marianas Is.

9½ „ F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.

9 „ F...Japan, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuril Is., Manchuria.

8½ „ F...Moluccа Is., Korea.

8 „ F...China (coast), Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, N. Borneo, Formosa, Pescadores Is., Vietnam.

7½ „ F...Federation of Malaya, Singapore, Indonesian Borneo and Java.

7 „ F...S. Sumatra, Christmas I. (Indian Ocean), Thailand, Indo-China, Cambodia, Laos.

6½ „ F...Burma, Cocos-Keeling Is., N. Sumatra.

6 „ F...Pakistan (East).

5½ „ F...India, Portuguese India, Ceylon, Laccadive Is., Andaman and Nicobar Is.

5 „ F...Chagos Archipelago, Pakistan (West).

4 „ F...Mauritius, Seychelles, Réunion, 'Oman, U.S.S.R., 40° E. to 52°30′ E.

3½ „ F...Persia

3 „ F...U.S.S.R. west of 40° E., Iraq, Eritrea, Aden, Socotra I., Somaliland, Comoro Is., Madagascar, Uganda, Kenya, Tanganyika, Zanzibar, Estonia, Latvia, Lithuania.

2 „ F...Turkey, Greece, Bulgaria, Roumania, Finland, Egypt, Israel, Jordan, Syria, Cyprus, Rhodesia, Union of South Africa and Protectorates, Mozambique, Republic of Sudan, Congo (East), Cyrenaica †, Crete, Lebanon, Tripolitania.

E. European.

1 hr. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France †, Luxemburg †, Spain †, Gibraltar †, Monaco †, Balearic Is. †, Poland, Austria, Hungary, Switzerland.

Mid-European.

Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, French Equatorial Africa, Cameroons, Congo (West), Angola, Spitzbergen, Algeria, Dahomey, Corsica †, Sardinia.

Greenwich Time. Great Britain, Ireland, Faroë, Channel Is., Portugal, Morocco, Mauritania, Sierra Leone, Ivory Coast, Togoland, Ghana, Principé I., Guinea Republic, Senegal, St. Helena, Gambia, Canary Is. †, Ascension I., Tristan Da Cunha, Tangier, São Thomé, Rio de Oro.†

Slow on Greenwich Time.

1 hr. S...Iceland, Madeira, Portuguese Guinea.

2 hrs. S...Azores, Cape Verde Is., Fernando Noronha I., Scoresby Sound, South Georgia.

3 „ S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil, Uruguay, Argentina †.

3½ „ S...Newfoundland, Labrador, Dutch Guiana.

3¾ „ S...British Guiana.

4 „ S...Canada east of 68° W., Greenland (Thule Area), Puerto Rico, Lesser Antilles, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile.

Atlantic

4½ hrs. S...Venezuela, Curaçao I.

5 „ S...Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic.

Eastern.

6 hrs. S...Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102°W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.

Central.

7 hrs. S...Canada from 102° W. to 120° W., Mountain States of U.S.A., part of Mexico.

Mountain.

8 hrs. S...Canada west of 120° W., Alaska (south-east coast), Western States of U.S.A., part of Mexico.

Pacific.

9 hrs. S...Alaska N. of Cross Sound to 141°W., Yukon.

10 „ S...Alaska from 141°W. to 162°W., Low Archipelago, Marquesas, Austral and Society Is., Hawaii, Christmas I. (Pacific Ocean), Fanning I.

11 „ S...Aleutian Is., Alaska (west coast), Samoa, Midway Is.

In the Tonga Islands the time *12h. 20m.* fast and in Chatham Is.† *12h. 45m.* fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180 °	15° S.	172½°W.	53 ° N.	170° E.
51° S.	180 °	5° S.	180°	65½° N.	169°W.
45° S.	172½°W.	48° N.	180°	75 ° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of transit given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12h fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is 36° 50′ south (or minus) and the longitude 11h 39m east. Taking the declination as +20°·7, we find

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1′ throughout the year for all latitudes up to 60°.

Example.—On July 4 at 23h 17m G.M.T. in longitude 2h 34m west, the altitude of *Polaris* (corrected for dip, etc.) is found to be 41° 56′.

The local sidereal time is found by the method given on page 141 to be 15h 34m. Hence

	°	′
Observed altitude	41	56
Correction from table		+51
Latitude	42	47

MEAN AND SIDEREAL TIME

3	34	12	32	20	1
4	00	11	62	17	0
4	30		90	00	

The length of a sidereal day in mean time is 23h 56m 04s.09. Hence 1h M.T. = 1h + 9s.86 S.T. and 1h S.T. = 1h − 9s.83 M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the required acceleration or retardation. Thus the acceleration for 11m 26s (which lies between the entries 9m 07s and 15m 13s) is 2s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column *above* the given tabular entry; e.g. the retardation for 45m 46s is 7s.

Example.—Convert 14h 27m 35s from S.T. to M.T.

	h	m	s
Given S.T.	14	27	35
Retardation for 14h		2	18
Retardation for 27m 35s			5
Corresponding M.T.	14	25	12

For further explanation, see p. 141.

The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1961

ECLIPSES, 1961

In 1961 there will be four eclipses, two of the Sun and two of the Moon.

1. A total eclipse of the Sun on February 15, visible as a partial eclipse from the British Isles. The path of totality crosses France, Italy, the Balkans and Russia. The maximum duration is a little under 3 minutes.

The partial phase is visible from North Africa, Europe and the whole of Asia except for the eastern and southern parts.

From Greenwich, where only the partial phase is visible, the Sun rises at $07^h\ 15^m$, with the Moon covering the right hand half of the Sun's disc. The maximum phase occurs at $07^h\ 44^m$ when about nine-tenths of the Sun's disc will be covered; the eclipse ends at $08^h\ 48^m$ approximately, when the moon passes away from the eastern edge of the Sun.

2. A partial eclipse of the Moon on March 2, not visible from the British Isles but visible from N. America, the Pacific, Australasia, Asia and eastern Europe. The earth's shadow strikes the Moon at $11^h\ 51^m$ and leaves at $15^h\ 05^m$.

3. An annular eclipse of the Sun on August 11, which is not visible from the British Isles. The annular phase is only visible from the South Atlantic and Antarctica but the partial eclipse may be seen from eastern South America, South Africa and Madagascar.

4. A partial eclipse of the Moon on August 26, visible from the British Isles and in Europe generally, Africa and North and South America. The Earth's shadow impinges on the lunar surface at $01^h\ 35^m$ and leaves at $04^h\ 42^m$. Actually the eclipse is almost total at $03^h\ 08^m$ when 99·2% of the Moon's disc will be in shadow.

OCCULTATIONS, 1961

The series of occultations of Aldebaran continues though unfortunately three of the four visible from this country occur in daylight. The fourth occultation of Aldebaran occurs during the early hours of the morning of November 23, less than a day after Full Moon. The Moon also occults some of the stars in the Hyades, the V-shaped open cluster in Taurus which has Aldebaran at one tip of the V. The most interesting set of occultations of these stars occurs on the night of September 28–29. Although a new series of occultations of Regulus commences in 1961 none of these occultations are visible from the British Isles.

The most interesting occultation will be that of Venus on the morning of October 7, though here again observers in this country will find both phases occurring at or shortly after sunrise. This occultation occurs only $2\frac{1}{2}$ days before New Moon and Venus will be a nearly full disc (89% illuminated) of 12″ diameter.

OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6·5 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope. The altitude limit is reduced from 10° to 2° for stars and planets brighter than magnitude 2·0 and such occultations are also predicted in daylight.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29′, Long. 0°) and Edinburgh (Lat. 55° 56′, Long. 3° 11′ west). The coefficients a and b are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a.\Delta\lambda + b.\Delta\phi$ to the given G.M.T.

As an illustration the disappearance of Aldebaran on November 23 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude	0·0°	+3·2°
Long. of Liverpool	+3·0	+3·0
$\Delta\lambda$	+3·0	−0·2
Latitude	51·5	55·9
Lat. of Liverpool	53·4	53·4
$\Delta\phi$	+1·9	−2·5
	h m	h m
G.M.T.	2 52·8	2 39·7
$a.\Delta\lambda$	−3·6	+0·2
$b.\Delta\phi$	−5·1	+4·0
G.M.T. at Liverpool	2 44·1	2 43·9

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No occn. = star not occulted.

Low = star's altitude less than 10° (2° for bright stars and planets).

Sun = Sun not sufficiently below the horizon.

Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients a and b are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

OCCULTATIONS OF STARS BY THE MOON, 1961

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the Star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20″ and −20″ according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. 51° 30′) the meridian altitude of *Sirius* is found thus:

	°	′
Altitude of equator	38	30
Declination south	16	40
Difference	21	50

The Altitude of *Capella* (Dec. +45° 58′) at lower transit is:

	°	′
Altitude of pole	51	30
Polar distance of Star	44	02
Difference	7	28

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 138). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Some of the astronomical information in this ALMANACK has been taken from the *Astronomical Ephemeris*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

Jupiter's satellites transit across the disk from east to west, and pass behind the disk from west to east. The shadows that they cast also transit across the disk. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena gives the eclipses and shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse
Sh. = Shadow transit
c. = commences
f. = finishes

THE STRUCTURE OF THE UNIVERSE

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes 1½ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and about 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3·26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. Stars fainter than this are not visible to the naked eye; the 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearer star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars can be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star. As mentioned earlier, light takes 3·26 years to travel a distance of one parsec.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like *Vega* and *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our *Sun*, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse* and *Antares*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. The sequence O to M is also a sequence of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types. There is the further advantage that colours can be measured for stars too faint for study by spectroscopic techniques.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, −4; B, −2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used

instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from −4 to +11, or fainter, is known as the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from −4 to −7. The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of −4 to −7 are called supergiants.

The sizes of the stars have been determined mostly by calculation from known surface temperatures and absolute magnitudes. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 864,000 miles in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All these stars appear to be of similar chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is revealed by the spectroscope. The varying motions of the stars in their orbits can be detected by the Doppler shifts of lines in their spectra. The periods of these stars, known as spectroscopic binaries, varies from a few hours to a few years. Some spectroscopic binaries are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is *Algol*, or β Persei, a star normally of the second magnitude (see p. I of each month).

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but

differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude −3. There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulæ. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulæ, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulæ are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulæ because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novæ and supernovæ, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulæ, form part of the Galaxy. The distribution of these various objects in the Galaxy are not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulæ. This structure was first shown by studying the positions of O and B stars; these stars trace out spiral arms. Radio astronomers subsequently found that interstellar hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation has enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years. Population II stars have lower content of metals relative to hydrogen than Population I stars.

EXTRAGALACTIC NEBULÆ

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are the extragalactic nebulæ, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulæ consist of a

NEBULÆ AND CLUSTERS

Object	Constellation	R.A.	Dec.	Description
		h m	°	
47 Tucanæ	Tucana	0 22	−72·4	2nd finest globular cluster, 42′ diam., lucid

M57	Lyra	18 52	+33·0	"Ring" nebula, 1′ diam.
M27	Vulpecula	19 57	+22·6	"Dumb Bell" nebula, planetary, 5′ diam.

M = Messier. H = Sir W. Herschel. Lucid = visible to unaided eye.

central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulæ and the central bulges of the spiral nebulæ are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulæ; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulæ frequently occur in large clusters, each containing hundreds of nebulæ. Many extragalactic nebulæ are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO STARS

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulæ are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulæ. A few strong sources have been identified with peculiar extragalactic nebulæ, and in other cases the source appears to be two colliding galaxies. There is a growing feeling that many of the radio stars may be very distant objects, perhaps even beyond the range of optical telescopes. The process by which the radio waves are generated has not yet been explained.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulæ through the observable region of space. It has been found that in spite of the tendency of nebulæ to cluster together, on a still larger scale the nebulæ are distributed remarkably uniformly. Observations have shown that distant nebulæ have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant nebulæ appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. There are two rival theories of the cause of this expansion. One postulates a gigantic initial explosion some 5,000 million years ago. The other postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Observations have not yet succeeded in distinguishing between these theories.

THE SOLAR SYSTEM

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about 5,700° C., but a relatively short distance inside the surface the temperature reaches 1,000,000° and deeper in the interior, near the centre, it is believed to be in the region of 14,000,000°. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas" does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling onto the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40°–50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (1947 April) covered 7,000 million square miles at its greatest, or approximately 0·7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots,

ELEMENTS OF THE SOLAR SYSTEM

Orb	Mean Distance from Sun: Radii of Earth's Orbit	Mean Distance from Sun: Millions of Miles	Sidereal Period	Synodic Period	Inclination of Orbit to Ecliptic	Diameter	Mass compared with Earth	Period of Rotation on Axis

Pluto	39·46	3666	247 255	367	17 09	Unknown	Unknown	Unknown

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11·1 years.

Maxima		Minima	
1837·2	1907·0	1833·9	1901·7
1848·1	1917·6	1843·5	1913·6
1860·1	1928·4	1856·0	1923·6
1870·6	1937·4	1867·2	1933·8
1883·9	1947·5	1878·9	1944·2
1894·1	1957·9	1889·6	1954·3

The last sunspot maximum was unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the previous maxima in 1937–38 and 1947–49 were also notable for great activity.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as Hα, the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered sky-light is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west, as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked-eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $3^h\ 32^m$, $+82°$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Further observations will be required to deduce the speed of rotation of the planet, but it is considered that this cannot exceed a few weeks.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock revolving round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 420 miles in diameter, Pallas 280 Juno 150 and Vesta 240 miles.

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931, when carefully planned photographic recording of the planet and the surrounding stars, enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately $9^h\ 50\frac{1}{2}^m$, while most of those in higher latitudes give periods between $9^h\ 55^m$ and $9^h\ 56^m$, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +2½°; the last outbreak of such spots occurred in 1939.

Few jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878–80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the

surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order −120° C., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January 1955, on wavelengths of 13·5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Similar evidence has been obtained from other quarters, and an investigation is now being made to discover possible correlations between these radio outbursts and the times at which visible markings on the belts of Jupiter transit across the centre of the disk.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^h\ 15^m$, in higher latitudes $10^h\ 38^m$ has been found in the northern hemisphere and $10^h\ 37^m$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disc is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has nine satellites, of which the largest Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disk, which is quite obvious, though less than 4″ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be $10\frac{3}{4}$ hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disk of well over 2″ in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, was discovered by Lassell soon after

the discovery of the planet. Triton revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite, found by Kuiper in 1949, revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th–15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18·6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^d\ 7^h\ 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24–26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micrometeorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors, shooting-stars or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids,

Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. At the other end of the scale are the micro-meteorites which are too small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. Most comets are found accidentally and few observers search for these objects. One of the few is G. E. D. Alcock of Peterborough, Northants, who, after searching unsuccessfully for six years, found two new comets in 1959 August within the space of 5 days. There have been unusually few bright ones for nearly half a century, and the two naked-eye comets which appeared in 1957 (Comet Arend–Roland in April, and Comet Mrkos in August) therefore aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane—which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, and whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

The brightest periodic comet expected in 1961 is Comet Encke which reaches perihelion on February 5.

THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5·5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of 23½°. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 18½ miles a second. It makes a complete rotation on its axis in about $23^h\ 56^m$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (*see* p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about 12½ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^h\ 50^m$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about 2½ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is diminishing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-north-west at the end.

In 1576 Robert Norman, an English instrument maker, was impressed by the fact that a compass needle perfectly balanced before magnetization, was no longer in balance after being magnetized, but its north-seeking end was always lower. He devised an instrument to show that, in London, the needle would incline at about 72° to the horizontal if allowed to swing in a vertical plane defined by the direction indicated by an ordinary compass needle.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634

found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about 2 p.m., after which there is a gradual return eastwards. The amplitude may be as much as 15′ in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a freely suspended magnetized needle would be directed into the vertical. The north magnetic pole was located by Sir James Ross in 1831 in Arctic Canada at 70° N., 97° W. The Norwegian explorer, Amundsen, in 1904, placed the position about 35 miles north-east of Ross's site. Recent investigations by Canadian surveying parties indicate a position of approximately 75° N. 101° W., but the lines of force do not converge radially upon this point tending rather, on the north side, to concentrate into a channel. From observations by members of Mawson's Australian Antarctic Expedition in 1912 the inferred position of the South magnetic pole was approximately 71° S. 151° E. Results obtained during a French Antarctic Expedition in 1951–2 suggest a position in close agreement with that obtained from an analysis of the field, viz. 67° S. 142° E. The two magnetic poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic poles from the north and south geographical poles appear now to be about 1,000 and 1,600 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

It is evident that the compass needle will not, in general, indicate true north. For example, in Greenland it points 50° to the west, and in British Columbia 30° to the east. A line, running through places where the magnetic and true north coincide is known as an agonic line. One such passes from Hudson Bay through Ontario, Ohio, Carolina, the Bahamas, over South America to Buenos Aires and the South Atlantic; a second, from Sweden and the Baltic, across Poland to Rumania, Asia Minor, Egypt and Ethiopia, whence it passes south of Arabia, across northern India to China and eastern Russia, returning through the north-western Pacific Ocean to Siam, and thence through Sumatra to West Australia.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London		Greenwich	
1580	11° 15′ E.	1820	24° 21′ W.
1622	6 00 E.	1840	23 20 W.
1657	0 00	1860	21 14 W.
1692	6 00 W.	1880	18 33 W.
1723	14 17 W.	1900	16 29 W.
1773	21 09 W.	1920	14 09 W.
1805	24 08 W.	1925	13 10 W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart. The earliest world-chart of magnetic declination was published in 1701 by Edmund Halley, later Astronomer Royal. Charts of other magnetic elements, such as horizontal intensity, vertical intensity, and dip are also published.

Since the secular change in long periods is not predictable with sufficient accuracy in many parts of the world, information on the subject has to be obtained from fixed observatories. Magnetic surveys both by sea and land must also be undertaken periodically.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1961 is 7° 34′ west and allowing an increase of 13′ for each degree of latitude northwards and one of 30′ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 7° 34′ +39′ +150′, i.e. 10° 43′ west. The average annual change at the present time is about 7′ decrease.

The phenomena of terrestrial magnetism have been the subject of continuous study at fixed observatories since early in the 19th century. The number of such observatories now approaches 100 —widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands, while a fourth is maintained by Stonyhurst College, Lancashire. The new Hartland Observatory (a department of the Royal Greenwich Observatory) came into operation in 1957 to take the place of the magnetic observatory at Abinger, Surrey which ceased to operate later in the year. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the higher regions of the atmosphere. It is undoubted that the latter effects are closely associ-

ated with the position of the Sun and with the state of activity of that body, for the diurnal oscillation of the needle everywhere follows *local* time, and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar activity (as indicated by the occurrence of many sunspots) than in the quiet years.

† Inferred ‡ In gauss

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of auroræ. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicuous spot has been apparent near the centre of the Sun's disc a day or two before; but the appearance of a spot is by no means always followed by the occurrence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the Sun's surface.

THE ZODIAC

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about 50″ a year is due to precession; the signs no longer coincide with the constellations whose names they bear.

It is unknown when or by what race the stars were first grouped into constellations; but undoubtedly the twelve figures that lie in the Zodiac have been considered of special importance from very early times, for indications of them are found more often than any others on ancient monuments. The First Point of Aries must have coincided with this constellation rather more than 2000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but we are on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew name for the Zodiac. The latter word is evidently of Greek derivation.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about 2½ feet high and 1½ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Bagdad and its date is estimated to be about 1187–1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

These times of entry in 1961 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC

In 1961 the Sun enters—		d	h

The Standard Ports referred to in the heading are given in *italic*.

EXAMPLE.—Required times of high water at Stranraer on *April* 6, 1961:—

(*a*) *Morning Tide.*

Appropriate time of high water at *Greenock* ..... 14*h.* 51*m.* *April* 5.
Add tide interval ..... 11*h.* 53*m.*

Sum ..... 26*h.* 44*m.*
Subtract 24*h.* ..... 24*h.* 0*m.*
Time of high water at Stranraer, *April* 6*th* ... 2*h.* 44*m.* a.m.

(*b*) *Afternoon Tide.*

Appropriate time of high water at *Greenock* .... 3*h.* 16*m.* *April* 6.
Add tide interval ..... 11*h.* 53*m.*

Sum ..... 15*h.* 09*m.*
Subtract 12*h.* ..... 12*h.* 0*m.*
Time of high water at Stranraer, *April* 6*th* .. 3*h.* 09*m.* p.m.

† *See note*, p. 168.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20–400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500–2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Cambrian, Ordovician and Silurian rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.–S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.–W. lines of hills and valleys, and some N.–S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R. *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of Life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene.* A minority of existing forms. *Miocene.* Approach to a balance of existing and extinct forms. *Pliocene.* A majority of existing forms. *Pleistocene.* A very large majority of existing forms. *Holocene.* Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period iceshects repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100–200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(*a*) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(*b*) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(*c*) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(*d*) A long interglacial phase with high sea level, but less high than during (*b*). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(*e*) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(*f*) An interglacial phase with fairly high sea level, less high than during (*d*). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(*g*) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(*h*) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, *i.e.*, was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937–41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Rhodesia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cro-Magnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillean and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (*see* p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnius).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365·2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (*e.g.* the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 $165\frac{8}{9}$, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini* 1961—*Anno Lucis* 5961. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: *e.g.* Regnal year 9 of the present Queen began on Feb. 6, 1960. The system is used for dating Acts of Parliament. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI and 1 Elizabeth II.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1752. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in *Scotland* was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365¼ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22. By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earlies tby the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The Lord Mayor was previously elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of

Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was fixed for Michaelmas Day in 1546, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1752. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28. The Lord Mayor is now presented to the Lord Chief Justice at the Royal Courts of Justice, on the second Saturday in November to make the final declaration of office, having been sworn in at Guildhall on the preceding day.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) *Cycle.*—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in *figures of gold* on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) *Cycle.*—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (*i.e.* about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June, July and August, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (*i.e.*, about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (*i.e.* about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1961 is MMDCCXIV (2714) A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days *before* the next coming point, the first *and* last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 183. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissextus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (*see* p. 181). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The *difference* between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A–G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

1963	Feb. 27	April 14	May 23	June 2	xxiv	Dec. 1
1964	Feb. 12	March 29	May 7	May 17	xxvi	Nov. 29
1965	March 3	April 18	May 27	June 6	xxiii	Nov. 28
1966	Feb. 23	April 10	May 19	May 29	xxiv	Nov. 27

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in *Lent*) can fall at earliest on February 4 and at latest on March 10.
Easter Day can fall at earliest on March 22 and at latest on April 25.
Ascension Day can fall at earliest on April 30 and at latest on June 3.
Whit Sunday can fall at earliest on May 10 and at latest on June 13.
Rogation Sunday is the Sunday next before *Holy Thursday* (Ascension Day).
Trinity Sunday is the Sunday next after *Whit Sunday*.
Corpus Christi falls on the Thursday next after *Trinity Sunday*.
There are not less than xxii and not more than xxvii *Sundays after Trinity*.
Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (*See* p. 183.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; *e.g.* 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Nicene Council (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, *e.g. Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be *the first Sunday after the second Saturday* in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, *e.g.* the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (*see also* p. 219) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyte Sonday because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (*born* 1118; *murdered* Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–25 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (*see Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

Thistle Sunday (*Scotland*) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and Abib was to be the first month of the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5721 (1960–61 A.D.) is the 2nd year of the 302nd *Metonic* (Minor or Lunar) *Cycle* of 19 years and the 9th year of the 209th *Solar* (or Major) *Cycle* of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 minims. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which

Tammuz	17	*Fast of Tammuz.
Ab	9	*Fast of Ab.

A.M. 5721 (known as 721 in the short system) is a Common Regular year of 12 months, 51 Sabbaths and 354 days.

A.M. 5722 (722) is an Embolismic Deficient year of 13 months, 54 Sabbaths and 383 days.

A.M. 5723 (723) is a Common Abundant year of 12 months, 51 Sabbaths and 355 days.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.
§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath

therefore control the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is *2h. 21m.* in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. Hejira years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the Hejira year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle, if the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1380 gives a quotient of 46 without remainder and is a common year. A.H. 1381, with remainder 1, is also a common year. A.H. 1382, with remainder 2, is *kabishah*.

Hejira Years 1380 and 1381

Name and Length of Month	A.H. 1380	A.H. 1381
Muharram (30)..	1960 June 26	1961 June 15
Saphar (29).....	July 26	July 15
Rabia I (30)	Aug. 24	Aug. 13
Rabia II (29)....	Sept. 23	Sept. 12
Jomada I (30)...	Oct. 22	Oct. 11
Jomada II (29)...	Nov. 21	Nov. 10
Rajab (30).....	Dec. 20	Dec. 9
Shaaban (29)....	1961 Jan. 19	1960 Jan. 8
Ramadân (30)...	Feb. 17	Feb. 6
Shawwâl (29)...	Mar. 19	Mar. 8
Dulkaada (30)...	April 17	April 6
Dulheggia (29 or 30).....	May 17	May 6

NOTE.—A.H. 1382 (*kabishah* year of 355 days) begins on 1962, June 4.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet, Hong Kong, Singapore, Malaya and elsewhere in South-East Asia.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games, The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1961 is, therefore, the year 2018 of the Vikrama Era.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1961 is 1883 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the

moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch	Meiji	from 1868 Oct. 13	to 1912 July 31
,,	Taishō	,, 1912 Aug. 1	to 1926 Dec. 25
,,	Shōwa	,, 1926 Dec. 26	

Hence the year Shōwa 36 begins 1961 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiyōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

EARTHQUAKES SINCE 1531

(Approximate numbers of persons killed appear in brackets.)

1531 Jan. 26	Portugal, Lisbon (30,000).
1556 Jan. 24	China, Shensi (830,000).
1693 Jan. 11	Catania (60,000).
1703 Dec. 30	Japan (200,000).
1731 Oct.–Nov.	China.
1737 Oct. 11	India, Calcutta (300,000).
1746	Peru.
1754 Sept. 2	Egypt, Cairo.
1755 Nov. 1	Portugal, Lisbon (60,000). Fire and tidal wave.
1783 Feb. 5–Mar. 28	Calabria (60,000). Followed until 1786 by further series of shocks (38 severe).
1811	Madrid.
1819	Kutch.
1822	Syria, Aleppo (20,000). Chile. Chile.
1835	
1857 Dec. 16	Naples, Salerno (12,000).
1859 Mar. 22	Ecuador, Quito.
1868 Aug. 13–15	Peru (25,000).
1883 July–Aug.	Italy, Ischia.
1886 Aug. 31	U.S.A., Charleston.
1891 Oct. 28	Japan, Mino Awari.
1895	Ljubljana (Laibach).
1895–1905	Japan. 257 earthquakes.
1896	Japan, Sanikro. Krakatoa, with volcanic disturbance.
1897 June 12	India, Assam.
1899	Alaska, Yakutat Bay.
1902	West Indies, Mont Pelée (20,000).
1905	India, Kangra (20,000).
1906 April 18	U.S.A., California. Large part of San Francisco destroyed.
Aug. 17	Chile, Valparaiso (2,500).
1907 Jan. 17	Jamaica, Kingston.
1908 Dec. 28	Italy, Messina (77,000).
1909	Persia, Luristan.
1911	Mexico.
1923 Sept. 1–1924 Jan. 15	Japan, Tokyo and Yokohama destroyed. Deaths 180,000; houses destroyed by fire, 447,128; by collapse, 128,266.
1926	Azores, Horta.
1927	Herzegovina and Dalmatia.
1927 Feb. 16	North Japan and Kamchatka.
Mar. 7	Japan, Tadjima.
July 11	Palestine.
1928 Dec.	Chile, Talca.
1930 July 23	Italy, Naples (2,142; injured 4,551).
1931 Mar. 31	Nicaragua, Managuao (Managua) destroyed.
Feb. 3	New Zealand.
1932 June 3	Mexico.
1933 Sept. 19	China.
1934 Jan. 21	Baluchistan, Quetta (Town destroyed).
1936	West Indies, Montserrat.
1937 June 2.	New Britain, Rabaul.
1938 April 19–20	Turkey, Anatolia.
1939 Jan. 26	Chile (20,000). Dec.–Feb. 1940. Turkey, Anatolia (30,000).
1950 May 21	Peru, Cuzco (100).
July 8–9	Colombia (270).
Aug. 15	India, Assam (1,500).
1951 May 6	Salvador (1,000).
1953 Mar. 18	Turkey (266).
Aug. 10	Greece, Ionian Islands (476).
Sept. 10	Cyprus, Paphos (40).
1954 April 30 and May 12	Greece, Thessaly (21).
Sept. 9	Algeria, Orleansville (1,409).
1956 June 10–17	Afghanistan (2,000).
Nov. 4	Persia, Luristan (350).
1957 April 24	Turkey, Fethiye (10).
May 26	Anatolia (26).
July 2–11	Persia, Sangchal (180).
July 28	Mexico (56).
Dec. 4	Mongolia (30).
Dec. 13	Persia, Kermanshah, Hamadan and Sanandraj (1,306). 29 villages destroyed, including Farsinaj (950).
1958 Aug. 16–21	Persia (191).
1960 Feb. 29	Morocco, Agadir. 12,000 killed in the total destruction of the town. Accompanied by a tidal wave.
April 25	Persia, Lar and Herash (3,000).
1960 May 21–25	Chile (5,000). Heavy destruction in Concepcion, Puerto Montt and on Chiloe Island. Accompanied by tidal waves and the eruption of 3 new volcanoes.

The World

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The Equatorial *Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365¼ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The population of the world in June, 1958, estimated by the *United Nations Statistical Yearbook*, 1959, is 2,852,000,000, an increase of 1·7 per cent. over 1957. Distribution by continents, with annual increase per cent., was:—

Continent	Area, Square Miles	Estimated Population, 1958 (millions)	Increase per cent.
Europe.....	2,085,000	417	0·7
Asia.....	18,685,000	1,592	1·8
Africa.....	11,699,000	230	1·8
America....	20,220,000	390	2·1
Oceania...	3,201,000	15·8	2·2
Total	196,836,000	2,852·0	1·7

A United Nations report (*The Future Growth of World Population*) in 1958, pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: in 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:— [millions]

Continent	1975		2000	
	Estimated Population	Per cent.	Estimated Population	Per cent.

World.....	3,828	100	6,267	100

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,737,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles. Other large areas are China, 4,135,000 sq. miles; the United States, with its Insular Jurisdiction, &c., 3,750,000 sq. miles; and Brazil 3,220,000 sq. miles.

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12′ N., to Cape Matapan, in the south of Greece, 36° 23′ N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30″ N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor. Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe, its extreme longitudes are 17° W. at Cape Verde and 51° 27′ 52″ E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 7⅓ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1⅓ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available.

With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939–1945 is a readjustment of boundaries which have not yet been definitely settled. For the constituent parts of the United Kingdom and for the area and population of separate departments, overseas provinces, etc., of foreign countries, see main articles.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°–60° E. long., *Middle East* (Baluchistan to Burma) 60°–100° E. long., *Far East* (Siam to Japan) 100°–160° long.

ROMAN EMPERORS

[The *First Triumvirate* (Julius Cæsar, Pompey and Crassus) 60–53 B.C.]

THE TWELVE CÆSARS

I. Caius JULIUS CÆSAR, *born* A.U.C. 651 (102 B.C.); *Dictator* A.U.C. 705 (48 B.C.); *Assassinated* A.U.C. 709. (44 B.C.).

[The *Second Triumvirate* (Octavian, Antony and Lepidus) 43–31 B.C.]

II. Caius Julius Cæsar Octavianus AUGUSTUS, *born* 63 B.C.; *Emperor* 27 B.C.; *Died* A.D. 14.
III. Claudius Nero Cæsar TIBERIUS, *born* 24 B.C.; *Emperor* A.D. 14; *Died* A.D. 37.
IV. Caius Cæsar CALIGULA, *born* A.D. 12; *Emperor* A.D. 37; *Assassinated* A.D. 41.
V. Tiberius Drusus CLAUDIUS, *born* 10 B.C.; *Emperor* A.D. 41; *Assassinated* A.D. 54.
VI. Claudius NERO, *born* A.D. 37; *Emperor* A.D. 54; *Suicide* A.D. 68.
VII. Servius Sulpicius GALBA, *born* 3 B.C.; *Emperor* A.D. 68; *Assassinated* A.D. 69.
VIII. Marcus Salvius OTHO, *born* A.D. 32; *Emperor* A.D. 69; *Suicide* A.D. 69.
IX. Aulus VITELLIUS, *born* A.D. 15; *Emperor* A.D. 69; *Assassinated* A.D. 69.
X. Titus Flavius VESPASIAN, *born* A.D. 9; *Emperor* A.D. 69; *Died* A.D. 79.
XI. Flavius Sabinus Vespasianus TITUS, *born* A.D. 48; *Emperor* A.D. 79; *Died* A.D. 81.
XII. Titus Flavius DOMITIAN, *born* A.D. 52; *Emperor* A.D. 81; *Assassinated* A.D. 96.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 35,948 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans

Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific	63,986,000	Off Philippines, 35,948
Atlantic	31,530,000	Porto Rico Trench, 30,143
Indian	28,350,000	Sunda Trench, 22,968
Arctic	5,541,600	17,850

Seas

Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Malay	3,137,000	Kei Trench, 21,342
Central American	1,770,170	Cayman, 23,000
Mediterranean	1,145,000	Matapan, 14,435
Bering	878,000	Buldir Trough, 13,422
Okhotsk	582,000	Kurile Trough, 11,154
East China	480,000	*about* 10,500
Hudson Bay	472,000	*about* 1,500
Japan	405,000	*about* 10,200
Andaman	305,000	*about* 11,000
North Sea	221,000	Skaggerak, 1,998
Red Sea	178,000	20° N., 7,254
Baltic	158,000	*about* 1,300

THE SEVEN WONDERS OF THE WORLD

I. The Pyramids of Egypt.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.

II. The Hanging Gardens of Babylon.—Adjoining Nebuchadnezzar's palace, 60 miles south of Baghdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.

III. The Tomb of Mausolus.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.

IV. The Temple of Diana at Ephesus.—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.

V. The Colossus of Rhodes.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.

VI. The Statue of Jupiter Olympus.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.

VII. The Pharos of Alexandria.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

THE LONGEST BRIDGES

(With length, in feet, of *waterway.*)

Lower Zambesi, Africa	11,322
Storsstromsbroen, Denmark	10,499
Tay Bridge, Scotland	10,289
Upper Sone, India	9,839
Godavari, India	8,881
Forth Bridge, Scotland	8,291
Rio Salado, Argentina	6,703
Golden Gate, San Francisco, U.S.A.	6,260
Rio Dulce, Argentina	5,866
Hardinge, India	5,384
Victoria Jubilee, Montreal	5,325
Moerdijk, Netherlands	4,698
Harbour, Sydney, N.S.W.	4,224
Jacques Cartier, Montreal	3,888
Queensborough, U.S.A.	3,720
Brooklyn, U.S.A.	3,451
Torun, Poland	3,291
Quebec Bridge, Quebec	3,205

PRINCIPAL HEIGHTS ABOVE SEA LEVEL

	Feet
Europe: Alps—Mont Blanc*	15,782
England: Scafell Pike	3,210
Wales: Snowdon	3,560
Scotland: Ben Nevis	4,406
Ireland: Carrantuohill	3,414
Asia: Everest	29,002
Africa: Kilimanjaro	19,340
North America: McKinley	20,320
South America: Aconcagua	22,976
Australia: Kosciusko	7,328
New Zealand: Cook	12,349
Oceania: Charles Louis	18,000

* The Caucasus being taken physically, if not politically, as in Asia.

THE LARGEST ISLANDS

Name of Island	Ocean	Area in Sq. miles
Greenland (Danish)	Arctic	827,300
New Guinea (Brit.-Neth.)	Pacific	347,450
Borneo (Brit.-Indonesian)	„	307,000
Baffin Land (Canadian)	Arctic	231,000
Madagascar	Indian	228,000
Sumatra (Indonesian)	Indian	163,000
Great Britain	Atlantic	88,745
Honshiu (Japanese)	Pacific	87,500
Celebes (Indonesian)	Indian	73,000
Prince Albert (Canadian)	Arctic	60,000
South Island, N.Z.	Pacific	58,500
Java (Indonesian)	Indian	48,400
North Island, N.Z.	Pacific	44,500
Cuba (Independent)	Atlantic	44,000
Newfoundland (Canadian)	„	42,750
Luzon (Philippines)	Pacific	41,000
Ellesmere (Canadian)	Arctic	41,000
Iceland (Independent)	Atlantic	40,000
Mindanao (Philippines)	Pacific	37,000
Ireland	Atlantic	32,600
Hokkaido (Japanese)	Pacific	30,000
Novaya Zemlya (Russian)	Arctic	30,000
Sakhalin (Russian)	Pacific	29,100
Haiti (Independent)	Atlantic	29,000
Tasmania (Australian)	Pacific	26,215
Ceylon	India	25,460
Banks (Canadian)	Arctic	25,000
North Devon (Canadian)	„	24,000
Melville Land (Canadian)	„	20,000

GREAT SHIP CANALS OF THE WORLD

Canal	Opened year	Length, miles	Depth, feet	Width,§ feet
Amsterdam (Netherlands)	1876	16½	23	88
Corinth (Greece)	1893	4	26·25	72
Elbe and Trave (Germany)	1900	41	10	72
Gota (Sweden)*	1832	115	10	47

WATERFALLS OF THE WORLD

In order of height

Fall	Locality	Height in Feet
Angel Falls	Venezuela	3,212
Ribbon Fall	Yosemite, U.S.A.	1,612
Upper Yosemite	Yosemite, U.S.A. (*a*)	1,430
Gavarnie	Pyrenees	1,385
Wollomombie	New South Wales. (*b*)	1,100
Staubbach	Switzerland	980
Vettisfoss	Norway	856
King Edward VIII.	British Guiana	840
Gersoppa	Mysore, India (*c*)	830
Sutherland	New Zealand (*d*)	815
Kaietur (Köitutök)	British Guiana	741
Kalambo	Tanganyika (*e*)	704
Maletsunyane	Basutoland	630
Bridalveil	Yosemite, U.S.A.	620
Nevada	Yosemite, U.S.A.	594
Skjeggedalsfoss	Norway	525
Sterling	New Zealand	505

In order of volume

Fall	Locality	Width in Yards
Khon Cataracts (1)	Indo-China	15,840
Guayra (2)	Brazil	5,300
Victoria (3)	Rhodesia	1,760
Niagara (4)	Canada—U.S.A.	1,200

On the basis of annual flow the Guayra Falls in Brazil are the most spectacular, with a flow of 470,000 cubic feet per second (annual average).

NOTES.—(*a*) Out of a total fall of 2,565 ft.; (*b*) 1,700 ft.; (*c*) 960 ft.; (*d*) 1,904 ft.; (*e*) 3,000 ft.
(1) Height, 50–70 ft.; (2) 90–130 ft.; (3) 236–354 ft.; (4) 158–175 ft.

Ariberg	Austria	6	650
Moffat	United States	6	200
Shimizu	Japan	6	70

DISTANCE OF THE HORIZON

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is
5 ft.	2·9 miles
20 ,,	5·9 ,,
50 ,,	9·3 ,,
100 ,,	13·2 ,,
500 ft.	29·5 miles
1,000 ,,	41·6 ,,
2,000 ,,	58·9 ,,
3,000 ,,	72·1 ,,
4,000 ft.	83·3 miles
5,000 ,,	93·1 ,,
20,000 ,,	186·2 ,,

BRITISH EMBASSIES ABROAD

Ambassadors. *Style*, His Excellency; *Addressed as*, Your Excellency.

Embassies:	*Ambassadors*	*Embassy*
Afghanistan	M. C. Gillett, C.M.G. (1957)	*Kabul.*
Argentine	Sir J. Ward, K.C.M.G. (1957)	*Buenos Aires.*
Austria	Sir R. J. Bowker, K.C.M.G. (1958)	*Vienna.*
Belgium	Sir J. W. Nicholls, K.C.M.G., O.B.E. (1960)	*Brussels.*
Bolivia	L. G. Holliday, C.M.G. (1960)	*La Paz.*
Brazil	Sir G. A. Wallinger, K.C.M.G. (1958)	*Rio de Janeiro.*
Burma	Sir R. H. S. Allen, K.C.M.G. (1956)	*Rangoon.*
Cambodia	F. F. Garner, C.M.G. (1958)	*Phnom Penh.*
Cameroons	P. M. Johnston (1960)	*Yaoundé.*

Paul Doumer (assass.: 7 May, 1932)	13 June, 1931
Albert Lebrun (deposed 1940)	10 May, 1932
Maréchal Pétain, "Vichy" nominee	11 July, 1940

[After the liberation of Paris, General Charles de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault.

A new Constitution (*Fourth Republic*), adopted on Oct. 13, 1946, and amended in 1954, was in force until 1958.]

Vincent Auriol, *born* 1884	Jan. 16, 1947
René Coty, *born* 1882	Jan. 17, 1954

[The *Fifth French Republic* came into being on October 6, 1958, following the approval of its constitution by a national referendum in September, 1958.]

Charles de Gaulle, *born* 1890	Jan. 8, 1959

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958.

INDEPENDENT PRINCES, A.D. 844 to 1282

Rhodri the Great	844–878
Anarawd, son of Rhodri	878–916

Residences.—Clarence House, St. James's, S.W.1.; Castle of Mey, Caithness, Scotland.

SISTER OF HER MAJESTY

H.R.H. PRINCESS MARGARET ROSE, C.I., G.C.V.O., Colonel-in-Chief, 15th–19th The King's Royal Hussars, 1st East Anglian Regiment (Royal Norfolk and Suffolk), The Royal Highland Fusiliers (Princess Margaret's Own Glasgow and Ayrshire Regiment), Queen Alexandra's Royal Army Nursing Corps, Women's Royal Australian Army Corps, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame Grand Cross of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; *born* at Glamis Castle, Angus, Scotland, Aug. 21, 1930; *married* May 6, 1960, Antony Charles Robert Armstrong-Jones, son of Ronald Armstrong-Jones, Q.C. and the Countess of Rosse.

Residence.—Kensington Palace, W.8.

ORDER OF SUCCESSION TO THE THRONE

The Queen's sons and daughter are in the order of succession to the throne, and after the Princess Margaret, the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal, her elder son and his sons, and her younger son and his son; then The Duke of Fife, son of the late Countess of Southesk; then King Olav of Norway and his children; then the children of the second

daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alexandra of Hohenlohe-Langenburg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

Precedence in England

The Sovereign.

The Prince Philip, Duke of Edinburgh

The Prince of Wales.

The Duke of Gloucester.

The Duke of Windsor.

Archbishop of Canterbury.

Lord High Chancellor.

Archbishop of York.

The Prime Minister.

Lord President of the Council.

Speaker of the House of Commons.

Lord Privy Seal.

High Commissioners of Commonwealth Countries and Ambassadors of Foreign States.

Dukes, according to their Patents of Creation:

(1) Of England; (2) of Scotland; (3) of Great Britain; (4) of Ireland; (5) those created since the Union.

Ministers and Envoys.

Eldest sons of Dukes of Blood Royal.

Marquesses, in same order as Dukes.

Dukes' eldest Sons.

Earls, in same order as Dukes.

Younger sons of Dukes of Blood Royal.

Marquesses' eldest Sons.

Dukes' younger Sons.

Viscounts, in same order as Dukes.

Earls' eldest Sons.

Marquesses' younger Sons.

Bishops of London, Durham and Winchester.

All other English Bishops, according to their seniority of Consecration.

Secretaries of State, if of the degree of a Baron.

Barons, in same order as Dukes.

Treasurer of H.M.'s Household.

Comptroller of H.M.'s Household.

Vice-Chamberlain of H.M.'s Household.

Secretaries of State under the degree of Baron.

Viscounts' eldest Sons.

Earls' younger Sons.

Barons' eldest Sons.

Knights of the Garter if Commoners.

Privy Councillors if of no higher rank.

Chancellor of the Exchequer.

Chancellor of the Duchy of Lancaster.

Lord Chief Justice of England.

Master of the Rolls.

President of the Probate Court.

The Lords Justices of Appeal.

Judges of the High Court.

Vice-Chancellor of County Palatine of Lancaster.

Viscounts' younger Sons.

Barons' younger Sons.

Sons of Life Peers.

Baronets of either Kingdom, according to date of Patents.

Knights of Thistle and St. Patrick if Commoners.

Knights Grand Cross of the Bath.

Members of the Order of Merit.

Knights Grand Commanders of the Star of India.

Companions of Honour.

Knights Commanders of the above Orders.

Knights Bachelor.

Official Referees of The Supreme Court.

Judges of County Courts and Judges of the Mayor's and City of London Court.

Serjeants at law.

Masters in Lunacy.

Companions and Commanders, *e.g.* C.B.; C.S.I.; C.M.G.; C.I.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th); O.B.E.; I.S.O.

Eldest Sons of younger Sons of Peers.

Baronets' eldest Sons.

Eldest Sons of Knights in the same order as their Fathers.

M.V.O. (5th); M.B.E.

Younger Sons of the younger Sons of Peers.

Baronets' younger Sons.

Younger Sons of Knights in the same order as their Fathers.

Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedency as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross and Dames Commanders, *see* pp. 294–5.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—*See* p. 684.

The Queen's Household

Lord Chamberlain, The Earl of Scarbrough, K.G., P.C., G.C.S.I., G.C.I.E., G.C.V.O., T.D.

William IV.....June	26, 1830	Sept. 8, 1831
Victoria.....June	20, 1837	June 28, 1838
Edward VII....Jan.	22, 1901	Aug. 9, 1902
George V.....May	6 1910	June 22 1911
Edward VIII...Jan.	20, 1936	..
George VI.....Dec.	11, 1936	May 12, 1937
Elizabeth II....Feb.	6, 1952	June 2, 1953

THE QUEEN'S BIRTHDAY, 1961

The date for the observance of the Queen's Birthday in 1961, both at home and abroad, will be Saturday, June 10. For the Customs and Excise Department, and the officers and servants of the dock companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 24.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000
Salaries of Household	185,000
Expenses of Household	121,800
Royal Bounty, alms and special services	13,200
Supplementary Provision	95,000
	£475,000

Queen Elizabeth the Queen Mother ..	£70,000
The Duke of Edinburgh	40,000
The Duke of Gloucester	35,000
The Princess Margaret	15,000
The Princess Royal	6,000

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.
February 19 (1960).—Birthday of Prince Andrew.
March 31 (1900).—Birthday of Duke of Gloucester.
April 21 (1926).—Birthday of Her Majesty the Queen.
April 23.—St. George's Day (in England only), with the Flag of St. George inferior.
April 25 (1897).—Birthday of the Princess Royal.
May 24.—Commonwealth Day.
June 2 (1953).—Coronation Day.
June 10 (1921) Birthday of the Duke of Edinburgh.
June 10.—Queen's Official Birthday, 1961.
Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.
Aug. 15 (1950).—Birthday of the Princess Anne.
Aug. 21 (1930).—Birthday of the Princess Margaret.
Nov. 12.—Remembrance Sunday, 1961.
Nov. 14 (1948).—Birthday of the Prince of Wales.
Nov. 20 (1947).—Her Majesty's Wedding Day.

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, *e.g.* on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(*a*) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(*b*) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(*c*) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(*d*) The funerals of Prime Ministers and ex-Prime Ministers of the United Kingdom.

(*e*) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (*a*) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (*b*) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1961.

,, 11. Lord Mayor's Day.
,, 14. Birthday of the Prince of Wales.
,, 30. St. Andrew.
Dec. 21. St. Thomas.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coatee with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.

Governor, Maj.-Gen. Edmund Hakewill Smith, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Lt.-Colonel L. W. La T. Cockcraft, D.S.O., M.V.O.; Colonel J. A. Fraser, D.S.O., O.B.E., D.C.M.; Lt.-Colonel J. M. Mackenzie, D.S.O.; Lt.-Colonel L. Holbech, C.V.O., D.S.O., O.B.E., M.C.; Lt.-Colonel F. C. Hitchcock, O.B.E., M.C.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Lt.-Colonel E. P. O. Boyle, M.V.O.

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1898 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament; and from the date of the Union with Ireland 28 Irish Peers were so elected for life; the number of the latter is now reduced to one, and the 27 vacancies are unlikely to be filled.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example.

No Fees for Dignities have been payable since 1937.

PEERAGES CREATED SINCE THE LAST ISSUE

VISCOUNTS (5)—Dunrossil; Head; Rochdale; Slim; Stuart of Findhorn.
BARONS (6)—Gladwyn; Howick of Glendale; MacAndrew; Morris of Borth-y-Gest (Life Peerage); Nelson of Stafford; Sanderson of Ayot.
For Life Peers created under the Life Peerages Act, 1958, see p. 247.

PEERAGES EXTINCT SINCE THE LAST ISSUE

MARQUESSATE (1)—Carisbrooke (cr. 1917).
VISCOUNTCY (1)—Cilcennin (cr. 1956).
BARONIES (2)—Ammon (cr. 1944); Glyn (cr. 1953).

PEERS WHO ARE MINORS

(As at Jan. 1, 1961)

THE PRINCE OF WALES (Duke of Cornwall) (*b.* 1948).
EARLS (3): Belmore (*b.* 1951); Chichester (*b.* 1944); Kingston (*b.* 1943).

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

COUNTESSES IN THEIR OWN RIGHT.—*Style*, The Countess of ——
Addressed as, My Lady.

Created.	*Title, Name, etc.*	*Eldest Son or Heir.*
1861	*Cromartie*, Sibell Lilian Mackenzie, *b.* 1878, *s.* 1895, *w.*	Viscount Tarbat, M.C., *b.* 1904.

1959 *Morrison of Lambeth*, Herbert Stanley Morrison, P.C., C.H., *b.* 1888, *m.*
1959 *Plowden*, Edwin Noel Plowden, K.C.B., K.B.E., *b.* 1907, *m.*
1959 *Robbins*, Lionel Charles Robbins, C.B., F.B.A., *b.* 1898, *m.*
1958 *Shackleton*, Edward Arthur Alexander Shackleton, O.B.E., *b.* 1911, *m.*
1959 *Shawcross*, Hartley William Shawcross, P.C., Q.C., *b.* 1902, *m.*
1958 *Stonham*, Victor John Collins, O.B.E., *b.* 1903, *m.*
1958 *Stopford of Fallowfield*, John Sebastian Bach Stopford, K.B.E., F.R.S., *b.* 1888, *m.*
1958 *Taylor*, Stephen James Lake Taylor, M.D., *b.* 1910, *m.*
1958 *Twining*, Edward Francis Twining, G.C.M.G., M.B.E., *b.* 1899, *m.*

BARONESSES

1958 *Elliot of Harwood*, Katharine Elliot, D.B.E., *b.* 1903, *w.*
1959 *Horsbrugh*, Florence Gertrude Horsbrugh, P.C., G.B.E., *b.* 1889.
1958 *Ravensdale of Kedleston*, see Baronesses in their own Right, "Ravensdale", p. 244.
1958 *Swanborough*, Stella, Dowager Marchioness of Reading, G.B.E., *w.*
1958 *Wootton of Abinger*, Barbara Frances Wright, *b.* 1897, *m.*

Courtesy Titles (*in actual use in* 1961)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" *is the heir to the* Dukedom of Marlborough *and the* "Earl of Aboyne" *to the* Marquessate of Huntly, *and* "Viscount Acheson" *heir to the* Earldom of Gosford; **the titles of second heirs are also given*; *e.g.* Viscount Savernake, *eldest son of the* "Earl of Cardigan" *heir to the* Marquessate of Ailesbury.

∴ *In addition to these Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled* "The Master of ——" *e.g.* "The Master of Falkland," *eldest son of* Viscount Falkland.

Worsley—*Yarborough*

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—S. or I. appended to the date of creation denotes a *Scottish* or *Irish* title, the further addition of a * implies that the Peer in question holds also an *Imperial* title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. R. indicates that the Peer is a representative peer for Scotland or Ireland. The mark ° signifies that there is no " of " in the Marquessate or Earldom so designated; *b.* signifies born; *s.*, succeeded; *m.*, married; *w.*, widower or widow; *M.*, minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, *e.g.*, the Judicial Committee, the Board of Trade, *q.v.* The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this

prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. ——. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) ——, P.C., or, less elaborately, The Lord (or Earl or Viscount) —— P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence)

Victoria Cross.—1856.—*V.C.* *See* pp. 296-9.

O.M.Mil.

THE ORDER OF MERIT (1902)—O.M.

Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

O.M.Civ.

Professor George Macaulay Trevelyan, 1930.

WOMEN.

Astor, Nancy, Viscountess, 1937.
Nicolson, Hon. Lady, 1948.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since 1902. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moire ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

Princess Wilhelmina of the Netherlands.

SECOND CLASS.

H.R.H. the Princess Alice, Countess of Athlone.
H.R.H. the Princess Alfonso d'Orleans-Bourbon (the Infanta Beatrix of Spain).
Lady Victoria Patricia Helena Ramsay.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

H.M. THE QUEEN, 1947.
H.M. Queen Elizabeth the Queen Mother, 1931.
H.R.H. the Princess Margaret, 1947.
H.R.H. the Princess Royal, 1919.
H.R.H. the Duchess of Gloucester, 1937.
H.R.H. the Duchess of Kent, 1937.
H.H. Maharani Sahab Chimna Bai Gaekwar of Baroda, 1892.
Lady Victoria Patricia Helena Ramsay, 1911.
Margaret Etienne Hannah, Marchioness of Crewe, 1911.
Dorothy Evelyn Augusta, Countess of Halifax, 1926.
Pamela, Countess of Lytton, 1927.
H.H. Maharani Regent of Travancore, 1929.
Doreen Maud, Marchioness of Linlithgow, 1936.
Doreen Geraldine, Dowager Baroness Brabourne, 1937.
Eugenie Marie, Countess Wavell, 1943.
Florence Amery, 1945.
H.H. Maharani Tara Devi of Jammu and Kashmir, 1946.
Agnes Anne, Baroness Clydesmuir, 1948.

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets of England, Great Britain, U.K. (and Ireland marked I.).

Badge of Baronets of Scotland or Nova Scotia (marked S.).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, *at the time of going to press*, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ( ).

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert *A*—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady *A*—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary *A*—"; if daughter of a Viscount or Baron "The Hon. Lady *A*—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir —— (first or Christian name) and in writing as "Sir A—— B——." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Hon. Sir George Bellew, K.C.V.O., Garter King of Arms; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Mrs. Rodney; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 18, 1960)

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Baronetcies Created—

Barber; Butcher; Gillett; Kaberry; Lloyd; Nugent of Dunsfold; Ross; Stewart of Strathgarry; Storey; Vaughan-Morgan; Walker-Smith.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, *e.g.* "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, *e.g.* "The Countess of ——, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

Sir Roger Makins.

G.C.M.G.
Sir Kenneth Roberts-Wray.
Sir Christopher Steel.

G.B.E. (Military)
Admiral Sir Gerald Gladstone.
General Sir Cecil Sugden.

G.B.E. (Civil)
Lord Cottesloe.
Lieut.-Gen. Sir Ian Jacob.
Sir Ivo Mallet.

K.C.B. (Military)
Vice-Adm. D. E. Holland-Martin.
Lieut.-Gen. C. P. Jones.
Air Marshal W. H. Kyle.
Vice-Adm. J. D. Luce.
Lieut.-Gen. Sir Rodney Moore.
Air Marshal H. D. McGregor.
Lieut.-Gen. I. H. Riches, R.M.
Vice-Adm. W. J. W. Woods.

K.C.B. (Civil)
L. J. Dunnett.
F. C. Francis.
A. J. Sims.

K.C.M.G.
R. H. S. Allen.
M. J. Cresswell.
P. M. Crosthwaite.
Hon. Humphrey Gibbs.
Viscount Hood.
Sir Philip Morris.
G. W. Nye.
R. W. Parkes.
A. M. W. Rae.
H. A. F. Rumbold.
A. W. Snelling.
Sir Dick White.
Sir Evelyn Wrench.

K.C.V.O.
R. M. J. Harris.
I. W. Magill.

K.B.E. (Military)
Vice-Adm. W. K. Edden.
Instructor Rear-Adm. J. Fleming.
Vice-Adm. L. A. B. Peile.
Maj.-Gen. W. G. Roe.
Air Vice-Marshal C. A. Rumball.
Air Marshal H. D. Spreckley.
Maj.-Gen. H. H. C. Sugden.
Maj.-Gen. N. P. H. Tapp.
Lieut.-Gen. G. S. Thompson.
Air Vice-Marshal G. L. Worthington.

K.B.E. (Civil)
R. E. Alford.
A. A. T. Balewa.
Air Vice-Marshal W. A. B. Bowen-Buscarlet.
Robert Cockburn.
Lord Forbes.
G. W. Furlonge.
J. R. Farquharson.
R. J. P. Harvey.
Brig. H. W. Houldsworth.
C. R. King.
Maj. E. A. H. Legge-Bourke, M.P.
Maj. C. B. Ormerod.
Sir Richard Pim.
E. J. Seward.
Sir Ambrose Sherwill.

Rear-Adm. Sir Matthew Slattery.
J. P. Summerscale.

D.B.E. (Military)

Commandant E. L. E. Hoyer-Millar.
Air Commandant Alice Lowrey.

D.B.E. (Civil)

Mrs. Barbara Brooke.
Miss Flora Robson.

KNIGHTS BACHELOR

R. S. Aitken.
Prof. H. W. Bailey.
R. P. Baulkwill.
J. M. Bemrose.
Frank Bower.
A. F. Bradbeer.
J. D. K. Brown.
R. F. Burnand.
Sik-nin Chau.
W. E. Chiesman.
Prof. A. M. Claye.
Harold Clowes.
E. McN. Cooper-Key, M.P.
Brig. M. H. Cox.
G. B. Craddock, M.P.
R. A. W. Dent.
Prof. D. M. Dunlop.
Prof. J. G. Edwards.
Lieut.-Col. Timothy Fetherston-haugh.
A. G. Forbes.
Myer Galpern, M.P.
W. H. Glanville.
Col. D. Glover, M.P.
John Hammond.
Thomas Hargreaves.
T. W. Harley.
C. H. Hartwell.
R. H. Hollis.
R. A. Hornby.
P. L. Hunting.
R. H. Jessel.
E. M. Keatinge.
Joseph Latham.
D. T. Llewellyn.
J. F. Lockwood.
Hamilton Macaulay.
M. McL. McCulloch.
W. H. McFadzean.
Cdr. J. F. W. Maitland, M.P.
A. J. Mamo.
Prof. H. S. W. Massey.
H. G. Massiah.
R. P. Morison, Q.C.
M. C. E. C. Nageon de Lestang.
Thomas Neame.
C. R. Niven.
Odumegwu Ojukwu.
D. M. Oppenheim.
The Olowo of Owo.
K. T. Parker.
R. E. Perring.
Colin Raeburn.
Maj.-Gen. G. T. Raikes.
A. B. Rennie.
J. S. Richardson.
B. W. Rycroft.
S. I. Salmon.
B. F. J. Schonland.
T. V. Scrivenor.
T. M. Shankland.
G. E. Sinclair.
Andrew Smith.
Basil Spence, R.A.
L. E. Stephens.
A. M. Stuart.
G. B. B. M. Sutherland.
H. G. Thornton.
J. B. Townley.
C. F. Trustam.
E. G. Tucker.
W. H. L. Urton.
W. D. Vernon.
A. B. Waring.
A. T. Weatherhead.
D. L. Webster.
F. J. West.
G. F. Williams.
Ralph Windham.
Col. W. H. Wynne Finch.

THE VICTORIA CROSS, *VC*

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th*, 1856.

The *VC* is worn before all other decorations, on the left breast, and consists of a cross-pattee of bronze, 1½ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." Holders of the *VC* receive a tax-free annuity of £100, irrespective of need or other conditions. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, G.C.

The ribbon is *dark blue* threaded through a bar adorned with laurel leaves

FOR GALLANTRY

INSTITUTED *September 24th*, 1940 (with amendments, *November 3rd*, 1942)

The George Cross is worn before all other decorations (except the VC) on the left breast § and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon 1¼ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939.

THE GRAND PRIORY IN THE BRITISH REALM OF THE MOST VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907, 1926, 1955 and 1958), St. John's Gate, Clerkenwell, E.C.1.

Sovereign Head .....H.M. the Queen.

Grand Prior.....H.R.H. The Duke of Gloucester, K.G., P.C., K.T., K.P., G.M.B., G.C.M.G., G.C.V.O.

Lord Prior.....The Lord Wakehurst, K.C.M.G.

The Order had its origin in Jerusalem where a hospice for the relief of Christian pilgrims was founded in the eleventh century. Initially a monastic order, it later became militarized and its Knights fought alongside the Crusaders against the spread of Islam. After the loss of the Holy Land, the Order became sovereign in Rhodes and then in Malta. Like other ancient Orders of Chivalry, the Order of St. John was represented in most European countries, though its Priories in England and Scotland were dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798 and the Grand Magistracy eventually settled in Rome.

In 1827 the Knights of France, with the authority of the Grand Magistracy, assisted in the revival of what is now the Grand Priory in the British Realm of the Most Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at St. John's Gate, the surviving gatehouse of the former Priory of England in Clerkenwell. A Royal Charter was granted to the Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a white eight-pointed cross, embellished in alternate angles with a lion and an unicorn; the riband is of black watered silk. By a Royal Charter of March 15, 1955, members are divided into six grades:—(1) Bailiffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; (5) Serving Brothers and Sisters; and (6) Esquires. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, title or precedence.

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is concerned with education in First Aid and kindred subjects; and the St. John Ambulance Brigade, the main object of which is to provide trained personnel for attendance on the public where the rendering of First Aid may be required.

Prelate—His Grace the Archbishop of Canterbury.
Chancellor—Lieut.-Gen. Sir Henry Pownall, K.C.B., K.B.E., D.S.O., M.C.
Vice-Chancellor—H. F. Parshall, T.D.
Secretary-General—C. T. Evans, C.M.G.
Director-General, St. John Ambulance Association—Sir Philip Southwell, M.C.
Receiver-General—L. G. Whyte.
Hospitaller—Brig. Sir Stewart Duke-Elder, G.C.V.O., M.D., F.R.S.
Almoner—Sir Gerald Creasy, K.C.M.G., K.C.V.O., O.B.E.
Librarian—Major R. Williams, F.S.A.
Registrar—Sir Harry Luke, K.C.M.G., D.Litt., LL.D.
Genealogist—The Hon. Sir George Bellew, K.C.V.O.
Director of Ceremonies—Maj. A. Urquhart, D.S.O.
Commissioner-in-Chief, St. John Ambulance Brigade—Maj.-Gen. J. M. Kirkman, C.B., C.B.E.

CLUB AND LIBRARY EDITION OF WHITAKER, 1961

The Club and Library Edition of Whitaker's Almanack, 1961, contains 1,206 pages, including illustrations and coloured maps (The World, The British Isles, Baltic States, Russia and her neighbours, Germany and her neighbours, France and Spain, The Far East, India, Pakistan and Burma, Africa, Canada and Newfoundland, The United States, South America, Australia, New Zealand) in strong leather binding, with gilt top and silk headband. Price 37*s.* 6*d.* net.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons, and for 23 *Parliamentary Secretaries* of whom not more than 21 may be members of the House of Commons and not fewer than 2 of the Lords.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000.

THE PRINCIPAL PARTIES IN PARLIAMENT

(1900–1959)

General Election	Conservative and Unionist	Liberal	Labour
1900.....	402	185	11

NOTES.—(*a*) Including 48 Non-Coalition Unionists. (*b*) Including 28 Non-Coalition Liberals. (*c*) Including 63 Non-Coalition Labour. (*d*) Liberal National 59; Liberal 59. (*e*) Liberal National 35 (Simon); Liberal 33 (Samuel); 4 (Lloyd George). (*f*) National Labour 13 (MacDonald); Labour 52 (Henderson). (*g*) Liberal National 33; Liberal 21. (*h*) National Labour 8; Labour 154; I.L.P. 4. (*i*) Liberal National 13. Liberal 12. (*j*) Labour 393; I.L.P. 3. (*k*) Incl. Nat. Liberal. (*l*) Irish Nationalists (2) and Speaker make total of 625. (*m*) Including associates. (*n*) Sinn Fein (2) and Speaker make total of 630. (*o*) Independent (1) makes total of 630.

Conservatives and associates have subsequently gained one seat from Labour at a by-election.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—*see* "Committees," pp. 312–3). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's Canadian tour in 1959, the Councillors of State were Queen Elizabeth the Queen Mother, Princess Margaret, the Duke of Gloucester, the Duke of Kent and Princess Alexandra.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. The Regency Act, 1953, has designated the Duke of Edinburgh as Regent, should a Regency become necessary during the minority of the children of her present Majesty.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679–80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusioners who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *toraidhe* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679–80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688–1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendency in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951, 1955 and 1959 Elections.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a five-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,750; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant*

do.) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl St. Aldwyn), the Captain of the Queen's Bodyguard and the Yeomen of the Guard (The Earl of Onslow) and the (Political) Lords in Waiting (Earl Bathurst and Lord St. Oswald).

The *Labour Whips* are: The Earl of Lucan (*Chief Whip*); The Lords Burden, Kershaw and Haden-Guest.

The *Liberal Whip* is The Lord Amulree.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* are: H. W. Bowden (*Chief Whip*); J. Taylor; G. H. R. Rogers; E. W. Short; J. D. Cronin; C. A. Howell; G. Darling; G. M. Lawson; A. R. Probert; S. Irving; E. C. Redhead; S. Mahon.

The *Liberal National Whip* is Sir Herbert Walter Butcher, Bt.

The *Liberal Whip* is D. W. Wade.

SCOTTISH REPRESENTATIVE PEERS

(Elected at the Palace of Holyroodhouse, Oct, 1959).

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland specially convened for that purpose.

Duke of Atholl.	Lord Forbes.
Earl of Caithness.	Lord Saltoun.
Earl of Perth.	Lord Sempill.
Earl of Haddington	Lord Balfour of
Earl of Airlie.	Burleigh.
Earl of Selkirk.	Lord Fairfax of
Earl of Mar and Kellie.	Cameron.
Earl of Northesk.	Lord Polwarth.
Earl of Dundonald.	Lord Sinclair.

IRISH REPRESENTATIVE PEERS

No further elections have been held since the establishment of the Irish Free State in 1920.

Peer	*Date of Election*
Earl of Kilmorey	Feb. 14, 1919

(And 27 vacancies.)

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660. Sir H. Grimston.
1661. Sir E. Turner.
1673. Sir J. Charlton.
1673. Edwd. Seymour.
1678. Sir Robt. Sawyer.
1679. Serjeant William Gregory.
1680. W. Williams.
1685. Sir John Trevor.
1688. H. Powle.
1694. Paul Foley.
1698. Sir T. Lyttleton.
1700. Robert Harley (*Earl of Oxford and Mortimer*).
1702. John Smith.

PARLIAMENT OF GREAT BRITAIN.

1708 Sir Richard Onslow (*Lord Onslow*).
1710. Wm. Bromley.
1713. Sir Th. Hanmer.
1715. Spencer Compton (*Earl of Wilmington*).
1727. Arthur Onslow.
1761. Sir John Cust.
1770. Sir F. Norton.
1780. C. W. Cornwall.
1788. Hon. W. Grenville (*Lord Grenville*).
1789. Henry Addington (*Viscount Sidmouth*).

PARLIAMENT OF UNITED KINGDOM.

1801. Sir John Mitford (*Lord Redesdale*).
1802. Charles Abbot (*Lord Colchester*).
1817. Charles M. Sutton (*Viscount Canterbury*).
1835. James Abercomby (*Lord Dunfermline*).
1839. Charles Shaw-Lefevre (*Viscount Eversley*).
1857. J. Evelyn Denison (*Viscount Ossington*).
1872. Sir H. W. B. Brand (*Viscount Hampden*).
1884. Arthur Wellesley Peel (*Viscount Peel*).
1895. William Court Gully (*Viscount Selby*).
1905. James W. Lowther (*Viscount Ullswater*).
1921. John Henry Whitley.
1928. Hon. Edward Algernon FitzRoy.
1943. Col. D. Clifton Brown (*Viscount Ruffside*).
1951. William Shepherd Morrison (*Viscount Dunrossil*).
1959. Sir Harry Hylton-Foster.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Twenty-four women were elected at the 1959 Election (12 Labour, 11 Conservative and 1 Ulster Unionist), 2 fewer than at the Dissolution.

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

Deposits forfeited at the 1959 Election totalled 116, 16 more than in 1951. Deposits were lost by 55 Liberal candidates, 17 Communists, 14 Welsh Nationalists, 7 Sinn Fein, 3 Scottish Nationalists, 2 Conservatives, 1 Labour and 17 others. Seventeen out of 18 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits was lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker.
President, The Rt. Hon. Harold Macmillan, M.P.
Vice-Presidents, The Viscount Stansgate, D.S.O., D.F.C.; The Marquess of Salisbury, K.G.; The Earl of Scarbrough, K.G.; The Rt. Hon. J. S. B. Lloyd, C.B.E., T.D., Q.C., M.P.; The Rt. Hon. H. T. N. Gaitskell, C.B.E., M.P.; The Rt. Hon. Clement Davies, Q.C., M.P.
Chairman, J. D. R. T. Tilney, T.D., M.P.
Secretary, Maj-Gen. W. A. Dimoline, C.B., C.M.G., C.B.E., D.S.O. M.C.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" in 1911, Its object was, then as now, to facilitate the exchange of information, closer understanding and more frequent intercourse between those engaged in the parliamentary government of the Commonwealth. In 1949, the Association was reorganized as the Commonwealth Parliamentary Association, and a General Council was instituted as the governing body.

The Association now consists of nine main branches in the Parliaments of the self-governing countries of the Commonwealth—the United Kingdom, Canada, Australia, New Zealand, South Africa, India, Ceylon, Ghana, and the Federation of Malaya—and four auxiliary branches, in the Parliaments of the Federation of Rhodesia and Nyasaland, the Federation of Nigeria, the Federation of the West Indies, and Singapore. There are also branches in State, Provincial and Territorial Legislatures, as well as in the Parliaments of Northern Ireland, the Isle of Man, and the States of Jersey. In addition, there are thirteen affiliated branches in Legislatures of those Commonwealth countries which are not completely self-governing, making a total of 67 branches. The branches in Pakistan and Malta are at present in abeyance. Commonwealth Parliamentary Conferences and General Meetings are held in alternate years and meetings of the General Council every year, in different countries of the Commonwealth.

Chairman of the General Council, Hon. Sir Alister McMullin, K.C.M.G. (President of the Senate, Commonwealth of Australia).
Secretary-General and Editor of Publications, S. A. Pakeman, C.B.E., M.C., E.D. (*Acting*), Houses of Parliament, S.W.1.
Secretary, United Kingdom Branch, R. V. Vanderfelt, O.B.E., Westminster Hall, Houses of Parliament, S.W.1.

Her Majesty's Ministry

(As reconstructed in Oct. 1959 and July 1960)

Prime Minister and First Lord of the Treasury, THE RT. HON. HAROLD MACMILLAN, M.P., *born* Feb. 10, 1894.
Secretary of State for Foreign Affairs, The Rt. Hon. The Earl of Home, *born* July 2, 1903.
Chancellor of the Exchequer, The Rt. Hon. (John) Selwyn (Brooke) Lloyd, C.B.E., T.D., Q.C., M.P., *born* July 28, 1904.
Lord President of the Council, Minister for Science and Leader of the House of Lords, The Rt. Hon. Viscount Hailsham, Q.C., *born* Oct. 9, 1907.
Lord High Chancellor, The Rt. Hon. Viscount Kilmuir, G.C.V.O., *born* May 29, 1900.
Lord Privy Seal, The Rt. Hon. Edward Richard George Heath, M.B.E., M.P., *born* July 9, 1916.
Secretary of State for the Home Department and Leader of the House of Commons, The Rt. Hon. Richard Austen Butler, C.H., M.P., *born* Dec. 9, 1902.
Secretary of State for Commonwealth Relations, The Rt. Hon. Duncan Sandys, M.P., *born* Jan. 24, 1908.
Secretary of State for the Colonies, The Rt. Hon. Iain Norman Macleod, M.P., *born* Nov. 11, 1913.
Secretary of State for Scotland, The Rt. Hon. John Scott Maclay, C.M.G., M.P., *born* Oct. 26, 1905.
Minister of Labour, The Rt. Hon. John Hugh Hare, O.B.E., M.P., *born* Jan. 22, 1911.
President of the Board of Trade, The Rt. Hon. Reginald Maudling, M.P., *born* March 7, 1917.
Minister of Housing and Local Government and Minister for Welsh Affairs, The Rt. Hon. Henry Brooke, M.P., *born* April 9, 1903.
Chancellor of the Duchy of Lancaster, The Rt. Hon. Charles Hill, M.D., M.P., *born* Jan. 15, 1904.
Minister of Agriculture, Fisheries and Food, The Rt. Hon. (Arthur) Christopher (John) Soames, C.B.E., M.P., *born* Oct. 12, 1920.
Minister of Education, The Rt. Hon. Sir David McAdam Eccles, K.C.V.O., M.P., *born* Sept. 18, 1904.
Minister of Transport, The Rt. Hon. Ernest Marples, M.P., *born* Dec. 9, 1907.
Minister of Aviation, The Rt. Hon. (George Edward) Peter Thorneycroft, M.P., *born* July 26, 1909.
Paymaster-General, The Rt. Hon. Lord Mills, K.B.E., *born* Jan. 4, 1890.
Minister of Defence, The Rt. Hon. Harold Arthur Watkinson, M.P., *born* Jan. 25, 1910.

The above form the Cabinet

MINISTERS OF CABINET RANK

First Lord of the Admiralty, The Lord Carrington, K.C.M.G., M.C., *born* June 6, 1919.
Secretary of State for War, The Rt. Hon. John Dennis Profumo, O.B.E., M.P., *born* Jan. 30, 1915.
Secretary of State for Air, The Rt. Hon. George Reginald Ward, M.P., *born* Nov. 20, 1907.
Minister of State (Foreign Affairs), The Rt. Hon. (William) David Ormsby-Gore, M.P., *born* May 20, 1918.
Minister of State (Commonwealth Relations), The Rt. Hon. Cuthbert James McCall Alport, T.D., M.P., *born* March 22, 1913.
Minister of State (Colonial Affairs), The Rt. Hon. the Earl of Perth, *born* May 13, 1907.
Minister of State (Scottish Office), The Lord Craigton, C.B.E., *born* Sept. 3, 1904.
Minister of State (Board of Trade), The Rt. Hon. Frederick James Erroll, M.P., *born* May 27, 1914.
Minister of State (Welsh Affairs), The Rt. Hon. Lord Brecon, *born* 1905.
Minister of Pensions and National Insurance, The Rt. Hon. John Archibald Boyd-Carpenter, M.P., *born* June 2, 1908.
Postmaster-General, The Rt. Hon. John Reginald Bevins, M.P., *born* August 20, 1908.
Minister of Health, The Rt. Hon. (John) Enoch Powell, M.B.E., M.P., *born* June 16, 1912.
Minister of Works, The Rt. Hon. Lord John Hope, M.P., *born* April 7, 1912.
Minister of Power, The Rt. Hon. Richard Frederick Wood, M.P., *born* Oct. 5, 1920.
Minister without Portfolio, The Rt. Hon. the Earl of Dundee, *born* May 3, 1902.

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state, and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. The Finance Bill, which imposes taxation, and Consolidated Fund Bills, which authorise expenditure, must begin in the Commons and may not be amended by the Lords in any respect whatever. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(*a*) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (*b*) any other public bill (except one to extend the life of a Parliament) which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914–18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803–1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid but are entitled to a daily expense allowance of up to £3 3s. and to travelling expenses from their homes to the House.

Since 1911 members of the House of Commons have received payments and travelling facilities, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. In 1954 a sessional expense allowance of £2 for each Parliamentary day, excluding Fridays, was introduced. Since 1957, members may claim income-tax relief for expenses incurred, up to a total of £1,750. Members of Parliament contribute at the rate of £18 per annum towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits; income from investments in 1958-59 was £3,670 and expenditure in grants £15,970. The Capital Account (1959) stood at £105,275. An Act was passed in 1957 enabling the Treasury to make an annual contribution to the fund. £10,000 was so contributed in 1958–59.

THE HOUSE OF LORDS

The House of Lords consists of some 900 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers by descent of England, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), one Irish Representative Peer (elected before 1921 for life), Scottish Representative Peers (16 elected for duration of Parliament) and life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as a member of the House of Commons for an English, Welsh or Scottish constituency.

THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615, Irish representation being reduced from 105 to 13 members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act*, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordnance issued in the reign of Richard II stated that "Parliament shall be holden or kepid wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flagstaff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 13½-ton Hour Bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856. The dials of the clock are 22½ feet in diameter, the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The Lord High Chancellor of England is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 16, 1742.
Henry Pelham, *Whig*, Aug. 25, 1743.

D. Lloyd George, *Coalition*, Dec. 7, 1916.
A. Bonar Law, *Conservative*, Oct. 23, 1922.
S. Baldwin, *Conservative*, May 22, 1923.
J. R. MacDonald, *Labour*, Jan. 22, 1924.
S. Baldwin, *Conservative*, Nov. 4, 1924.
J. R. MacDonald, *Labour*, June 8, 1929.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
N. Chamberlain, *Coalition*, May 28, 1937.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Conservative*, May, 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
Sir A. Eden, *Conservative*, April 6, 1955.
H. Macmillan, *Conservative*, Jan. 13, 1957.

Of the 43 Prime Ministers 18 sat in the House of Lords and 24 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

OFFICERS OF THE HOUSE OF LORDS

Speaker, The Rt. Hon. David Patrick Maxwell Fyfe, Viscount Kilmuir, G.C.V.O. (+£8,000 *as Lord Chancellor*) £4,000

Senior Clerks, T. G. Odling; D. Scott; C. A. S. S. Gordon; E. S. Taylor, PH.D.; M. H. Lawrence; F. G. Allen; A. A. Birley; R. S. Lankester; K. A. Bradshaw; D. A. M. Pring, M.C.; J. H. Willcox; J. P. S. Taylor; C. A. James; H. M. Barclay; M. T. Ryle; D. McW. Millar; C. J. Boulton; J. F. Sweetman; A. A. Barrett. each £1,500 to £2,120

Assistant Clerks, R. V. R. James; D. W. Limon; J. R. Rose; R. K. Middlemas.

Examiners of Private Bills, H. R. M. Farmer; P. Stuart-Heaton.

Taxing Officer, H. R. M. Farmer.

DEPT. OF THE SPEAKER

Speaker's Secretary, Brig. F. S. Reid, C.B.E. £1,785 to £2,305

Counsel to the Speaker, Sir Alan Ellis, K.C.B., Q.C..... £3,800

Chaplain to the Speaker, Rev. Canon J. McLeod Campbell, M.C., D.D..... £544

Librarian, Strathcarn Gordon, O.B.E. £2,400 to £3,000

Senior Library Clerks, R. F. C. Butcher; D. C. L. Holland; E. C. Thompson; R. H. V. C. Morgan; A. B. Pepin; D. J.T. Englefield; D. Menhennet; B. J. Enright; H. J. Palmer; G. F. Lock.... £1,217 to £1,925

Accountant, A. J. Moyes, C.B.E. . £1,650 to £2,250

Deputy Accountant, F. J. Wilkin, D.F.M. £1,195 to £1,625

Editor, Official Report (*Hansard*), L. W. Bear £1,925 to £2,365

Shorthand Writer, A. R. Kennedy..... *fees*

Vote Office, Principal Clerk, P. K. Marsden £1,650 to £2,190

DEPT. OF THE SERJEANT-AT-ARMS

Serjeant-at-Arms, Maj.-Gen. I. T. P. Hughes, C.B., C.B.E., D.S.O., M.C..... £3,000

Deputy do., Lt.-Col. P. F. Thorne..... £2,120

Assistant do., Cdr. D. Swanston, D.S.O., D.S.C., R.N. (*ret.*)..... £1,630 to £1,907

HEIRS TO PEERAGES WHO ARE MEMBERS OF THE HOUSE OF COMMONS

Lord Balniel (*Crawford and Balcarres*) Hertford (*Conservative*); Hon. Anthony Benn (*Stansgate*), S.E. Bristol (*Labour*); Earl of Dalkeith (*Buccleuch*), Edinburgh, North (*Conservative*); Hon. T. G. D. Galbraith (*Strathclyde*), Glasgow, Hillhead (*Conservative*); Rt. Hon. W. D. Ormsby-Gore (*Harlech*), Oswestry (*Conservative*); Viscount Hinchingbrooke (*Sandwich*), South Dorset (*Conservative*); Viscount Lambton (*Durham*), Berwick-upon-Tweed (*Conservative*); Hon. Richard Stanley (*Derby*), North Fylde (*Conservative*).

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the Chiltern Hundreds and the Manor of Northstead as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on sufferance, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within four minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (*see* p. 309).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, *e.g.* ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered.*" He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the *Clerk of the House of Commons*, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than two demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the

House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing *exclusively* with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 10, 1882. A motion may be made *that the question be now put*. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the Closure. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, *e.g.* "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name* him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman* of *Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman* of *Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

VOTES CAST AT THE GENERAL ELECTIONS, 1945, 1950, 1951, 1955 AND 1959 AND AT BY-ELECTIONS SINCE 1945

General Election, 1945

Labour	11,985,733
Conservative	8,693,858
Liberal	2,253,197
Liberal National	759,884
Ulster Unionist	441,109
Independent	287,345
Irish Nationalist	148,078
National	125,299
Communist	102,780
Common Wealth	96,247
Independent Conservative	40,948
Independent Labour Party	36,153
Scottish Nationalist	30,594
Welsh Nationalist	14,887
Democratic	1,809
Independent Socialist	472
Total	25,018,393

By-elections, 1945–50

At 50 by-elections between the General Elections of 1945 and 1950, the following votes were cast:—

Labour	740,914
Conservative and National Liberal	641,540
Ulster Unionist	87,435
Liberal	49,730
Independent	35,647
Irish Nationalist	24,422
Scottish Nationalist	13,040
Welsh Nationalist	12,775
Independent Labour Party	8,367
Communist	5,087

General Election, 1950

Labour	13,265,612
Conservative	11,166,026
National Liberal and Conservative	983,623
Ulster Unionist	352,334
Liberal	2,621,489
Independent	112,318
Communist	91,815
Irish Nationalist	65,211
Irish Labour	52,715
Labour Independent	26,021
Welsh Nationalist	17,680
Scottish Nationalist	10,630
Independent Labour Party	4,112
Total	28,769,577

By-elections, 1950–51

At 15 by-elections between the General Elections of 1950 and 1951 the following votes were cast:—

Conservative and Associate	265,535
Labour	264,977
Irish Labour	30,883
Liberal	2,752
Independent Labour Party	1,366
Communist	729
Independent	453

General Election, 1951

Labour	13,949,103
Conservative and Associate	*13,718,059
Liberal	730,552
Irish Nationalist	94,587
Communist	19,640
Welsh Nationalist	10,920
Scottish Nationalist	7,293
Independent Labour Party	4,388
Others	62,135
Total	28,596,693

* Four Ulster Unionists were returned unopposed.

By-elections 1951–55

At 45 contested by-elections between the General Elections of 1951 and 1955, the following votes were cast:—

Conservative and Associate	751,421
Labour	705,176
Liberal	28,216
Welsh Nationalist	10,243
Independent	3,405
Scottish Nationalist	2,931
Communist	1,457

General Election, 1955

Conservative and Associate	13,311,938
Labour	12,405,246
Liberal	722,395
Sinn Fein	152,310
Welsh Nationalist	45,119
Communist	33,144
Scottish Nationalist	12,112
Others	78,490
Total	26,760,754

By-elections, 1955–59

At 52 contested by-elections between the General Elections of 1955 and 1959, the following votes were cast:—

Labour	784,656
Conservative and Associate	779,577
Liberal	174,904
Sinn Fein	54,516
Independent	40,986
Welsh Nationalist	7,719
Anti-Partition	6,421

General Election, 1959

Conservative and Associate	13,750,965
Labour	12,195,765
Liberal	1,661,262
Welsh Nationalist	77,571
Sinn Fein	63,915
Communist	30,897
Scottish Nationalist	21,738
Others	61,225
Total	27,863,338

By–elections, 1959–60

At 3 by-elections since the General Election of 1959, the following votes have been cast:

Conservatives and Associate	53,107
Labour	34,611
Liberal	10,558
Independent	1,560

The Conservatives have gained one seat (Brighouse and Spenborough) from Labour.

ALPHABETICAL LIST OF MEMBERS OF THE HOUSE OF COMMONS
(Elected October 8, 1959)

For abbreviations, see page 322. The number before the name of each constituency is for easy reference and corresponds to the number of that constituency given on pp. 322–342.

THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division at the General Election of 1959.

ABBREVIATIONS.—*C.* = Conservative; *Comm.* = Communist; *I.L.P.* = Independent Labour Party; *Ind.* = Independent; *L.* = Liberal; *Lab.* = Labour; *Nat. L.* = National Liberal; *Scot. Nat.* = Scottish Nationalist; *S.F.* = Sinn Fein; *U.U.* = Ulster Unionist; *Welsh Nat.* = Welsh Nationalist. An asterisk * denotes membership of the last House for the same division; an obelisk †, for a different division.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1959–60

THE NEW PARLIAMENT.—In accordance with the Prime Minister's announcement during the summer recess of 1959, the Session was formally prorogued and Parliament was dissolved on *Sept.* 18, and at the general election on *Oct.* 8 the Conservative Party was again returned to power, this time with a majority increased to exactly 100 over all other parties. With their associates they won 365 seats, a net gain of 22, while Labour members numbered 258, a loss of 23, and the Liberals 6, with one Independent, a former Conservative. Mr. Macmillan, the third successive Prime Minister to win an election, lost no time in announcing the changes in his Cabinet, and when the new Parliament met on *Oct.* 20 his Ministry was practically completed. Most of the members of the former Cabinet remained, but Mr. Lennox-Boyd, Secretary of State for the Colonies, and Mr. Geoffrey Lloyd, Minister of Education, relinquished their offices, and there were two new-comers, Mr. Edward Heath, former Chief Government Whip, who was appointed Minister of Labour, and Mr. Ernest Marples, previously Postmaster-General, who became Minister of Transport, with altered responsibilities. The new Minister of Aviation, Mr. Duncan Sandys, the former Minister of Defence, took over most of the functions of the Ministry of Supply, which was abolished. Mr. Butler remained Home Secretary and Leader of the House of Commons, and Lord Hailsham became Lord Privy Seal and Minister for Science and Technology, his functions to include those previously exercised by the Prime Minister under the Atomic Energy Acts and responsibility to Parliament for the Privy Council committees to which the five research councils reported. Mr. Harold Watkinson was selected as Minister of Defence, Mr. Iain Macleod was transferred to the Colonial Office, and Sir David Eccles became Minister of Education. Lord Mills left the Ministry of Power to become Paymaster-General but remained in the Cabinet, and was succeeded by Mr. Richard Wood, and Mr. Reginald Maudling went to the Board of Trade. Lord Kilmuir, the Lord Chancellor, Mr. Selwyn Lloyd, the Foreign Secretary, and Mr. Heathcoat Amory, the Chancellor of the Exchequer, retained their key positions.

THE CHOICE OF SPEAKER.—Before the formal prorogation on *Sept.* 18, warm tributes were paid by the Prime Minister, Mr. Gaitskell and Mr. Wade, for the Liberals, to the Speaker, Mr. W. S. Morrison, who was retiring from the House and the office after nearly eight years in the chair, and a resolution thanking him for his services was agreed to unanimously. The first duty of the new House of Commons when it assembled was to choose a successor. From the Government back benches, Sir James Duncan moved and Sir Robert Cary

seconded the election of Sir Harry Hylton-Foster, the former Solicitor-General. Mr. Gaitskell at once expressed on behalf of the Opposition their strong dissatisfaction and disapproval of the method by which the election had been conducted. He thought that the Speaker should be chosen over the years from different parties, and that on this occasion there was a peculiarly strong case for such a man to have been chosen from the Opposition benches. He had, he said, made representations to Mr. Butler, who had considered them but had made it plain that there was only one man who was likely to be acceptable to Conservatives, Sir Frank Soskice, who had declined to allow his name to go forward. Had it been in order the Opposition would have divided against the proposal to elect Sir Harry Hylton-Foster; not for any personal reason whatever, but on principle. Mr. Macmillan said there was no question of handing over the choice of the Speaker to the Opposition; it was a matter for the House, but they would have done their best to canvass support for Sir Frank Soskice in the Conservative Party if he had wished his name to go forward. As this was not possible, it seemed to him that the best course would be to select a man with such high qualifications as Sir Harry Hylton-Foster, though he did not mean that there were not other members on both sides of the House whose quality and character would have entitled them to stand. Sir Harry then submitted himself to the will of the House, and in a few happy sentences dispelled any "atmosphere" that had appeared. He claimed that he loved and revered the House and promised that it would be his whole ambition in life to serve it faithfully and well and to maintain those traditions which had made the House at once the origin and the example of parliamentary institutions throughout the world. Resisting in the traditional fashion, Sir Harry was dragged from his seat by his sponsors to the Speaker's Chair, to receive at once the congratulations and good wishes of the Prime Minister, Mr. Gaitskell and Mr. Grimond. On the following day the Queen's approval of the Commons' choice was announced by the Lord Chancellor in the Upper Chamber, and the new Speaker, after informing M.P's of this sanction, signed the roll and took the oath, being followed by members, first of whom was Sir Winston Churchill, now "Father of the House", and then the Prime Minister and other Ministers. The House on *Nov.* 5 carried unanimously an Address praying the Queen to confer "some signal mark of her royal favour" upon the former Speaker for his eminent services, and Her Majesty agreed and created Mr. Morrison a viscount. He selected the title of Viscount Dunrossil, and on *Nov.* 12 he was appointed Governor-General of Australia on the request of the Commonwealth.

THE QUEEN'S SPEECH.—The formal opening of the new Parliament by Royal Commission in the absence of the Queen took place on *Oct.* 27, the ceremony being necessarily shorn of its traditional pageantry and colour. The Queen's Speech was read in the House of Lords by the Lord Chancellor after the Commons had been summoned, and led by the new Speaker, had appeared at the bar of the House. Reference was made early in the Speech to "the warm and friendly welcome" accorded to Princess Alexandra in Australia and to the generous courtesy with which the Kings of Thailand and Cambodia received her. The Government would continue to work for the improvement of relations between East and West and would use all their efforts to this end. They would maintain their efforts to achieve agreement at the Geneva Conference on the discontinuance of nuclear weapon tests. Then the Speech outlined the Government's legislative programme for the Session. Ministers, it was announced, would give urgent attention to the problems of those areas in which there was need to provide further opportunities for employment, and a Bill would be introduced to replace the Distribution of Industry Acts. The Government would press forward with their policy of building new highways and improving existing roads. They would encourage further modernization of the railways and a Bill would be brought forward for improving the arrangements for licensing air services and air-line operators and to ensure the maintenance of high standards of safety. An inquiry into the working of the Companies Acts would be initiated and a Bill to strengthen the present law relating to building societies would be introduced. The system of guaranteed prices and the assurances in the Agriculture Act would be continued and legislation would be introduced to provide grants for horticultural growers. The Government would encourage the more economic marketing of produce and proposals would be made for reorganizing and improving Covent Garden Market. Close attention would be given to social welfare, including the needs of the war-disabled and old people. The earnings rules for pensioners and widowed mothers would be further relaxed. New house building would be maintained at a high level and the slum clearance campaign would continue. The Government would press forward with their plans to improve school buildings and to enlarge opportunities in the schools, technical colleges and universities. Almost at the end of the Speech came the promise of a Bill to amend and modernize the law on betting and gaming, and of another to provide more effective means of dealing with young offenders and to extend compulsory after-care to prisoners to prevent their reversion to crime. In the House of Commons Mr. Arthur Tiley moved, and Mr. Edward Gardner, one of the new members, seconded the Address, and were followed by Mr. Gaitskell, who said the weakness of the Speech lay in what it did not contain, and he asked the Prime Minister if he could throw some light on the Summit Conference. He referred to the loss by the Opposition of 23 seats, and agreed that it was a set back but declared that it was not a landslide. The Opposition, he said, intended to fulfil its function. "We shall not be fractious or unduly turbulent, unless provoked into it. We shall be vigorous, lively and ever watchful of the Government's administration. We shall use every opportunity open to us to argue, press and fight for the things in which we believe and which we hold to be necessary for the benefit of our country and the world." Mr. Macmillan said the Government would like a Summit Conference at the earliest practicable date, and he thought the situation had improved and that the tension had been lessened. "At all costs a return to the rigours of the cold war must be avoided," he said. "So the Government will continue to work for a date for a Summit meeting as early as practicable. I hope we shall succeed. It will not be for want of trying." The general debate on the Address occupied the next three days and ranged over a variety of subjects, and on *Nov.* 2 an Opposition amendment, moved by Mr. Callaghan, regretting the omission from the Speech of proposals regarding the Government's policy in Central Africa, was defeated in the first division of the new Parliament by 344 to 251, a Government majority of 93. On the following day, Mr. Bevan, moving the Opposition's censure amendment on the Government's economic and social policy revealed in the Speech, suggested

on his own responsibility that the technical possibilities of televising Parliament on a special channel should be investigated. Mr. Gaitskell commented that he had no very strong views on the matter, and Mr. Butler described the suggestion as revolutionary but promised that it would be looked at. On the general question of the amendment the Chancellor of the Exchequer said that national savings had continued at a very satisfactory level and the expansion of the economy was bringing a considerable rise in productivity. He told the House that the removal of quantitative restrictions on a substantial list of imports to Britain was to be announced, and he called for reductions in wholesale and retail prices. The amendment was rejected by 348 to 245, a Government majority of 103, and the motion for the Address was agreed to without a division. On the same day the House of Lords approved the Address, moved by Lord Hastings and seconded by Lord Aberdare, after defeating by 84 to 31 an Opposition amendment on colonial affairs with particular reference to conditions in Central Africa.

LICENSED BETTING SHOPS.—The existing law on gaming, parts of which went back to the sixteenth century, was swept away entirely by the Betting and Gaming Bill, which occupied the attention of Parliament for a considerable part of the session. Under its proposals no game was to be regarded as unlawful in itself, but gaming became unlawful if certain rules were broken. The Bill, which implemented many of the recommendations of the Royal Commission on the subject, provided that betting shops should be licensed and bookmakers registered and issued with permits on payment of an initial fee of £100. The betting shops would not be used for any purpose other than the placing of bets and the paying out of winnings, and nobody under 18 would be admitted to them, loitering inside or outside was to be forbidden and facilities for hearing or seeing any sound or television broadcast were barred. Penalties for street betting were increased and a bookmaker's permit could be cancelled if its holder were convicted of certain offences, including street betting. With regard to gaming the Bill provided that the game must be fair and the gaming conducted in a fair manner, all the players having equal opportunities, with no charge for the right to take part (except in clubs) and no "cut" in the stakes for the organizer. Moving the second reading on *Nov.* 16, Mr. Butler, the Home Secretary, said it was natural that in a new Parliament they should seek to modernize and rectify some of the social legislation which governed personal habits. The Royal Commission considered that the object of gambling legislation should be to interfere as little as possible with individual liberty to take part in the various forms of gambling, but to impose such restrictions as were desirable and practicable to discourage and to prevent excess. The Government had accepted that as the aim of gambling legislation suitable to the present day, and the Bill had been framed to carry out that aim. The Government agreed that facilities for cash betting off the course should be provided within the law, and the Bill implemented the Royal Commission's recommendations that betting in cash by post should be permitted and that licensed betting offices should be established where the public could place their bets in cash. An inter-departmental committee had been appointed to consider whether bookmakers who took bets off the course should be required to make a contribution towards the sport. That part of the Bill dealing with gaming swept away all the existing law on the subject and paved the way for new consideration on the lines laid down by the Commission. The kinds of amusements found at travelling fairs, amusement arcades, the side-shows of charity fêtes and sports meetings would fall within the definition of gaming, and without special provision being made in the Bill would be unlawful. The Bill allowed such amusements to take place at non-commercial entertainments such as bazaars, sales of work or fêtes. Only two conditions had to be complied with—that the whole proceeds, including those of the amusements, after deduction of expenses, should be devoted to purposes other than private gain, and that there should be other inducements of a non-gambling character to attract people to attend. Mr. Gordon Walker, after protesting that the Government should have allowed their supporters a free vote on the Bill, as Opposition members had, said he did not like the idea of the betting shops as it appeared in the Bill. If they passed the Bill in its present form the betting shops would become like a tied public house. They would get a chain owned by a few bookmakers. The second reading was carried by 311 to 49, a majority of 262, on *Nov.* 18, many members abstaining because of doubts about the operation of betting shops, and the Bill was sent to a standing committee, which spent sixty hours during four months on its consideration. After six days' discussion the committee defeated by 24 to 14 on *Feb.* 4 a proposal to legalize street betting, and on *Feb.* 9 a Government amendment designed to make it clear that the collection of bets at factories and other places of work was legal and exempted from the general prohibition was accepted, the clause establishing betting shops being passed by 25 to 11 two days later. On *March* 1 a Government amendment to enable licensing justices to give some preference to local bookmakers in issuing betting office licences was adopted by 24 to 9. Mr. Vosper, the Under Secretary at the Home Office, told the committee on *March* 8 that under the first regulation which the Home Secretary would make on licensed betting offices a closing time of 6.30 p.m. would be stipulated, and later the committee accepted in principle Government proposals to prevent young people under 18 from either betting or taking part in effecting betting transactions. Mr. Vosper on *March* 29 moved an amendment which brought gaming in public houses into line with the rest of the gaming provisions of the Bill, exempting from the prohibition of gaming in places to which the public had access all games of pure skill such as darts and billiards, and this was agreed to. Before the report stage began, Mr. Vosper told the House on *May* 3 that the Government would accept in principle a recommendation that there should be a compulsory levy on off-the-course bookmakers, estimated to produce over a million pounds a year, for the benefit of horse racing, but it would not be possible to include the proposal in the present Bill and new legislation would be produced. On report on *May* 5 a new clause was agreed to, preventing local authorities subsidizing or maintaining premises for gaming. By a majority of 112 a proposal to legalize street betting was rejected. The Bill was read a third time by 211 to 42 on *May* 11. In committee in the House of Lords on *June* 2 an amendment was agreed to making it an offence to advertise a betting office. Another, advanced by the Government, limiting imprisonment for three months to the third and subsequent offence of street betting instead of the second was also accepted, as was one to legalize the playing of cribbage and dominoes on licensed premises. The Bill was given its third reading and passed by the peers on *July* 14 after they had agreed to amendments moved by the Lord Chancellor to enable a

bookmaker's permit to be reviewed at any time during the licensing year and cancelled by the licensing authority on the ground that the holder was not a fit and proper person. The Commons agreed with the amendments and the Bill received the Royal Assent on *July* 29.

NEW HOPE FOR THE UNEMPLOYED.—The Government's plans for helping localities where high unemployment existed or was probable were promptly laid before Parliament, and on the day after the official opening of the new Session the Local Employment Bill was presented and read a first time in the House of Commons. Under this the Board of Trade was given power to make loans and grants to firms towards the cost of building new premises in localities of high unemployment, and the Ministry of Housing and Local Government was empowered to make grants to local authorities to assist in clearing derelict, neglected or unsightly land or to acquire it so that it could be brought into use for development or to improve the amenities of the neighbourhood. In granting industrial development certificates, the Board of Trade would have particular regard to the need for providing employment in localities of high unemployment. Three professional management corporations, one each for England, Scotland and Wales, would be set up to supervise the Government's new measures and to manage the Board of Trade's industrial property, the existing industrial estate companies being disbanded and their leasehold properties and liabilities transferred to the appropriate management corporation. A national co-ordinating committee would promote uniformity of action among the corporations and give general advice to the Board of Trade on their activities. The President of the Board of Trade, Mr. Maudling, moving the second reading on *Nov.* 9, said no government had yet had power to direct a particular industry to any special place. But if firms could not be ordered to go to certain areas there could be a general prohibition on them going to congested areas and inducements could be provided to go to areas of employment difficulty. The industrial picture of the world was changing fast, with new countries industrializing themselves. Britain was facing more competition, but she was also facing new opportunities. She had to make the maximum use of this change. In their legislation they had to be prepared to deal rapidly with, and if possible in advance of, the consequences of change. Mr. Maudling said the figure of 85 per cent. proposed in the Bill to help industrialists to build their own factories had been fixed on the principle of the intangible benefits which would flow from ownership rather than rental of a factory. With regard to the plan to deal with derelict land, no new powers were given to local authorities but the grants to local authorities would be extended and could cover the cost of land as well as the cost of works on it. The Government had provided a programme for seven years ahead because they believed that by the end of that time they would have made substantial inroads on the problem. The situation could then be assessed. For the Opposition, Mr. James Griffiths said that if there was going to be no control over the allocation of labour, in a very short time the mass of the people in the country would live in London and the South. This trend must be reversed. A fence ought to be put round conurbation areas and a sign put up saying: "Stop. No further industry must come in here." The Opposition welcomed new techniques that would help to build an economy in which there could be prosperity shared by all. The Bill was given a second reading without a division on the following day, and the committee stage was opened on *Dec.* 1 and concluded on *Dec.* 9. When reconsidered on *Feb.* 2 an amendment was agreed to providing that the powers granted should be exercisable when a high rate of unemployment existed or was to be expected within such a period that it was expedient to exercise those powers, thus avoiding the word "imminent." A Labour amendment to delete the seven year period of operation was rejected by 253 to 199. On report, a Government amendment placing on the Board of Trade a duty to have regard that the employment offered should, as far as possible, contribute to the diversification of industry in the district and to take account of the number and sex of people unemployed was agreed to after a Labour amendment giving the Government wider powers in the direction of industry had been defeated by 260 to 210. The Bill was read a third time on *Feb.* 3 without a division, and the House of Lords dealt with it expeditiously, defeating in committee another Labour effort to remove the seven year limit. The Royal Assent was given on *March* 24.

CONSOLIDATING THE NATION'S PROSPERITY.—When Mr. Heathcoat Amory opened his third and last Budget in the House of Commons on *April* 4, he quickly made it clear that his aim would be to consolidate and fortify the nation's prosperity, and he wound up his speech with the claim that he had released no further spending power. The Chancellor's proposals included the abolition of the entertainments duty on cinemas, increases in the Profits Tax and the duty on tobacco, and further measures to prevent income tax avoidance. He said that the previous year's revenue was well above his expectations at £5,630,000,000, which was £305,000,000 more than the estimate, and above the line expenditure was £5,224,000,000, the result above the line being a surplus of £386,000,000, instead of his expectation of £102,000,000. Below the line receipts at £386,000,000 were £4,000,000 more than the estimate, and total payments at £1,086,000,000 were £119,000,000 less than he had estimated. So the Exchequer had done a good deal better than he expected, partly because of reduced outgoings but mainly because of increased revenue—in itself, declared Mr. Amory, a striking testimony to the success of the Government's policy of expansion. He said that national savings had had another outstandingly successful year, £339,000,000 of new money having been lent to the Exchequer during the year, and he thanked all those who had devoted so much time to this most worthwhile form of voluntary public service. After referring to "the general growth of prosperity" and the fact that prices had now been stable for nearly two years, the Chancellor said that with regard to the balance of payments the outcome had been disappointing, the current surplus having fallen from £349,000,000 to £145,000,000. Coming to the economic prospects for the year, he thought the present position was one in which production, employment, investment and saving were all running at high and satisfactory levels. He judged that we had now reached the stage where we should be cautious about further expansion of credit. First steps had already been taken by the increase in the bank rate, and he thought it likely that the time might soon arrive when other steps should be taken to restrain further expansion of private credit and they stood ready to do so. On the basis of existing taxation, he put the total revenue for next year at £5,958,000,000, and the total ordinary expenditure at £5,586,000,000, an above the line surplus of £372,000,000, and with below the line payments of £703,000,000,

the net figure to be met by borrowing was £331,000,000. He next announced that he proposed to make an important change in the method of financing the British Transport Commission, the effect of which was that the deficit of the Commission, expected to be £90,000,000, would have to be met from revenue. To encourage small savers, he increased from 1,000 to 1,200 the limit of the current issue of 15s. national savings certificates, and said a new issue of 5 per cent Defence Bonds would be made with a limit on holdings of £5,000. Declaring that Premium Bonds had attracted a considerable volume of savings to the Exchequer, he said he proposed to improve the scheme in several ways. The six months' waiting period before a bond was eligible to be drawn for a prize would be reduced to three months, a few prizes of £5,000 would be introduced, the total number of prizes would be increased, the number of bonds which could be held would be increased from 500 to 800, and bonds would be eligible for a prize in the first monthly draw after the holder's death. These changes would first apply to the prize draw on *Nov.* 1, and from then would apply to all outstanding bonds purchased since the beginning of the scheme. It was clear, said the Chancellor, that he could not make any net reduction in taxation, but he made a number of changes which would lead to improvements in the tax law, including the abolition of the 249-years-old duty on playing cards. The reform of the wine duty structure would be completed by reducing the rates for imported heavy wines by 12s. a gallon, and where the duty on light wines imported in cask would remain unaltered the rates on light wines imported in bottle, including sparkling wines, would also be reduced by 12s. a gallon. The excise duty on British wines would be reduced by 8s. a gallon for still heavy wines and 12s. a gallon for all sparkling wines. Next he said, amid cheers, that he had come to the conclusion that the entertainments duty on cinemas should be abolished, at a cost of £6,500,000 this year and £7,000,000 in a full year. His first proposal in the Inland Revenue field was to bring within the tax-charge voluntary payments at the end of employment, such as to directors, and all payments described as compensation for loss of office, but to exclude reasonable lump sum payments in the nature of superannuation benefits. Loss relief in respect of farming or other trading losses incurred by "some so-called hobby farmers" would be admitted only if the activities were carried on "on a commercial basis and with a reasonable expectation of profit." Mr. Amory then outlined wider powers he intended to take to beat new devices by dividend strippers for tax avoidance, while providing for the exclusion of *bona fide* commercial transactions. After stating that the estate duty would be graduated on gifts made by a person within five years preceding his death, he told the Committee that the dependent relative and housekeeper allowances on income tax would be increased from £60 to £75, and a new allowance of £40 would be made for a widow or widower who had a child eligible for child allowance but no housekeeper. As to post-war credits, he was extending the categories of people who could claim repayment on hardship grounds to those who had been receiving sickness or industrial injury benefit or registered as unemployed for a continuous period of 26 weeks, and those receiving a war or industrial injury disablement allowance of 100 per cent., and was extending repayment to all widows entitled to post-war credits in their own rights. These proposals would cost this year about £9,000,000 in addition to the £18,000,000 repayable under existing regulations. To provide additional revenue to cover the cost of the concessions, he had decided to raise the duties on tobacco leaf by 3s. 4d. per lb., equivalent to an extra 2d. on a packet of 20 cigarettes, which would yield £39,600,000 this year. He also proposed an increase in the profits tax from 10 per cent. to 12½ per cent., which would not bring in any appreciable amount this year but would yield £40,000,000 in 1961–62. The result of all these changes was that the surplus above the line would become £304,000,000 and the deficit below the line £622,000,000, leaving £318,000,000 to be covered by borrowing. The Chancellor said in conclusion that he believed the Budget would have just that moderating influence on the rate of expansion that was needed. The resolution on tobacco was carried by 318 to 221, and the remaining resolutions were agreed to. Mr. Gaitskell declared that many of the proposals to protect the revenue had been advocated by the Opposition, and regretted the omission of any help for the old age pensioner. The main criticism was voiced on the following day by Mr. Harold Wilson, who said that many of the proposals would have the full support of the Opposition, but he thought that the Conservatives "looked rather like a collection of St. Bernards who had lost their brandy." He declared that the Chancellor had scarcely begun to deal with tax avoidance, and he wondered how he could appeal for wage restraint in the face of such scandals. Mr. Wilson described what he called "basic trends" of the day, and said that if they were allowed to go uncorrected over the next decade there was a real danger that civilization in Britain would be shaped in a way that could only lead to national decadence and the loss of moral influence in the world. A former Conservative Chancellor, Mr. Peter Thorneycroft, on *April* 6, expressed the view that the Government were spending, and were planning to spend, a great deal too much money. On the following day, when the general debate ended, Mr. Amory wondered which of the Government's policies his critics would wish to see reversed. The aims of the Budget, he declared, were to ward off the risks of the return of inflation, to safeguard the balance of payments, and to reinforce the price stability that had been enjoyed for the past two years. The Budget resolutions were considered on report and agreed to on *April* 12, that concerned with the tobacco duty being carried by 320 to 220, and the Finance Bill was read a first time. Before the second reading, the Chancellor, on *April* 28, announced the Government's decision to curb the further expansion of private credit. He said the London clearing banks had been asked to make special deposits of one per cent. of each bank's total deposits, and Scottish banks deposits of one half per cent., and restrictions were being reimposed that day on hire-purchase terms for a wide range of consumer goods. The Finance Bill was given a second reading without a division on *May* 3, when Mr. Amory assured the House that the Government would not exclude the importance of applying more rigorous standards to the public sector of economy, especially when considering proposals for increases in Government expenditure. Dealing with "the golden handshake," he said the first £5,000 of any payment designed to compensate a man for the loss of future emoluments of an office would be exempt from tax. In committee on *May* 18 an amendment by Mr. Nabarro to reduce the proposed increase in tobacco duty was rejected by 234 to 179. Another amendment to mitigate the effect of the increase for old age pensioners was lost by 244 to 166. A Labour amendment to reduce from £5,000 to £2,000 the amount of compensation for loss of office to be

exempted from income tax was defeated by 174 to 106 on *May* 26, and on *May* 31 an Opposition amendment to increase the penalty for failure to notify liability to tax from £50 to £100 was agreed to. On *June* 21 a proposal to give blind persons an income tax allowance of £100 was lost by 240 to 174, and another to provide for relief for the 100 per cent. disabled by 234 to 167. The report stage was completed on *July* 6 after the defeat of a proposed new clause to repeal the television licence duty and another to extend earned income relief to the small maintenance payments to wives separated from their husbands. When the Bill was given a third reading without a division on *July* 8 Mr. Amory, dealing with the clauses regarding the avoidance of tax, said he believed he had held the balance between severity and leniency about right. It was necessary, he claimed, to be stern in countering tax avoidance because if it were allowed to proceed not only would the loss to the revenue be very great but the effect on the rest of the public would be most unfair. The Bill received the Royal Assent on *July* 29, practically simultaneously with the departure of its sponsor from the Treasury and the House of Commons.

Grants for Horticulturists.—The assistance promised in the Queen's Speech for horticultural production and marketing was outlined early in the Session by Mr. John Hare, at that time Minister of Agriculture and Fisheries and Food. It took the form of grants to producers and the establishment of a Marketing Council, and when he moved the second reading of the necessary Bill on *Nov.* 19, Mr. Hare claimed that the proposals would help producers to be more effective in marketing and would set up machinery through which all sections of the industry would be able to work together to improve marketing and distribution. He promised that the Government would later introduce legislation to make vital changes at Covent Garden. Grants would be made to growers of one third of the cost of facilities needed for better marketing—for the erection or improvement of packing sheds and loading bays and for washing and grading products, as well as for long-term improvements, such as heating systems. The line of eligibility for grants would be drawn to include individual growers with not less than four acres of open land, giving them the benefits of large scale organizations. The cost of the Horticultural Marketing Council, which would provide information about supply, demand and prices and carry out research, would ultimately be paid for by the industry itself but for two years the Government would provide the finance up to a maximum of £250,000. The second reading was carried without a division despite criticism of the proposals from several members, the third reading was agreed to on *Feb.* 24 after Mr. Hare had announced the extension of the period of Government finance to three years, and the Royal Assent was given on *March* 22.

The Traffic Problem.—Attempts to mitigate in some degree the delays and interruption created by the ever-growing number of motor vehicles on the roads were made in the Road Traffic and Roads Improvement Bill, which received a second reading without a division on *April* 11. It sought to impose ticket fines for minor road offences instead of prosecutions, to appoint uniformed traffic wardens, to increase the powers of the Minister of Transport to combat congestion in London, and to amend the existing powers of local authorities to provide parking places. Moving the second reading on *April* 11, Mr. Ernest Marples, the Minister of Transport, said the Bill gave to local authorities the power to sell or dispose of an abandoned car if it appeared to be abandoned. Certain minor offences could be punished by giving a driver a written notice offering him the option of paying a fixed penalty without recourse to the courts, only where the offender elected not to go to court, but there would be no fining on the spot. The driver could either pay the fixed penalty within 14 days or he could wait to be prosecuted. Mr. Gordon Walker opposed a provision in the Bill giving the Home Secretary power to confer by order the traffic duties of the police on traffic wardens and said the Bill failed to deal with the real long term problem. Replying to the debate, Mr. Renton, Under Secretary to the Home Office, said the Home Secretary regarded the ticket system and the traffic wardens by way of being experiments. The wardens would be under police control to help the police but not in any way to replace them. The standing committee to which the Bill was sent, on *May* 3, accepted Government amendments to strengthen the clause relating to the ticket system and an Opposition amendment increasing from 14 to 21 days the period in which motorists would have either to pay or go to court, and the clause was approved two days later. The clause establishing traffic wardens was agreed to on *May* 12. Mr. Renton emphasized that the police and wardens would only be able to serve notices giving motorists the option. He said that in London men between 25 and 55 would be employed as full-term traffic wardens, and that in the early stages it was not intended to recruit women as wardens. When the House of Lords gave the Bill a second reading on *June* 21, Lord Chesham, Parliamentary Secretary to the Ministry of Transport, said there were many other traffic problems not dealt with in the Bill, and the Minister intended to ask Parliament for additional powers in a later session. The third reading was agreed to on *July* 19, and the Bill received the Royal Assent on *July* 29.

The Future of Cyprus.—The achievement of independence by three overseas countries added three Bills to the Parliamentary programme. The Royal Assent was given on *June* 2 to a measure providing that when Ghana became a republic a month later the operation of all existing laws in relation to Ghana and its citizens and interests should remain unaffected. After many months of negotiations a settlement was reached on the future of Cyprus just in time for the passage of the necessary legislation. Moving the second reading on *July* 14, Mr. Iain Macleod, the Colonial Secretary, said that for nine months the relations of the island to the Commonwealth would be treated as if she were with but not of the Commonwealth. In that time it would be possible for Cyprus to consider the question and decide if she wished to apply to join the Commonwealth. On the complicated question of citizenship, he said that six months after independence a citizen of Cyprus would lose his citizenship of the United Kingdom and colonies unless he were ordinarily resident here, in the colonies or in an independent Commonwealth country. Persons in the sovereign base areas would probably have dual nationality. Mr. Amery, the Under Secretary who had conducted the negotiations, said we had secured 31 sites, 18 of which were permanent, and the bases were under full British sovereignty. The Bill received the Royal Assent on *July* 29, at the same time as the Nigerian Independence Bill.

Private Members' Bills.—Among the measures passed during the Session were several introduced by private members. They included one sponsored

in the Commons by a new woman M.P., Mrs. Margaret Thatcher, in a maiden speech, and in the Lords by Lady Elliot—the first occasion upon which such an all-woman introduction had been recorded. The Bill provided that with certain exceptions, meetings of local authorities and other bodies exercising public functions and of their committees should be open to the Press unless a majority agreed by resolution to exclude reporters in the public interest. It had been pointed out by Mrs. Thatcher on the second reading on *Feb.* 5 that the public had no right of admission either in common law or by statute to the meetings. Mr. Rupert Speir was also successful with his Noise Abatement Bill, which gave local authorities the power to act against excessive or unnecessary noise regarded as prejudicial to health or as a nuisance or an annoyance, loud speakers in streets being prohibited between 9 p.m. and 8 a.m. with specified exceptions. The House of Lords in committee removed from the exemptions the chimes of such vehicles as ice cream sellers, but a week later they altered their minds and permitted loud speakers between 9 a.m. and 7 p.m. on vehicles used for the conveyance of a perishable commodity for human consumption. Mr. Richard Marsh's Offices Bill to make better provision for health, welfare and safety in offices reached the Statute Book after being considerably altered in standing committee to meet the wishes of the Home Office, and a promise by Mr. Butler of comprehensive legislation in the coming session. Another new Act, presented by Mr. Nabarro, made provision for minimum standards of efficiency and safety in respect of oil-burning appliances, and Mr. Graham Page was responsible for a Bill enabling pawnbrokers to increase their charges for borrowing £1 from 8*d.* a month, at which it was fixed in 1872, to 1*s.* 3*d.* a month.

A New Foreign Secretary.—Just before Parliament adjourned for the summer recess, a number of changes in the Government were announced as the result of the desire of Mr. Heathcoat Amory to relinquish the office of Chancellor of the Exchequer. In his place the Prime Minister selected Mr. Selwyn Lloyd, and to succeed him at the Foreign Office appointed the Earl of Home, Mr. Edward Heath becoming Lord Privy Seal with Foreign Office responsibilities to represent the department in the House of Commons. The arrangement was strongly criticized by the Opposition who demanded a debate on the subject. This took place on *July* 28, when what was in effect a resolution of censure on the Prime Minister was defeated by 332 to 220, a Government majority of 112. Introducing the motion, Mr. Gaitskell said the last time a peer was appointed Foreign Secretary was in 1938 though the question had been considered more recently—in 1955 when Sir Anthony Eden had found it impossible to make a member of the House of Lords Foreign Secretary. The Labour leader declared that Lord Home's appointment was unnecessary, unwise, and constitutionally objectionable, and would not be good for the conduct of our affairs in the world. Mr. Macmillan said that he recommended the appointment of Lord Home because he felt that he was the best man for the job. He believed he had the qualities that would make him a successful and widely respected Foreign Secretary. The Prime Minister pointed out that last year the Foreign Secretary was absent on business for 125 days, 75 of them while Parliament was sitting, and he had been able to answer oral questions on only five out of the 24 Foreign Office days. Under the new arrangements, the Lord Privy Seal, a Cabinet Minister, would be the responsible Foreign Office Minister in the Commons and would be available for a far greater time. He was satisfied that the Foreign Secretary and his deputy would work together in harmony and co-operation. The Prime Minister was loudly cheered as he left the House after the division. Parliament adjourned on the following day—after the Royal Assent had been given to 55 Bills—until *Oct.* 25, the arrangement being to end the Session almost immediately and for a new Session to open on *Nov.* 1.

PUBLIC ACTS OF PARLIAMENT, 1959–60

Set out below is a list of the Public Acts of Parliament which received the Royal Assent between September, 1959, and September, 1960. The date stated after each Act is the date on which it came into operation. In many cases the object of the Statute is stated shortly, but in some instances the provisions of the Act are considered in more detail.

Mr. Speaker Morrison's Retirement Act, 1959 (December 17, 1959) secures annuities on the Right Honourable William Shepherd Morrison, and after his death on his wife, Catherine Allison Morrison, in consideration of his eminent services.

Post Office and Telegraph (Money) Act, 1959 (December 17, 1959) provides further money for capital expenses of the Post Office.

Marshall Scholarships Act, 1959 (December 17, 1959) increases to twenty-four the maximum number of Marshall scholarships.

Expiring Laws Continuance Act, 1959 (December 17, 1959) continues in force certain enactments that would otherwise expire.

Atomic Energy Authority Act, 1959 (December 17, 1959) increases the maximum membership of the United Kingdom Atomic Energy Authority to sixteen, and enables the Authority to include in their pension schemes staff of the National Institute for Research in Nuclear Science.

Commonwealth Scholarships Act, 1959 (December 17, 1959) makes provision for matters arising out of the recommendations of the Commonwealth Education Conference.

Sea Fish Industry Act, 1959 (December 17, 1959) increases the aggregate amount of white fish and herring subsidies and the aggregate amount of grants towards new vessels and engines, and contains various other provisions relating to sea fishing.

Lord High Commissioner (Church of Scotland) Act, 1959 (December 17, 1959) increases the allowance payable to H.M. High Commissioner to the General Assembly of the Church of Scotland to a maximum of £7,500.

Judicial Pensions Act, 1959 (December 17, 1959) amends the law with respect to the pensions and other benefits attaching to certain high judicial offices, and provides for the retirement of the holders of such offices at seventy-five (with qualifications for existing holders).

Consolidated Fund Act, 1960 (March 22, 1960) authorizes the application of money out of the Consolidated Fund to the service of the years ending on March 31, 1960 and 1961.

Foreign Service Act, 1960 (March 22, 1960) amends the law as to the superannuation benefits

which may be granted to or in respect of certain members of H.M. foreign service.

DISTRESS FOR RATES ACT, 1960 (April 1, 1960) consolidates, with corrections and improvements, certain enactments relating to the recovery of rates.

AIR CORPORATIONS ACT, 1960 (March 22, 1960) increases the borrowing powers of the British Overseas Airways Corporation and the British European Airways Corporation.

CINEMATOGRAPH FILMS ACT, 1960 (various dates) amends the Cinematograph Films Acts, 1938 and 1948, and among other things extends the period during which exhibitors must include British films among the films exhibited by them to the public.

WATER OFFICERS COMPENSATION ACT, 1960 (day to be appointed) amends the law relating to compensation for officers and servants of water undertakers.

ROAD TRAFFIC ACT, 1960 (various dates) consolidates with corrections and improvements numerous enactments relating to road traffic.

COAL INDUSTRY ACT, 1960 (March 22, 1960) authorizes the making of further advances to the National Coal Board for capital purposes.

LOCAL EMPLOYMENT ACT, 1960 (day to be appointed) makes provision for promoting employment in localities in England, Scotland and Wales where high and persistent unemployment exists or is threatened. Power is given to the Board of Trade to acquire land and to erect buildings, and the Board may make grants to persons carrying on undertakings in such localities. Numerous other provisions facilitate the general object of the Act.

EUROPEAN FREE TRADE ASSOCIATION ACT, 1960 (March 22, 1960) makes provision for matters arising out of the establishment of the European Free Trade Association or otherwise out of agreements relating to trade made with members of the Association.

REQUISITIONED HOUSES ACT, 1960 (March 22, 1960) enables the Minister of Housing and Local Government to extend until March 31, 1961, the period for which any local authority may retain possession of requisitioned houses.

WAGES ARRESTMENT LIMITATION (AMENDMENT) (SCOTLAND) ACT, 1960 (April 22, 1960) increases the amount of wages excepted from arrestment under the Wages Arrestment Limitation (Scotland) Act, 1870.

HORTICULTURE ACT, 1960 (Part I, March 22, 1960; Part II, day to be appointed) makes provision for assisting the production and marketing of horticultural produce. Part I enables grants of an amount equal to one-third of the expenditure reasonably incurred in carrying out approved proposals for the provision of specified facilities for the purposes of a horticultural production business to be made to the person carrying on that business or to the landlord of land occupied for the purposes of such a business. Among other things, horticultural produce includes fruit, vegetables grown for human consumption, flowers, herbs and trees (not grown for the purpose of afforestation), but does not include hops. Part II of the Act establishes the Horticultural Marketing Council with functions in relation to horticultural marketing.

FIRST OFFENDERS (SCOTLAND) ACT, 1960 (May 13, 1960) restricts the imprisonment of first offenders in Scotland by providing that a court of summary jurisdiction shall not impose imprisonment on a first offender of twenty-one or more unless the court is of opinion that no other method of dealing with him is appropriate.

PAWNBROKERS ACT, 1960 (May 13, 1960) amends the Pawnbrokers Acts of 1872 and 1922 by increasing the maximum loan within the Acts to £50, reducing the period for redemption of a pledge to six months, increasing certain permitted charges, *e.g.*, for a pawn ticket, allowed to a pawnbroker, and by making certain other changes.

WAR DAMAGE (CLEARANCE PAYMENTS) ACT, 1960 (April 13, 1960) validates payments made by the War Damage Commission before the passing of the Act in respect of the clearance of war-damaged land, and makes further provision for such payments by the Commission.

IRON AND STEEL (FINANCIAL PROVISIONS) ACT, 1960 (April 13, 1960) authorizes the payment out of the Consolidated Fund of loans to be made for capital purposes by the Minister of Power in pursuance of arrangements under the Iron and Steel Act, 1953.

GAS ACT, 1960 (April 13, 1960) increases the amount which may be borrowed by the Gas Council and Area Boards under the Gas Act, 1948, and amends the 1948 Act with respect to the expenses of the Minister in connection with the testing of gas for compliance with prescribed standards.

LEGAL AID ACT, 1960 (April 13, 1960) relaxes the financial conditions for legal aid by altering the limits on disposable income and disposable capital, and the maximum amount of the contribution to the legal aid fund, and makes further provision for the remuneration of counsel and solicitors in connection with legal aid. (*See* Legal Notes.)

MARRIAGE ENABLING ACT, 1960 (April 13, 1960) extends provisions of the Marriage Act, 1949, which enabled a person to marry certain relatives of his or her deceased spouse, to cases where the first spouse is still living. (*See* Legal Notes.)

OCCUPIER'S LIABILITY (SCOTLAND) ACT, 1960 (September 2, 1960) amends the law of Scotland as to the liability of occupiers and others for injury or damage occasioned to persons or property on any land or other premises by reasons of the state of the premises or of anything done or omitted to be done thereon.

HIGHLANDS AND ISLANDS SHIPPING SERVICES ACT, 1960 (June 2, 1960) extends to Scotland only, and authorizes the Secretary of State to assist persons concerned with the provision of sea transport services serving the Highlands and Islands, *i.e.* the counties of Argyll, Caithness, Inverness, Orkney, Ross and Cromarty, Sutherland and Zetland.

POPULATION (STATISTICS) ACT, 1960 (various dates) gives permanent effect to the Population (Statistics) Act, 1938, and amends the Births and Deaths Registration Act, 1953, as regards certificates of still-birth.

INDECENCY WITH CHILDREN ACT, 1960 (July 2, 1960) provides that any person who commits an act of gross indecency with a child under fourteen, or who incites a child under that age to such an act with him or another shall be liable on conviction on indictment to imprisonment for a term not exceeding two years or on summary conviction to imprisonment for a term not exceeding six months, to a fine not exceeding £100, or to both. The Act also increases the length of imprisonment which may be awarded for certain offences against young girls.

RADIOACTIVE SUBSTANCES ACT, 1960 (June 2, 1960) regulates the keeping and use of radioactive material, and makes provision as to the disposal and accumulation of radioactive waste. With certain exceptions, persons keeping, on any premises used for a trade, business or profession, any radioactive material, must be registered under the Act, as must any person who keeps mobile radioactive apparatus for the provision of certain services.

INTERNATIONAL DEVELOPMENT ASSOCIATION ACT, 1960 (June 2, 1960) enables effect to be given to

an international agreement for the establishment and operation of an International Development Association.

GAME LAWS (AMENDMENT) ACT, 1960 (August 2, 1960) enables a police constable to arrest a person found on land trespassing in pursuit of game by night, and permits a police constable to demand the name and address of a person found in pursuit of game in the daytime and to require him to quit the land. Further, a police constable who has reasonable grounds for suspecting that a person is trespassing in pursuit of game by day or night may enter on the land to exercise the above powers. Other provisions of the Act confer additional powers of search and seizure on police constables and powers of forfeiture upon any court before which a person is convicted of certain poaching offences, and increase the penalties for certain offences.

PAYMENT OF WAGES ACT, 1960 (various dates) removes certain restrictions imposed by the Truck Acts on the methods of payment of wages to employees to whom these Acts apply. Subject to certain specific provisions, and only at the request of the employee, wages may be paid otherwise than in cash in one of four ways—(i) by payment into a banking account standing in the name of the employee; (ii) by postal order; (iii) by money order; or (iv) as from a day to be appointed, by cheque. A request for payment into a banking account must specify the bank and branch and the name in which the account stands; cheques must be made payable to or to the order of the employee; no deduction from wages may be made by reason of the way in which payment is requested; a written statement giving details of how the amount is made up must be given to the employee at or before the time of payment. Requests may be cancelled by written notice given by employer or employee or by agreement between them. The Act also contains numerous supplementary provisions relating to the above matters.

CIVIL AVIATION (LICENSING) ACT, 1960 (to be appointed; some sections on July 26, 1960) establishes an Air Transport Licensing Board with the general duty of exercising certain functions under the Act in such a manner as to further the development of British civil aviation. The Act provides that no aircraft shall be used on any flight for reward or in connection with any trade or business except under and in accordance with the terms (i) of such air operator's certificate as is required under the provisions of the Civil Aviation Act, 1949, and (ii) unless otherwise provided by the Minister, of an air service licence granted to the operator of the aircraft by the Air Transport Licensing Board authorizing the operator to operate aircraft on the flight in question. The Act also prohibits aerial advertising and propaganda save in such circumstances as may be prescribed.

DOCK WORKERS (PENSIONS) ACT, 1960 (June 2, 1960) provides that nothing in the Truck Acts is to prevent the deduction, in pursuance of a scheme under the Dock Workers (Regulation of Employment) Act, 1946, of employees' contributions due under a pensions scheme from the employees' wages.

COMMONWEALTH TEACHERS ACT, 1960 (June 2, 1960) enables payment to be made for certain purposes concerned with educational co-operation between Commonwealth countries.

GHANA (CONSEQUENTIAL PROVISION) ACT, 1960 (June 2, 1960) provides that, until provision is made to the contrary, all laws of the United Kingdom, Southern Rhodesia, a colony, protectorate or U.K. trust territory, existing on and after the date when Ghana became a Republic shall have the same operation in relation to Ghana and persons and things connected with Ghana as if it had not become a Republic. Provision is also made in relation to appeals from Ghana pending before the Judicial Committee of the Privy Council.

MERCHANT SHIPPING (MINICOY LIGHTHOUSE) ACT, 1960 (June 2, 1960) enables the lighthouse on Minicoy Island and sums held in the General Lighthouse Fund in connection therewith to be transferred to the Government of India.

ABANDONMENT OF ANIMALS ACT, 1960 (June 2, 1960) provides penalties for abandonment of animals.

FINANCE ACT, 1960 (various dates) provides for additional Income Tax relief for widows and others in respect of children, increase of reliefs for housekeeper, dependent relative, etc., and relief for National Insurance contributions; contains detailed tax provisions with regard to sale of shares in various circumstances, payments on retirement or removal from an office or employment and capital allowances for certain business or estate management expenditure. It also contains new provisions as to penalties and recovery of tax in connection with incorrect returns; and the graduation of charge of estate duty on gifts where the donor dies within 5 years.

CORPORATE BODIES' CONTRACTS ACT, 1960 (July 29, 1960) allows contracts on behalf of any body corporate (other than a company under the Companies Act, 1948) to be made, varied, or discharged in writing, where that contract if made between private persons would be valid if made in writing; or by parole only where private persons could validly so contract.

The Act does not apply to the making, variation or discharge of a contract before the commencement of the Act.

HOUSE OF COMMONS MEMBERS' FUND ACT, 1960 (July 29, 1960) extends the powers of investment of the trustees of the House of Commons Members' Fund.

ROAD TRAFFIC (AMENDMENT) ACT, 1960 (July 29, 1960) enables a licence to drive motor vehicles to be granted to persons who have held licences to drive such vehicles in Northern Ireland, the Isle of Man or any of the Channel Islands.

ADOPTION ACT, 1960 (July 29, 1960) amends the law with respect to the revocation of adoption orders in cases of legitimation, and provides that such a revocation, under this Act, or under Section 26 of the Adoption Act, 1958, shall not affect the operation of the Act of 1958 in relation to an intestacy which occurred, or a disposition which was made, before the revocation.

APPROPRIATION ACT, 1960.

BETTING AND GAMING ACT, 1960.

BUILDING SOCIETIES ACT, 1960.

CARAVAN SITES AND CONTROL OF DEVELOPMENT ACT, 1960.

CHARITIES ACT, 1960.

CLEAN RIVERS (ESTUARIES AND TIDAL WATERS) ACT, 1960.

CYPRUS ACT, 1960.

FILMS ACT, 1960.

MATRIMONIAL PROCEEDINGS (MAGISTRATES' COURTS) ACT, 1960.

MENTAL HEALTH (SCOTLAND) ACT, 1960.

NIGERIA INDEPENDENCE ACT, 1960.

OFFICES ACT, 1960.

OIL BURNERS (STANDARDS) ACT, 1960.

PUBLIC HEALTH LABORATORY SERVICE ACT, 1960.

ROAD TRAFFIC AND ROAD IMPROVEMENTS ACT, 1960.

STATUTE LAW REVISION ACT, 1960.

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, *e.g.* the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Watereguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

ADMIRALTY

(*see* Royal Navy)

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1. †
[Trafalgar: 7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed the responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

It is responsible generally for the efficiency of the agricultural, horticultural and fishing industries in England and Wales; this involves:—grant and subsidy schemes and the provision of certain trading services; schemes designed to improve the quality of livestock and agricultural produce, to control or eradicate animal diseases, plant diseases, and pests, and to facilitate production on marginal land; market intelligence and technical advice on food production; agricultural education, research applied to agriculture, horticulture and fisheries, and land drainage, enforcement of agricultural wages awards, safety, welfare and labour supply. With other Government Departments, the Ministry is concerned with improving such rural services as housing, farm buildings, water supplies and electricity, with the supply of machinery, fertilisers and seeds and with land use. It is also concerned with the purchase and sale of land by the Minister and with general land management questions.

The Ministry administers, in England and Wales, the guarantees to farmers under the *Agriculture Acts*, 1947 and 1957, including deficiency payments schemes for fatstock and for the main cereal crops. It is also generally responsible for schemes for milk, eggs, potatoes and wool operated through producers' marketing boards.

The Ministry is concerned with the interests and development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition of food, labelling and advertising. It is responsible for research applied to food nutrition for technology and defence and for matters concerning slaughterhouses and meat inspection, and for legislation relating to the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and contributes to the work of a number of international bodies, in regard to agriculture and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew, and the Ordnance Survey Department.

Minister of Agriculture, Fisheries and Food, THE RT. HON. (ARTHUR) CHRISTOPHER (JOHN) SOAMES, C.B.E., M.P. £5,000
Private Sec., J. R. Moss.

† Unless otherwise stated, Divisions of the Ministry are at this address.

Assistant Private Secs., D. H. Andrews; Miss G. D. McElnea.
Parliamentary do., A. B. C. Harrison, M.P. . . *unpaid*
Parliamentary Clerk, M. F. Grant ..... £1,450 to £1,800
Parliamentary Secretaries, The Earl Waldegrave, T.D.; J. B. Godber, M.P. £2,500
Private Secretaries, Miss G. Gunner; G. O. Kermode.
Permanent Secretary, Sir John Winnifrith, K.C.B. £7,000
Chief Scientific Advisers, (*Agriculture*) Professor H. G. Sanders, £5,000, (*Food*) Dr. H. R. Barnell £3,500
Liaison Officers, E. M. Howard; Major J. W. Fitzherbert-Brockholes, C.B.E., M.C.; The Lord de Ramsey, T.D.; Col. Sir Robert Gooch, Bt., D.S.O.; E. G. E. Griffith; The Earl of Malmesbury, T.D.; E. G. Parsons; R. Phillips, D.SC.; Col. N. V. Stopford Sackville, O.B.E., T.D.; Sir Donald Scott; D. Skilbeck, C.B.E.; R. W. Trumper, C.B.E.; Lt.-Col. R. B. Verdin, O.B.E., T.D., Capt. N. G. Garnons Williams, M.B.E., R.N. (*ret.*) ..... *unpaid*

Administrative Departments

GROUP A

Deputy Secretary, G. P. Humphreys-Davies, C.B. £5,000

SUB-GROUP (1)

Under Secretary, A. C. Sparks £3,800

AGRICULTURAL ECONOMICS DIVISION

Chief Agricultural Economist, L. Napolitan £2,750 to £3,050
Senior Principal Agricultural Economists, J. Ashton; E. A. G. Shrimpton ..... £2,350 to £2,650
Principal Agricultural Economists, B. E. Cracknell; K. Dexter; J. A. Evans ..... £1,460 to £2,070
Statisticians, E. L. Snowdon; Mrs. G. Cartwright; Miss A. O. G. Tanner ..... £1,650 to £2,325
Chief Executive Officer, P. G. Ellis £1,900 to £2,200
Senior Executive Officers, E. O. Forsberg, M.B.E.; V. T. Humphreys ..... £1,450 to £1,800

AGRICULTURAL GUARANTEES DIVISION

Assistant Secretary, A. Propper, M.B.E. £2,350 to £2,950
Principal, G. R. Woodward .... £1,650 to £2,325

INVESTIGATION DIVISION
Great Westminster House, Horseferry Road, S.W.1
[Victoria: 8511]

Assistant Director,* Major Gen. H. L. Davies, C.B., C.B.E., D.S.O., M.C. ..... £1,900 to £2,200
Senior Executive Officer, E. H. Lawrence £1,450 to £1,800

SUB-GROUP (2)

Under Secretary, J. H. Kirk, C.B.E. £3,800

ECONOMIC ADVICE AND MARKETING DIVISION

Principals, Miss M. J. Crighton; A. L. Irving £1,650 to £2,325
Senior Executive Officers, P. M. Reason; A. D. Thomas ..... £1,450 to £1,800

STATISTICS DIVISION

Chief Statistician, C. J. Brown .. £2,350 to £2,950
Statisticians, A. H. J. Baines; S. Clayton £1,650 to £2,325
Chief Executive Officer, A. N. Croxford £1,900 to £2,200
Senior Executive Officer, A. V. Buddin £1,450 to £1,800

SUB-GROUP (3)

Under Secretary, W. C. Tame..... £3,800

MILK, MILK PRODUCTS AND WELFARE FOODS DIVISION

Great Westminster House, Horseferry Road, S.W.1
[Victoria: 8511]

Assistant Secretary, C. E. Coffin.. £2,350 to £2,950
Head of Branch, R. C. Simpkin.. £2,500 (*personal*)
Principals, Mrs. J. J. Tait; F. C. White, O.B.E. £1,650 to £2,325
Senior Executive Officers, L. G. Denton; F. J. Farrell; Miss G. E. Pegler..... £1,450 to £1,800
Senior Technical Officer, E. L. Jarvis £1,395 to £1,660
Chief Milk Officer, G. T. Morgan £2,550 to £2,900
Milk Officers, J. Beever; J. Boag; H. J. Brooks; Miss E. L. Coleman; T. I. Jones; A. H. Moseley; C. C. Orwin; S. Swift, M.B.E. £1,580 to £2,255

MEAT AND LIVESTOCK DIVISION

Assistant Secretary, C. H. A. Duke £2,350 to £2,950
Principals, F. J. S. Culley; N. Easterbrook, G. E. Myers..... £1,650 to £2,325
Senior Executive Officers, H. C. Carter, M.B.E.; G. C. Hampson; K. P. Stones..... £1,450 to £1,800
Marketing Officer Grade II, H. J. Meredith £1,410 to £1,630
Director, National Stud, P. Burrell, C.B.E..... £2,800

FATSTOCK MARKETING DIVISION

Government Building, Epsom Road, Guildford, Surrey
[Guildford: 68121]

Assistant Secretary, P. H. Andrews, C.B.E. £2,350 to £2,950

(West Riding)*); E. R. Jackson, C.B.E. (*Yorks. (North Riding)*); F. O. Jones, O.B.E. (*Brecon*); J. G. Jones (*Merioneth*); I. H. Lamb (*Cambs.*); W. J. Layton, O.B.E. (*Hereford*); H. Lewis (*Radnor*); D. F. Macaulay (*Essex*); The Earl of Malmesbury, T.D. (*Hants*); G. Matthews, M.B.E. (*Flint.*); H. J. Owen (*Caernarvon*); E. G. Parsons (*Wilts.*); D. Prince (*Derbyshire*); The Lord de Ramsey, T.D. (*Hunts. and Soke of Peterborough*); H. J. Rathbone, O.B.E. (*Denbigh*); G. B. Read (*Lincs. (Lindsey)*); G. Richards (*Glamorgan*); W. J. S. Richards (*Carmarthen*); A. S. Rickwood, M.B.E. (*Isle of Ely*); E. K. Roberts (*Middlesex*); W. J. Simmons, O.B.E. (*Berks.*); Col. N. V. Stopford Sackville, O.B.E., T.D. (*Northants.*); H. W. Standring (*Warwicks.*); R. A. Stark (*Isle of Wight*); R. Thompson, O.B.E. (*Durham*); Lt.-Col. R. B. Verdin, O.B.E., T.D. (*Cheshire*); F. W. Ward (*Salop*); G. Comer White (*Somerset*); P. M. Williams, O.B.E. (*Cornwall*).

AGRICULTURAL LAND COMMISSION

26 Sussex Place, Regent's Park, N.W.1
[Ambassador: 1631]

The Agricultural Land Commission, set up under the *Agriculture Act*, 1947, is responsible for the management of land vested in the Minister of Agriculture, Fisheries and Food, or for which he has become responsible (150,140 acres approx.). The Commission advises the Minister in matters relating to the management of agricultural land and on the exercise of his powers of compulsory purchase under the Act, to ensure the full and efficient use of agricultural land.

Chairman (part-time), Sir Frederick Burrows, G.C.S.I., G.C.I.E. £1,500
Deputy-Chairman (part-time) and Chairman of Welsh Sub-Commission, Col. J. C. Wynne Finch, C.B.E., M.C. £1,000
Other Commissioners (part-time), W. C. Farnsworth, C.B.E.; E. Watson Jones, C.B.E.; Sir Francis Verner Wylie, G.C.I.E., K.C.S.I. ..... each £500
Secretary, C. Gallehawk ..... £1,950 to £2,250
Land Agent, E. T. King (+*allce.*) £1,790 to £2,070
Welsh Sub-Commissioners (part-time), J. Gwyn Jones; Prof. R. Alun Roberts, Ph.D.; J. N. Vaughan Richards, T.D. ..... each £500
Secretary (Welsh Sub-Commission), R. Davies £1,450 to £1,800
Land Agent (do.), E. O. Hughes £1,285 to £1,730

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W.1

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the provisions of the *Agricultural Research Act*, 1956, the Council is charged, under a Committee of the Privy Council, with the organization and development of agricultural and food research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council's finance is, under the 1956 Act, derived from the Agricultural Research Fund into which monies provided by Parliament for the purpose of the Act, and other sums received by the Council, are paid.

Council, The Duke of Northumberland, K.G. (*Chairman*); D. Lowe, C.B.E. (*Deputy Chairman*); J. D. Alston; Prof. T. A. Bennet-Clark, Ph.D., F.R.S.; Prof. H. W. R. Brambell, D.Sc., Ph.D., F.R.S.; H. G. Button; R. E. Glover, D.Sc; Prof. J. W. Howie, M.D.; Elwyn Jones, O.B.E.; Prof. Sir Hans Krebs, M.D., D.Sc., F.R.S.; Prof. K. Mather, C.B.E., D.Sc., Ph.D., F.R.S.; Prof. P. B. Medawar, C.B.E., D.Sc., F.R.S.; The Lord Netherthorpe; J. N. Ritchie, C.B.; Prof. A. Robertson, Ph.D., LL.D., F.R.S.; Prof. F. W. Rogers; Prof. H. G. Sanders, Ph.D.; W. H. Senior, F.R.S.E.; Prof. S. J. Watson, C.B.E., D.Sc., F.R.S.E.

Secretary, E. G. Cox, T.D., D.Sc., F.R.S.
Deputy Secretary, W. G. Alexander, C.B.E.
Assistant Secretaries, E. D. T. Jourdain; W. Ness, C.B.E.; A. Oates.
Scientific Assistants to the Secretary, E. E. Cheesman, D.Sc.; R. Scarisbrick, Ph.D.; G. G. Samuel; F. H. Moult; D. Rudd Jones, Ph.D.
Principals, J. S. F. Law; L. S. Porter.
Chief Executive Officer, J. H. Shimwell.
Senior Executive Officers, F. V. Bird; K. H. J. Clarke.

For the Research Institutes under the control of the council, *see Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the various Commonwealth Governments, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth and Empire. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, C. K. Reheem.
Vice-Chairman, V. Armstrong, Ph.D.
Secretary, A. E. Trotman, C.M.G.

Institutes

Commonwealth Institute of Entomology, Natural History Museum, S.W.7. *Director*, E. O. Pearson.
Commonwealth Mycological Institute, Ferry Lane, Kew, Surrey. *Director*, J. C. Hopkins, D.Sc.
Commonwealth Institute of Biological Control, K. W. Neatby Building, Carling Avenue, Ottawa, Ontario, Canada. *Director*, F. J. Simmonds, Ph.D.

Bureaux

Animal Breeding and Genetics, Institute of Animal Genetics, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—*Director*, J. P. Maule.
Animal Health, Central Veterinary Laboratory, New Haw, Weybridge, Surrey.—*Director*, M. Crawford.
Animal Nutrition, Rowett Research Institute Bucksburn, Aberdeen, Scotland.—*Director*, D. Harvey, Ph.D.
Dairy Science and Technology, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.
Forestry, Imperial Forestry Institute, South Parks Road, Oxford.—*Director*, F. C. Ford Robertson, O.B.E.
Helminthology, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, J. M. Watson, D.Sc.
Horticulture and Plantation Crops, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, G. K. Argles.

Commonwealth Bureau of Pastures and Field Crops, Hurley, nr. Maidenhead, Berks.—*Director*, A. G. G. Hill.

Plant Breeding and Genetics, School of Agriculture, Downing Street, Cambridge—*Director*, P. S. Hudson, O.B.E., Ph.D.

Soils, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, G. V. Jacks.

AIR MINISTRY

(*see* Royal Air Force)

COLLEGE OF ARMS OR HERALDS COLLEGE

Queen Victoria Street, E.C.4

[City: 2762]

The College of Arms is open daily from 10–4 and an Officer of Arms is always in attendance to deal with enquiries by the public. But such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who all specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Hon. Sir George Rothe Bellew, K.C.V.O., F.S.A.

Clarenceux, Sir John Dunamace Heaton-Armstrong, M.V.O.

Norroy and Ulster, Aubrey John Toppin, M.V.O., F.S.A.

Heralds

Richmond, Anthony Richard Wagner, C.V.O., F.S.A.

Windsor, Richard Preston Graham-Vivian, M.C. (*and Earl Marshal's Secretary*).

Somerset, Michael Roger Trappes-Lomax.

Lancaster (*and Registrar*), John Riddell Bromhead Walker, M.V.O., M.C.

York, The Lord Sinclair, M.V.O.

Chester (vacant).

Pursuivants

Rouge Dragon, Robin de la Lanne Mirrlees.

Rouge Croix, Walter John George Verco, M.V.O.

Bluemantle, John Philip Brooke Brooke-Little.

Portcullis, Alexander Colin Cole.

COURT OF THE LORD LYON

H.M. Register House, Edinburgh

[Edinburgh: 30137]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Seanachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birthbrieves. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, K.C.V.O., LL.D., F.S.A.*Scot.*, Advocate £1,200

Three Heralds (£25 each)

Rothesay, Lt.-Col. H. A. B. Lawson, F.S.A. *Scot.*

Albany, Major Charles Ian Fraser of Reelig.

Marchmont, James Monteith Grant, W.S.

Three Pursuivants (£16 13s. 4d. each)

Unicorn, Sir Iain Moncreiffe of Moncreiffe, Bt., Ph.D., Advocate.

Kintyre, Charles Eliot Jauncey, Advocate.

Carrick, Malcolm Rognvald Innes of Edingight.

Linlithgow (*Extraordinary*), John I. D. Pottinger.

Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson. £900

Procurator-Fiscal, Malcolm Robertson MacGregor, W.S.

Herald Painter, Mrs Katherine Chart.

Macer, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

5 Old Palace Yard, S.W.1

[Whitehall: 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of Our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Lord Bridges, P.C., G.C.B., G.C.V.O., M.C., F.R.S.

Commissioners, Sir Colin Anderson; John Betjeman, C.B.E.; Hon. Lionel Brett; Louis de Soissons,

C.V.O., O.B.E., R.A.; Frederick Gibberd, C.B.E.; Sir William Holford; G. A. Jellicoe; Sir Leslie Martin; Henry Moore, C.H.; John Piper; Sir Allan Quartermaine, C.B.E., M.C.; J. M. Richards, C.B.E.; Sir Arthur Richmond, C.B.E.; Sir Basil Spence, O.B.E., T.D., R.A.; Prof. Geoffrey Webb, C.B.E.

Secretary, Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR SCOTLAND

Royal Scottish Museum, Edinburgh 1

[Tel.: Edinburgh Caledonian: 7534]

Appointed in 1927 "to enquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of our Departments of State, and to report thereon to such Departments; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies when it appears to the said Commission that their assistance would be advantageous." Under Royal Warrant of May 8, 1953, the terms of reference of the Commission were extended so that it is now open to the Commission, if it so desires, to call the attention of any Department of State or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the Commission may appear to affect amenities of a national or public character; and to call before it any persons, examine any documents or visit any places it might deem expedient for the more effectual carrying out of its duties.

Commissioners, Sir Hector Hetherington, K.B.E. (*Chairman*); Lady MacGregor of MacGregor, O.B.E.; Charles d'O. Pilkington-Jackson, A.R.S.A.; J. Cameron Smail, O.B.E., LL.D., F.R.S.E.; William H. Kininmonth, R.S.A., F.R.I.B.A.; R. H. Matthew, C.B.E., A.R.S.A.; Ian G. Lindsay, O.B.E., A.R.S.A., F.R.I.B.A.; The Earl Haig.

Secretary, Ian Finlay.

NATIONAL GALLERY

Trafalgar Square, W.C.2

[Whitehall: 7628–9]

Hours of opening.—Weekdays 10 to 6 (June–Sept., Thursdays 10 to 9), Sundays 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1928, 1930 and 1937. Expenses for 1960–61 were estimated at £205,449.

TRUSTEES

Brinsley Ford; Sir Thomas Merton, K.B.E., F.R.S.; J. C. Witt; Henry Moore, C.H.; Denis Mahon; Sir William Coldstream, C.B.E.; The Viscount Chandos, P.C., D.S.O., M.C.; The Marquess of Salisbury, K.G., P.C., F.R.S.; The Earl of Plymouth; The Lord Robbins, C.B., F.B.A.; The Duke of Devonshire, M.C.

OFFICERS

Director, Sir Philip Hendy £3,800
Keeper, M. Davies ..... £2,400 to £2,700
Deputy Keeper, N. MacLaren ... £1,975 to £2,400
Deputy Keeper and Scientific Adviser to the Trustees. R. H. G. Thomson ..... £1,975 to £2,400
Assistant Keepers, C. H. M. Gould; M. V. Levey £1,217 to £1,915
Chief Restorer, A. W. Lucas ..... £1,925 to £2,305

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2

[Whitehall: 8511]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £4,090 for purchase of portraits, was estimated at £38,262 for 1960–61.

Director, Keeper and Secretary, C. K. Adams, C.B.E. £2,850
Assistant Keepers (*I*), D. T. Piper; J. F. Kerslake £1,217 to £1,915

TATE GALLERY

Millbank, S.W.1

[Tate Gallery: 4444]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Admission free, except to certain temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery, which constitutes the National Collection of British painting, of modern foreign painting and of modern sculpture, was opened in 1897, the cost of erection (£80,000), being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The *Turner Wing*, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1910. There are also special collections by Blake, Watts and Alfred Stevens. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1960–61 were estimated at £109,718.

Director, Sir John Rothenstein, C.B.E., Ph.D.. £3,300
Keeper, N. R. Reid ..... £2,400 to £2,700
Deputy Keeper, R. E. Alley ..... £1,975 to £2,400
Assistant Keepers (*Grade I*), Mary Chamot; Judith Cloake; D. L. A. Farr; M. R. F. Butlin.
Men, £1,217 to £1,915; *Women*, £1,189 to £1,882

WALLACE COLLECTION

Hertford House, Manchester Square, W.1

[Welbeck: 0687–8]

Admission free. Open on weekdays 10 a.m. to 5 p.m.; Sundays 2 p.m. to 5 p.m. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir Richard Wallace, Bt., K.C.B., M.P., on her death in 1897, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, sculpture, bronzes, porcelain, armour and miscellaneous *objets d'art*. The total net expenses were estimated at £43,608 in 1960–61.

Director, Sir James Mann, K.C.V.O. £2,700
Assistant Directors, F. J. B. Watson; R. A. Cecil £1,217 to £1,915

NATIONAL GALLERIES OF SCOTLAND

Mound, Edinburgh

[Edinburgh Caledonian: 6824]

Comprising:—
National Gallery of Scotland, Mound, Edinburgh, 1.
Scottish National Portrait Gallery, Queen Street, Edinburgh 2.
Director of the National Galleries of Scotland, David K. Baxandall, C.B.E. £2,950

Keeper of Paintings, C. E. Thompson £1,185 to £1,865
Keeper of Prints and Drawings, K. K. Andrews £1,185 to £1,865
Keeper, Scottish National Portrait Gallery, Robert E. Hutchison ... (+*allce.* £155) £1,185 to £1,865
Secretary, Accountant and Establishment Officer, R. J. Inglis ..... £1,450 to £1,800

UNITED KINGDOM ATOMIC ENERGY AUTHORITY

11 Charles II Street, S.W.1
[Whitehall: 6262]

Established by the *Atomic Energy Authority Act*, 1954, the Authority took over, on August 1, 1954, the control of atomic energy research and development. The Minister for Science is responsible to Parliament for general atomic energy policy and for money provided for the Authority.

The Authority is organized in four groups. Each full-time technical Member of the Authority is responsible for a particular group as shown below:—

(*a*) the *Research Group*. The Research Establishment at Harwell, Berks., conducts fundamental research into nuclear physics and atomic energy and provides information to the other establishments. It includes the Isotope School (1951) and Reactor School (1954). The Radiochemical Centre at Amersham, Bucks., prepares radio-active substances such as radium, radon and isotopes produced in the atomic piles, for medical, scientific and industrial purposes. The Group also includes the Atomic Energy Establishment which is being developed at Winfrith Heath, Dorset.

(*b*) the *Weapons Group*. Research work on atomic weapons is carried on at the Research Establishment, Aldermaston, Berks.

(*c*) the *Development and Engineering Group*. Responsible for the design, construction and development of reactors and associated plant; engineering consultant work for the Electricity Boards, overseas organizations and groups of industrial firms formed for the building of nuclear power stations; general design and construction of all major building projects in the Authority as a whole. Headquarters of the Group are at Risley, Lancs., with an establishment at Dounreay (Caithness) (Experimental Reactor Establishment) and laboratories at Culcheth (Lancs.). The Group also includes the research and development organization at Capenhurst (Cheshire), Windscale (Cumberland) and Springfields (Lancs.).

(*d*) the *Production Group*. Responsible for the operation of the Authority's factories; research and development in aid of factory processes; and other commercial activities. Headquarters: Risley, with plants at Capenhurst (Cheshire), Springfields (Lancs.), Windscale and Calder (Cumberland) and Chapelcross (Dumfriesshire).

Chairman, Sir Roger Makins, G.C.B., G.C.M.G. £10,000

Members, (*Full-time*) Sir William Penney, K.B.E., F.R.S. (*Scientific Research*); Sir William Cook, C.B. (*Development and Engineering*); Sir Alan Hitchman, K.C.B. (*Finance and Administration*); Sir Leonard Owen, C.B.E. (*Production*).....*each* £7,500
Air Chief Marshal Sir Claude Pelly, G.B.E., K.C.B., M.C., (*Weapons Research*).....£6,500
(*Part-time*) Sir John Cockcroft, O.M., K.C.B., C.B.E., F.R.S.....£3,000
The Lord Citrine, P.C., G.B.E.; C. F. Kearton, O.B.E.; Sir Rowland Smith; Sir James Chadwick, M.D., F.R.S.; S. J. Pears.....*each* £1,000

Secretary, D. E. H. Peirson.

MINISTRY OF AVIATION

Shell Mex House, Strand, W.C.2
[Gerrard: 6933]

The Ministry of Aviation is responsible for the supply of aircraft to the Services and undertakes research on and development of aircraft, electronic equipment, etc., for the Services, and of certain classes of equipment for civil use, *e.g.*, civil aircraft and industrial gas turbines. The Ministry undertakes the organization, implementation and encouragement of measures for the development of civil aviation; the promotion of safety and efficiency in the use of aircraft; research concerning navigation and operation of civil aircraft; general oversight of the activities of the Air Corporations; the investigation of aircraft accidents; the licensing and supervision of training arrangements for aircrews; the operation of over thirty civil aerodromes, air traffic control and telecommunications services.

Minister of Aviation, THE RT. HON. (GEORGE EDWARD) PETER THORNEYCROFT, M.P. . £5,000
Private Secretaries, N. Craig; R. F. Prosser, M.C.; J. Caines (*Assistant*)
Parliamentary Private Secretary, Wing Cdr. E. E. Bullus, M.P. *unpaid*
Parliamentary Secretary, A. G. F. Rippon, M.P. £2,500
Permanent Secretary, Sir William Strath, K.C.B. £7,000
Private Secretary, G. W. Clark.
Deputy Secretary (*A.*), H. Hardman, C.B.....£5,000
Deputy Secretary (*B.*), M. M. V. Custance, C.B. £5,000
Deputy Secretary (*C.*), D. W. G. L. Haviland, C.B. £5,000
Controller of Aircraft, Sir George Gardner, K.B.E., C.B., D.Sc.....£5,000
Deputy Controller of Aircraft (*Military*), Rear Admiral J. A. Ievers, O.B.E.
Deputy Controller of Aircraft (*Research and Development*), M. B. Morgan, C.B.....£4,400
Assistant Controller of Aircraft, Air Vice-Marshal C. D. C. Boyce, C.B., C.B.E. (*ret.*).....£2,800
Controller of Guided Weapons and Electronics, Sir Steuart Mitchell, K.B.E., C.B.....£5,250
Deputy Controller of Electronics, Air Vice-Marshal T. U. C. Shirley, C.B.E.
Director-General, Atomic Weapons, Dr. B. G. Dickins, C.B.E.....£3,800
Directors, Capt. F. B. Lloyd, O.B.E., R.N. (*ret.*); W. J. Brown.....*Varying rates to* £3,100
Controller of Aviation Ground Services, Air Vice-Marshal Sir Laurence Sinclair, G.C., K.C.B., C.B.E., D.S.O. (*ret.*).....£4,400
Hon. Chief Business Adviser (*Civil*) *Aviation*, Sir Leslie Gamage, M.C.
Chief Aeronautical Adviser, Air Marshal Sir Charles Guest, K.B.E., C.B. (*ret.*).....£3,500
Chief Scientist, Sir Robert Cockburn, K.B.E., C.B. £5,800

Administration and Finance

Under-Secretaries, D. W. Bartington, C.B.; R. Burns, C.M.G.; L. H. Curzon, C.B.; F. J. Doggett; R. R. Goodison; V. P. Harries, C.B.; G. V. Hole; E. S. Jackson, C.B.; N. V. Meeres; G. I. Morris, C.B.; Mrs. A. Munro; J. H. Riddoch; J. M. Wilson, C.B.....*Men*, £3,800; *Women*, £3,763
Director of Contracts (*A.*), A. W. Isherwood, C.B.E. £3,300
Director of Contracts (*B.*), L. J. T. Clifton...£3,300
Accountant General, W. Gairns, C.B.E.....£3,300
Assistant Secretaries, W. W. Abson; D. F. Allen; J. E. Barnes; J. K. Batey; Dr. W. E. Berry; J. R. Christie; C. M. Colbeck; A. F. Cooper; T. M. Crowley; A. V. Davies, M.B.E.; R. S. S. Dickinson; S. P. Dobbs; W. G. Downey; R. S. F. Edwards (£3,500); E. S. Foster; D. F. A. R. Freeman; G. F. Gainsborough; W. C. Gawthorne; R. W. N. B. Gilling; G. A. Haig, O.B.E.; N. Hartley; E. W. G. Haynes; G. S. Hill; G. P. Jeffries; C. R. F. Lark; R. E. M. LeGoy; C. F. McFarlane; E. I. R. MacGregor; K. M. McLeod; L. C. J. Orchard; T. Paris, C.B.E.; G. T. Rogers; Miss M. L. Senior; W. P. Shovelton; Mrs. L. Silverston, O.B.E.; W. W. Simpson; R. S. Swann; R. St. J. Walker; S. R. W. Walton; L. Williams; T. M. Wilson; A. W. Wray, C.B.E.
Men, £2,400 to £3,000; *Women*, £2,367 to £2,970
Chief Information Officer, I. S. Jehu, C.I.E. £2,400 to £3,000

Inspection

Director-General of Inspection, Maj.-Gen. Sir Lancelot Cutforth, K.B.E., C.B. (*ret.*).....£4,400
Directors, Brigadier R. H. Bright, O.B.E.; R. E. Swift, C.B.E. (£3,800); D. A. Hutton-Williams (£3,000); Group Capt. D. G. Scott, O.B.E.; E. W. S. Press, C.B.E. (£2,800).
E. D. Whitehead, M.B.E. (£3,000)

Representatives of Ministry of Aviation Overseas

Director-General, Defence Research Staff (Washington). L. T. D. Williams.....£3,800
Directors, Air Commodore H. E. Dicken, O.B.E.; Brig. C. T. D. Lindsay
Head of United Kingdom Defence Research and Supply Staff, Australia, S. Scott Hall, C.B.....£4,100
Counsellor (Defence Research and Supply), Canada, F. S. Barton, C.B.E.....£3,100

Aircraft

Director-General of Aircraft Equipment Research and Development, Dr. H. M. Wilson, M.B.E...£3,800
Director-General of Aircraft General Services, A. E. Woodward-Nutt.....£3,500
Director-General of Engine Research and Development, R. H. Weir, C.B.....£3,800
Director-General of Aircraft Research and Development (R.A.F.), L. Boddington, C.B.E.....£3,800
Director-General, Scientific Research (Air), L. F. Nicholson.....£3,800
Directors, Captain E. C. Beard, R.N.; C. J. Carter; H. B. Howard; Dr. N. J. L. Megson; Dr. J. W. Drinkwater, O.B.E.; Air Commodore R. H. E. Emson, C.B.; Air Commodore W. D. Disbrey; F. G. R. Cook; R. A. Schlotel, C.B.E.; E. A. Poulton; H. Templeton; C. Moore
Varying rates to £3,600
Director, Royal Aircraft Establishment, M. J. Lighthill, F.R.S.....£5,000
Director-General, Aircraft Production, W. R. McGaw, C.B.....£3,800
Directors, H. J. Curnow, O.B.E.; B. D. Davies; H. E. Hancocke, O.B.E.....£3,000
Chief Superintendent, Aeroplane and Armament Experimental Establishment, Dr. D. Cameron
£2,750 to £3,050
Director, Air Technical Publications, S. T. L. Mansell £3,000

Guided Weapons and Electronics

Director-General, Guided Weapons, J. E. Serby, C.B., C.B.E.....£4,100
Directors, Captain R. Young, R.N.; Air Commodore W. R. Brotherhood, C.B.E.; J. D. Clare £2,500 to £2,800
Director, Royal Radar Establishment, W. J. Richards, C.B., C.B.E.....£4,000
Director-General of Electronics Research and Development, Dr. J. S. McPetrie, C.B.....£3,800
Directors, Air Commodore A. G. P. Brightmore; F. H. Scrimshaw (£3,800); Dr. C. H. Johnson, C.B.E. (£3,500); C. P. Fogg (£3,100); R. G. Friend (£3,000)
Directors, H. E. Drew (£3,000); P. E. Pollard, O.B.E. (£3,100)
Director-General of Ballistic Missiles, W. H. Stephens £3,800
Directors, J. H. Phillips (£2,900); Brig. E. W. Denison.

CIVIL AVIATION

Aviation Economics and Aircraft

Chief Statistician, A. H. Watson. £2,400 to £3,000

Aviation Safety

Director, W. E. B. Griffiths, O.B.E.
£2,600 to £2,950
Deputy Directors, N. V. Lindemere; A. M. Raffael; M. H. Vivian.....£2,050 to £2,550

Aviation Medical

Senior Medical Officer, Air Commodore, J. D. Leahy, M.C. (ret.).....£3,000

Accidents Investigation (Civil Aviation)

Chief Inspector, P. G. Tweedie, C.B.E.....£3,250

AVIATION GROUND SERVICES

Aviation Navigational Services

Director General, Group Capt. J. B. Veal, C.B.E., A.F.C.....£3,800

Aerodromes Technical

Director, G. W. Stallibrass, O.B.E..£2,600 to £2,950

Aviation Control and Navigation Development Planning

Director, V. A. M. Hunt, C.B.E...£2,600 to £2,950

Aviation Control and Navigation Operations

Director, W. M. Hargreaves, C.B.E.
£2,600 to £2,950

Telecommunications Engineering Staff

Chief Telecommunications Engineer, C. G. Phillips, O.B.E.....£3,250
Deputy Chief Telecommunications Engineer, E. L. T. Barton, O.B.E.....£2,950
Assistant Chief Telecommunications Engineers, V. Dodd, O.B.E.; S. L. Hulme, O.B.E.; J. F. Montgomerie; W. A. J. Thorn, O.B.E.
£2,350 to £2,650

Aviation Operational Research

Senior Principal Scientific Officer, G. E. Bell, Ph.D.
£2,400 to £2,700

Aviation Works Directorate

Director, C. E. Foster, C.B.E., E.R.D.

Civil Aviation Ground Services

London Airports

General Manager, R. S. F. Edwards.....£3,500
Deputy General Manager, R. W. N. B. Gilling
£2,400 to £3,000
Aerodrome Commandants, Special Grade, G. J. Warcup (*London Airport*) (£2,600 to £2,950); B. A. Oakley (*Gatwick*).....£2,050 to £2,550

Southern Division

Heston Aerodrome, Hounslow, Middlesex
[Hounslow: 2345]

Divisional Controller, C. M. Colbeck
£2,400 to £3,000
Assistant Chief Telecommunications Engineer, J. C. Farmer.....£2,350 to £2,650
Deputy Director (Operations), J. M. Buckeridge
£2,050 to £2,550
Divisional Air Traffic Control Officer, G. W. Monk, O.B.E., D.F.C.....£2,450 to £2,650

Scottish Division

Divisional Offices, Broomhouse Drive, Saughton, Edinburgh, 11.
[Craiglockhart: 4040]

Divisional Controller, G. M. Macintosh, O.B.E.
£2,600 to £2,950
Assistant Chief Telecommunications Engineer, D. E. Horne.....£2,350 to £2,650
Deputy Director (Operations), D. F. Peel
£2,050 to £2,550
Aerodrome Commandant Special Grade (Prestwick), C. D. Waldron.....£2,050 to £2,550
Aerodrome Commandant Grade I (Renfrew), W. F. Murray, O.B.E.....£1,880 to £2,200
Divisional Air Traffic Control Officer, M. A. Young £1,965 to £2,165

Northern Division

24–26, Grove Park, Liverpool 8
[Sefton Park: 1421]

Divisional Controller (vacant)...£2,600 to £2,950
Assistant Chief Telecommunications Engineer, A. B. Gilbert.....£2,350 to £2,650
Aerodrome Commandant Grade I (Belfast), J. B. Selway, D.F.C.....£1,880 to £2,200
Deputy Director (Operations), G. F. K. Donaldson £2,050 to £2,550
Divisional Air Traffic Control Officer, J. Middlemas, O.B.E.....£1,965 to £2,165

BRITISH BROADCASTING CORPORATION

Broadcasting House, Portland Place, W.1
[Langham: 4468]

The BBC was incorporated under Royal Charter as successor to the British Broadcasting Company, Ltd., whose licence expired Dec. 31, 1926. Its present Charter came into force July 1, 1952, and expires July 29, 1964. The Chairman, Vice-Chairman and other Governors are appointed by the Crown. The BBC is financed by means of

revenue from receiving licences for the Home services and by a Grant in Aid from Parliament for the External services. The total number of licences in force in July 1959 was 14,874,472, of which 9,549,789 were for television as well as sound broadcasting.

Chairman, Sir Arthur ffforde.....£3,000
Vice-Chairman, Sir James Duff.....£1,000
Governors, The Earl of Balfour (*Scotland*), £1,000; Mrs. R. M. Jones (*Wales*), £1,000; J. R. McKee (*N. Ireland*); Mrs. T. Cazalet-Keir, C.B.E.; Dame Florence Hancock, D.B.E.; The Earl of Halsbury *each* £600
Director-General, H. Carleton Greene, O.B.E.
Directors, Sir Beresford Clark, K.C.M.G., C.B.E. (*External Broadcasting*); H. J. G. Grisewood, C.B.E. (*Chief Assistant to the Director-General*); Sir Harold Bishop, C.B.E. (*Engineering*); R. E. L. Wellington, C.B.E. (*Sound Broadcasting*); G. C. Beadle, C.B.E. (*Television*); J. H. Arkell (*Administration*).
Deputy Director of Television Broadcasting, C. McGivern, C.B.E.
Assistant Director of External Broadcasting, E. Tangye Lean, C.B.E.

BRITISH OVERSEAS AIRWAYS CORPORATION

B.O.A.C. Headquarters, London Airport, Hounslow, Middlesex.
[Skyport: 5511]

Established in 1939, British Overseas Airways Corporation acquired, on April 1, 1940, the air transport undertakings of Imperial Airways and British Airways, which had been at the disposal of the Secretary of State for Air since the outbreak of war.

B.O.A.C. is the larger of the two Government Corporations which are charged with the task of developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1949. Its functions are to operate the Commonwealth, North Atlantic, South Atlantic and Far Eastern routes from the United Kingdom. In June, 1960, the Corporation was operating sixty routes, with a gross route mileage of just over 400,000. On these routes there were more than 130 services weekly in each direction.

The members of the Corporation are appointed by the Minister of Aviation.

Chairman, Rear-Admiral Sir Matthew Slattery, K.B.E., C.B. (*allowance* £1,000).....£8,500
Deputy Chairman (part-time), Sir Wilfred Neden, C.B., C.B.E. (*allowances* £250).....£3,500
Members (full-time), B. Smallpeice (*Managing Director*); K. Granville, C.B.E.....£6,500
Members (part-time), J. W. Booth; J. A. Connel; L. Poole; The Lord Rennell, K.B.E., C.B.; F. Taylor*; The Lord Tweedsmuir, O.B.E.; Sir Walter Worboys, *each* £1,000.

* Salary not drawn.

BRITISH TRANSPORT COMMISSION

222 Marylebone Road, N.W.1
[Hunter: 1272]

The British Transport Commission was established as a public authority under the provisions of the *Transport Act*, 1947. On Jan. 1, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the Railway Executive Committee, the railways and road services formerly controlled by the *London Passenger Transport Board*, and various canal and inland waterway undertakings specified in the Act, were vested in the Commission. In accordance with the 1947 Act the Commission acquired road haulage undertakings which in 1946 were engaged in carriage of goods involving routes of 40 miles, or upwards, and necessitating journeys beyond a 25 miles radius from the operating centre. Under the provisions of the *Transport Act*, 1953, however, the Commission was required to dispose of a major part of the property held by it for the purposes of the part of its undertaking carried on through the Road Haulage Executive. The 1953 Act also provided for the re-constitution of the Commission, the abolition of the Railway Executive and the reorganization of the railways. On and from Oct. 1, 1953, all the functions of the Railway, the Road Haulage, the Docks and Inland Waterways and the Hotels Executives, respectively, were assumed by the Commission. From Jan. 1, 1955, six regional Area Boards for the management of the railways were established and separate managements were set up for road haulage, hotels, docks and inland waterways.

Chairman, Gen. Sir Brian Robertson, Bt., G.C.B., G.B.E., K.C.M.G., K.C.V.O., D.S.O., M.C.....£10,000
Deputy Chairman, Sir John Benstead, C.B.E.....£8,000
Members, K. W. C. Grand; J. Ratter, C.B.E.; Maj.-Gen. G. N. Russell, C.B., C.B.E.; Sir Reginald Wilson, *each* £7,500; A. B. B. Valentine (*unpaid*).
Part-time Members, H. P. Barker; D. H. Cameron of Locheil, T.D.; F. Donachy, O.B.E.; R. F. Hanks;

Sir Leonard Sinclair; T. H. Summerson; Sir Philip Warter; Sir Cecil Weir, K.C.M.G., K.B.E., M.C. (*each* £1,000).
Secretary General, Maj.-Gen. Ll. Wansbrough-Jones, C.B., C.B.E.
Financial Adviser, H. E. Osborn.
Chief Solicitor and Legal Adviser, M. H. B. Gilmour.
Traffic Adviser, T. H. Hollingsworth.
Manpower Adviser, A. R. Dunbar, O.B.E.
Technical Adviser, R. C. Bond.
Public Relations Adviser, J. H. Brebner, O.B.E.
Adviser (Special Projects), G. W. Quick Smith, C.B.E.

London Transport Executive
55, Broadway, Westminster, S.W.1
[Abbey: 5600]

Chairman, A. B. B. Valentine..... £7,500
Deputy Chairman and Managing Director, A. H. Grainger..... £6,000
Members, L. C. Hawkins; B. H. Harbour; A. Bull, O.B.E. (*each* £5,000); *and (part-time)* The Lord Williams; The Lord Geddes of Epsom, C.B.E.; S. H. Leake, O.B.E. (*each* £1,000).
Secretary, R. M. Robbins.

Eastern Area Board
Liverpool Street Station, E.C.2
[Bishopsgate: 7600]

Chairman, Maj.-Gen. G. N. Russell, C.B., C.B.E.
Members, A. McLeod; A. F. Pegler; J. B. Peile; J. Tanner, C.B.E.; The Right Hon. Sir Henry Willink, Bt., M.C., Q.C.
Secretary, G. A. V. Hayes, M.B.E.

London Midland Area Board
Euston Station, N.W.1
[Euston: 1234]

Chairman, Sir Reginald Wilson.
Members, L. Cooke, O.B.E.; J. Haworth; Maj.-Gen. Sir John Kennedy, G.C.M.G., K.C.V.O., K.B.E., C.B., M.C.; Col. Sir Basil McFarland, Bt., C.B.E., H.M.L., A.D.C.; The Lord Rusholme; R. F. Summers.
Secretary, M. T. Howard-Williams, M.B.E.

North Eastern Area Board
Railway Headquarters Offices, York
[York: 53022]

Chairman, T. H. Summerson.
Members, G. H. Kitson, O.B.E., T.D.; L. H. McRobert, C.B.E., T.D.; P. D. Priestman, O.B.E.; Sir George Walton, K.B.E., C.B., T.D.
Secretary, C. H. Rafton.

Scottish Area Board
302 Buchanan Street, Glasgow, C.2.
[Douglas: 2900]

Chairman, D. H. Cameron of Lochiel, T.D.
Members, J. W. Armit, Ph.D.; Sir John Denholm, C.B.E.; F. Donachy, O.B.E.; P. L. Meldrum; Sir Hugh Rose, Bt., T.D.; Sir William Walker, T.D.
Secretary, R. S. Boyd.

Southern Area Board
Waterloo Station, S.E.1
[Waterloo: 5151]

Chairman, Sir Philip Warter.
Members, J. E. Binks; H. F. B. Iles; H. L. R. Matthews, C.B.E.; D. L. T. Oppé; Sir Kenneth Preston; J. MacN. Sidey, D.S.O.
Secretary, L. Mapleston.

Western Area Board
Paddington Station, W.2
[Paddington: 7000]

Chairman, R. F. Hanks.
Members, A. Chamberlain, M.C., T.D.; P. Morris; F. A. Parish, C.B.E.; Sir John Carew Pole, Bt., D.S.O., T.D.; C. W. Rodd; J. Ryan, C.B.E., M.C.

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]

Overseas Offices

British Travel Association: 680 Fifth Avenue, New York 19; 39 South La Salle Street, Chicago 3; 606 South Hill Street, Los Angeles 14; 50 Young Street, Sydney; 90 Adelaide Street West, Toronto; 661 Howe Street, Vancouver; 6 Place Vendome, Paris; 22 Neue Mainzerstrasse, Frankfurt/Main; Leidseplein 29, Amsterdam; Norrmalmstorg 1, Stockholm C; Reconquista 375, Buenos Aires; Rua Aurora 960, Salas 2–3, São Paulo; 252 Joppe Street, Johannesburg.

The functions of the Association can be summarized as follows: (*a*) to increase the number of visitors from overseas and (*b*) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 19 members, 8 of whom are nominated by the President of the Board of Trade: 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (2), the Welsh Tourist and Holidays Board (1) and the Northern Ireland Tourist Board (1). Four additional members representing the various interests concerned with travel and holidays in the United Kingdom may be appointed. The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Tourist Development Committee and the Holiday Development Committee, whose Chairmen are drawn from the Board. The Tourist Development Committee and Holiday Development Committee draw a proportion of their membership from the Board and the remainder from interested organizations.

Chairman, Sir Arthur Morse, C.B.E.
Director-General, J. G. Bridges, O.B.E.
Deputy Director-General, L. J. Lickorish.

CABLE AND WIRELESS LIMITED

Head Office—Mercury House, Theobald's Road, W.C.1

[Chancery: 4433]

Under the Commonwealth Telegraphs Act, 1949, the assets of the telecommunications services conducted by Cable and Wireless, Ltd., in the United Kingdom were transferred to the Post Office. The company, however, continues to be responsible for the operation of its telecommunications services overseas and to own the assets relative to those services.

Cable and Wireless, Ltd., operates overseas telecommunications services, comprising 147,000 nautical miles of submarine cables and 120 wireless circuits. Its operations include telegraphy (cable and radio), phototelegraphy, radiotelephony, ship-shore radiotelegraph including direction finding, aeronautical wireless facilities, internal telephone systems, and broadcasting services in Kenya. It has 105 branches overseas and a Cable Station and Training School in the United Kingdom.

The Company was formed in 1929 (as Imperial and International Communications, Ltd., the name being changed in 1934) to unify the oversea communications of the Empire, consequent upon the Imperial Wireless and Cable Conference of 1928. The Commonwealth Telecommunications Conference, 1945, recommended the acquisition of the services in the U.K. and the other self-governing countries of the Commonwealth by their respective governments, with an unifying Commonwealth Telecommunications Board to replace the existing advisory Commonwealth Communications Council. Cable and Wireless, Ltd., was therefore acquired (under the *Cable and Wireless Act*, 1946) by the U.K. Government as from January 1, 1947, new directors being appointed.

Chairman, Sir Godfrey Ince, G.C.B., K.B.E. £3,500 (and expenses up to £350)

Managing Directors, N. C. Chapling, C.B.E.; H. H. Eggers, C.M.G., O.B.E. £4,700 each (and expenses up to £200 and £150 respectively)

Traffic Manager, E. G. L. Howitt, M.B.E.

Chief Accountant, H. G. Thomas, O.B.E.

Staff Manager, E. Mockett, O.B.E.

CHARITY COMMISSION

Ryder Street, St. James's, S.W.1.

[Whitehall: 7621]

The Charity Commission was constituted under Act of Parliament in 1853 and reconstituted under the Charities Act, 1960, with the general function of promoting the effective use of charitable monies and a duty to keep a register of charities. The powers of the Commissioners over endowments held for educational purposes are exercised by the Minister of Education.

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

(Hours 9 to 5)

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of *Queen Anne's Bounty* (established 1704) and the *Ecclesiastical Commissioners* (established 1836). The main function of the Commissioners is the management of assets of the Church in order to endow and augment benefices, &c., and to carry out many administrative duties in relation thereto.

The Commissioners are required to carry all their revenues to a general income and expenditure account, the balance of which, after defraying secured charges, continuing grants and the cost of administration, etc., is available for special grants and provisions.

Summary of Income and Expenditure

(For the year to March 31, 1960)

Income:	
Estates (net).....	£4,248,677
Dividends, interest, etc.....	9,420,416
Trust funds.....	627,550
	£14,296,643
Expenditure:	
Benefices, dignitaries, Church property (including payments out of trust funds) and administration, etc.....	£11,902,360
Balance available for special grants and provisions.....	2,394,283
	£14,296,643

COMMONWEALTH RELATIONS OFFICE

Downing Street, S.W.1
[Whitehall: 2323]

In July, 1925, a new Secretaryship of State for Dominion Affairs was created, and as a result the Dominions Office was set up, to take over from the Colonial Office business connected with the self-governing Dominions, the self-governing Colony of Southern Rhodesia and the South African territories (Basutoland, Bechuanaland Protectorate and Swaziland) and business relating to the Imperial Conference.

In July, 1947, the titles of the Secretary of State for Dominion Affairs and the Dominions Office were altered to the Secretary of State for Commonwealth Relations and the Commonwealth Relations Office respectively. As from August 15, 1947, the Secretary of State for Commonwealth Relations assumed responsibility for relations with India and Pakistan and as from February 4, 1948, for relations with Ceylon.

On September 3, 1953, the self-governing Colony of Southern Rhodesia became part of the Federation of Rhodesia and Nyasaland, and the Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and the Federation.

The Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and Ghana as from March 6, 1957 and between the United Kingdom and the Federation of Malaya as from August 31, 1957.

COMMONWEALTH SHIPPING COMMITTEE

Berkeley Square House, W.1
[Mayfair: 9494, Ext. 2281]

Chairman, Sir Clement W. Jones, C.B.
Secretary, W. H. J. Crees, M.B.E.

COMMONWEALTH TELECOMMUNICATIONS BOARD

28 Pall Mall, S.W.1
[Whitehall: 5511]

On May 31, 1949, the Commonwealth Telecommunications Board was incorporated by Act of Parliament, and superseded the former Commonwealth Communications Council.

Chairman, Sir Ben Barnett, K.B.E., C.B., M.C.
Members, Col. D. McMillan, C.B., O.B.E. (*United Kingdom*); H. A. L. Pattison, C.B.E. (*Canada*); H. A. de Dassel (*Australia*); E. H. R. Green, C.B.E. (*New Zealand*); E. A. Sherlock, M.B.E. (*South Africa*); H. N. Mukerjee (*India*); A. A. Ansari (*Pakistan (Observer)*); A. Perera (*Ceylon*); G. T. Anstey, C.B. (*Rhodesia & Nyasaland*); W. J. Bigg, C.M.G. (*Other Commonwealth Territories*).
Secretary-General, W. W. Shaw-Zambra, C.V.O., C.B.E., T.D.

CONSERVANCY BOARDS

THAMES CONSERVANCY

2–3 Norfolk Street, Strand, W.C.2
[Temple Bar: 4982]

The conservation of the River Thames was originally granted to twelve Conservators in 1857. In 1909 the Port of London Authority took over all rights, powers and duties of the Conservators in respect of the river below Teddington. The Conservators of the River Thames under the Thames Conservancy Acts 1932 to 1959 now have jurisdiction over the River Thames from Cricklade in Wiltshire to a point about 265 yards below Teddington Lock; and under the Land Drainage Act, 1930, the Conservators are constituted the Drainage Board of the Thames Catchment Area. The principal duties of the Conservators as a Navigation Authority are the maintenance and improvement of the navigation, and the registration and regulation of craft; the Conservators also exercise jurisdiction for the prevention of pollution over the Thames Catchment Area, and over the fisheries in the River Thames within their jurisdiction. Their income for these purposes is derived from various tolls, fees, rents, licences, payments from the Metropolitan Water Board and certain water undertakers, and contributions by the councils of various riparian counties and county boroughs in the Thames Valley; while the funds for carrying out the powers and duties of a Drainage Board are obtained by precept from the county councils and county borough councils as prescribed by the Land Drainage Act. The Board consists of 41 Conservators and their term of office is three years.

Chairman, Sir Jocelyn Bray.
Vice-Chairman, Sir Humphrey Haslam, O.B.E.
Secretary, Solicitor and Parliamentary Officer, G. E. Walker, O.B.E.
Chief Engineer, H. C. Bowen, O.B.E., T.D.
Treasurer and Accountant, E. A. James.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place
Strand, W.C.2

This Board was established by the *Land Drainage Act*, 1930, as the flood prevention authority for the Lee watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts*, 1868–1938, and the *Rivers (Prevention of Pollution) Act*, 1951) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture, Fisheries and Food, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, E. R. Spragg, O.B.E.
Vice-Chairman, C. W. Wells.
Clerk of the Board, J. L. Spiller, D.F.C.
Engineer, N. Medrington.
Treasurer, W. E. Adams.
Protection of Water Officer, F. W. Swain.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Firth of Forth within the limits prescribed in the Order.

Chairman, The Earl of Mar and Kellie.
Clerk and Treasurer, M. D. Kennedy, W.S., Benview, Wellside Place, Falkirk.
Engineers, Messrs. Leslie & Reid, C.E., 53 Manor Place, Edinburgh.
Marine Superintendent, Lt.-Cdr. R. M. Roberts, D.S.C., R.N. (*ret.*).

COTTON BOARD

Royal Exchange 6th Floor, Manchester 2

Established under the Cotton Industry Development Council Order, 1948.

Chairman, The Viscount Rochdale, O.B.E., T.D.
Other Independent Members, F. Rostron, M.B.E.; O. Bertoya.
Members representing the Employers, W. T. Winterbottom, C.B.E.; J. M. H. Grey; W. Crossley; G. D. Hughes.
Members representing Employees, Sir Alfred Roberts, C.B.E.; L. T. Wright; L. Sharp, M.B.E.; J. W. Whitworth.
Director-General, J. Broatch.

CROWN ESTATE COMMISSIONERS

Whitehall, S.W.1
[Trafalgar: 2211]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in *England and Wales* have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1960, the total Receipts by the Commissioners were £3,331,412. The Expenditure (including Property Tax allowed) was £1,452,729. The sum of £1,790,000 was paid to the Exchequer in 1959–60 as *Surplus Revenue*, being a net sum from which no deductions have to be made for administration.

The Land Revenues in *Ireland* have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in *Scotland* were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), Sir Malcolm Trustram Eve, Bt., G.B.E., M.C., T.D., Q.C.

Second Commissioner (and Secretary) J. A. Sutherland-Harris, C.B. £5,000

Commissioners (part-time), M. F. Berry; The Earl of Bradford, T.D.; D. H. Cameron of Lochiel, T.D.; W. C. Farnsworth, C.B.E.; Sir Edward Gillett; The Lord Williams.

Deputy Commissioner, H. A. C. Gill ..... £2,400 to £3,000

Assistant Commissioner, P. S. Bolshaw ..... £1,700 to £2,375

Crown Estate Surveyor, L. E. C. Osborne £2,700

Deputy Crown Estate Surveyor, C. J. Gardner, O.B.E. ..... £1,840 to £2,120

Chief Executive Officer, J. Griffiths ..... £1,950 to £2,250

Accountant and Receiver-General, F. V. Mills ..... £1,490 to £1,850

Senior Executive Officers, A. P. Brooks; J. Griffiths; C. J. Heather; R. E. Mildren; E. F. Richards; D. T. Hunt (*Edinburgh*) ..... £1,450 to £1,800

Legal Adviser (part-time), Sir Francis Enever, C.B., M.C.

Senior Legal Assistants, J. G. Allan; A. W. Robinson ..... £1,720 to £2,400

Solicitor, Scotland, N. C. Grant.

Director of Forestry and Gardens, Sir Eric Savill, K.C.V.O., C.B.E., M.C.

Windsor Estate

Surveyor and Deputy Ranger, Maj. A. W. Haig, M.V.O.

BOARD OF CUSTOMS AND EXCISE

King's Beam House, Mark Lane, E.C.3

[Mansion House: 2515]

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" in the Custom House, Lower Thames Street, E.C.3, replacing that built by Charles II and rebuilt after destruction by fire in 1718 and 1814. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on April 1, 1909.

The Board

Chairman, Sir James Crombie, K.C.B., K.B.E., C.M.G. £7,000

Private Sec., C. Bamfield.

Deputy Chairman, Sir Douglas Owen, K.B.E., C.B. £5,000

Director of Establishment and Organization and Commissioner, J. E. B. Finlay, C.B., O.B.E., T.D. £3,800

Commissioners, C. H. Blake; G. Imms; K. B. Pepper (*Joint Secretaries*) £3,800

Secretaries' Office

Assistant Secretaries, A. R. Ashford; H. F. Christopherson; C. T. Cross; G. C. English; H. F. Hewett; J. F. Hewitt; J. K. Hulme, O.B.E.; Mrs. D. C. L. Johnstone, C.B.E.; E. A. Knight; F. Lee; G. G. Leighton-Boyce; J. Mair; T. H. Pratt; R. W. Radford, M.B.E.; C. H. Veale; J. M. Woolf ..... £2,400 to £3,000

Principals, R. Bamfield; A. H. Barrett; H. D. Davis, D.S.O., M.B.E.; E. L. Fletcher; J. C. Fletcher; W. H. Foulkes; A. McK. Fraser; C. Freedman; P. N. Gerosa; N. E. Godfrey; S. A. Green; L. S. Gross; F. T. Hallett; D. I. Harbour; L. D. Hawken; R. J. Hayman; J. S. Hill, O.B.E.; S. H. P. Holt; B. H. Knox; F. J. Kumpf; H. Lawrence; J. C. Leeming; K. C. Messere; J. Midgley; P. L. O'Keefe; A. C. Ralph; B. Rose; A. S. H. Saville, O.B.E.; M. H. Smith; M. W. Townley; D. Turnell; W. L. Vonderahe; R. H. Watson; L. J. White ..... £1,700 to £2,375

MINISTRY OF DEFENCE

Storey's Gate, S.W.1
[Whitehall: 7000]

The Ministry of Defence was formally constituted on January 1, 1947, under the *Ministry of Defence Act*, 1946. The Minister of Defence is responsible for the formulation and general application of a unified policy relating to the Armed Forces of the Crown as a whole and their requirements, as defined in White Papers under the heading *Central Organization for Defence* (Cmd. 6923/1946 and Cmd. 476/1958). He has authority to decide (subject to the responsibilities of the Cabinet and the Defence Committee), all major matters of defence policy affecting the size, shape, organization and disposition of the Armed Forces and their weapons and war-like equipment and supply (including defence research and development). He has further responsibilities arising from United Kingdom participation in international defence organizations.

The Minister of Defence is the Deputy Chairman of the Defence Committee of the Cabinet, of which the Prime Minister is Chairman.

DEVELOPMENT COMMISSION

3 Dean's Yard, Westminster, S.W.1
[Abbey: 1177]

The Development Commission was established and constituted under the *Development and Road Improvement Funds Act*, 1909, and the amending Act of 1920. The Act of 1909 as affected by the *Forestry Act*, 1919, the *Ministry of Transport Act*, 1919 and the *Fisheries Act*, 1955, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater.

Chairman, The Countess of Albemarle, D.B.E.
Other Commissioners, Lt.-Col. Hon. R. E. B. Beaumont, T.D.; C. I. C. Bosanquet; L. K. Elmhirst; J. L. Longland; W. Scholes; Prof. R. C. Tress; W. J. Wright, C.B.E.
Secretary, F. S. O. Broughton . . . £2,400 to £3,000

NATIONAL DOCK LABOUR BOARD

22–26 Albert Embankment, S.E.11

The National Dock Labour Board administers the scheme for giving permanent employment to dock workers under the *Dock Workers (Regulation of Employment) Act*, 1946.

Chairman, The Lord Crook.
General Manager and Secretary, M. R. Haddock, O.B.E.
Assistant General Manager, J. H. C. Pape.
Chief Accountant, H. C. Harper, O.B.E.

THE DUCHY OF CORNWALL

Buckingham Gate, S.W.1
[Victoria: 7346-8]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R.H. The Prince Philip, Duke of Edinburgh, K.G., K.T., G.M.B.E.; The Earl of Radnor, K.C.V.O. (*Lord Warden of the Stannaries*); Sir Edward Peacock, G.C.V.O. (*Receiver General*); The Lord Roborough; Brig. The Lord Tryon, K.C.V.O., D.S.O.; J. T. Molony, Q.C. (*Attorney-General of the Duchy*); Sir John Carew Pole, Bt., D.S.O.; P. G. T. Kingsley, C.V.O. (*Secretary*).

Other Officers of the Duchy of Cornwall

Auditor, W. E. Parker, C.B.E.
Solicitor, B. B. D. Stopford.
Asst. Secretary, G. H. H. Syms, M.V.O.
Deputy Receiver, R. F. H. Adams.
Sheriff (1960–61), N. Kendall.

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.2
[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The Right Hon. Charles Hill, M.D., M.P. £5,000
Private Secretary, Miss B. M. Shedden.
Vice-Chancellor, Sir Leonard Stone, O.B.E.
Attorney-General and Attorney and Serjeant within the County Palatine of Lancaster, Sir Milner Holland, C.B.E., Q.C.
Receiver-General, Brig. The Lord Tryon, K.C.V.O., D.S.O.
Clerk of Council and Keeper of Records, R. Somerville, C.V.O.
Solicitor, K. R. E. Taylor, C.V.O.
Chief Clerk, E. R. Wheeler, M.B.E.
Registrar, Manchester District, R. A. Forrester.
Do. Liverpool District, W. E. Helsby.
Do. Preston District, W. E. Helsby.

COURT OF CHANCERY OF THE COUNTY PALATINE OF DURHAM

Registrar's Chambers, Durham and Sadberge, Old Elvet, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I., in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Norham and Islandshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.

Chancellor, H. E. Salt, Q.C.
Attorney-General, G. de P. Veale, Q.C.
Solicitor-General, G. S. Waller, O.B.E., Q.C.
Registrar of Chancery Court, E. L. Proud.

MINISTRY OF EDUCATION

Curzon Street, W.1
[Hyde Park: 7070]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration for the financial year 1960 was estimated at £3,052,666.

Minister of Education, The Rt. Hon. Sir David McAdam Eccles, K.C.V.O., M.P. £5,750
Principal Private Sec., J. S. Arthur £1,650 to £2,325
Asst. Private Sec., R. H. Stone.
Parliamentary Private Sec., W. R. van Straubenzee, M.B.E., M.P.
Parliamentary Secretary, K. P. Thompson, M.P. £3,250
Permanent Secretary, Dame Mary Smieton, D.B.E. £7,000
Private Sec., B. C. Peatey.
Deputy Secretaries, R. N. Heaton, C.B.; A. A. Part, C.B., M.B.E. £4,950
Permanent Secretary of Welsh Department, Sir Ben Bowen Thomas £3,750

ELECTRICITY AUTHORITIES

THE ELECTRICITY COUNCIL

Trafalgar Buildings, 1 Charing Cross, S.W.1
(Whitehall: 2121)
Winsley Street, W.1
(Museum: 4040)

The Electricity Act, 1957, provided for the dissolution of the Central Electricity Authority, as from Jan. 1, 1958, and for the allocation of its duties and powers to an Electricity Council and a Central Electricity Generating Board. These bodies were set up on Sept. 1, 1957, and as from Jan. 1, 1958, all liabilities and obligations of the Central Authority in respect of British Electricity Stock issued before that date were tranferred to the Electricity Council, and all property, rights, liabilities and obligations which before that date pertained to the Central Authority, with certain exceptions which by agreement under the Act vested in the Council, were transferred to the Generating Board.

Electricity Council

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4
[Fleet Street: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of funds provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of

those accounts are reported to the House of Commons.

Comptroller and Auditor General, Sir Edmund Compton, K.B.E., C.B. £7,000

Private Secretary, G. W. Garside.

Secretary, P. J. Curtis, C.B., C.B.E. £3,800

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER

17 North Audley Street, W 1
[Mayfair: 7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Scientific Societies Act, the Trustee Saving Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act, the Superannuation and other Trust Funds (Validation) Act and the Prevention of Fraud (Investments) Act. Under the Industrial Assurance Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

Chief Registrar and Industrial Assurance Commissioner Sir Cecil Crabbe £5,000
Private Sec., Miss M. E. Blake.

Registry of Friendly Societies, Scotland

19 Heriot Row, Edinburgh, 3
[Edinburgh Waverley: 4371]

Assistant Registrar, J. Craig, W.S.

THE GAS COUNCIL

1 Grosvenor Place, S.W.1
[Belgravia: 4321]

The Gas Council was set up by the Gas Act, 1948, to advise the Minister of Power on the affairs of the gas industry and to assist the Area Boards in the discharge of their functions. It is responsible for the creation and issue of British Gas Stock.

Chairman, Sir Henry Jones, M.B.E. £8,500
Deputy Chairman, W. K. Hutchison, C.B.E. £7,500

The Members are the Chairmen of the 12 Area Gas Boards.

Area Gas Boards

Twelve Area Gas Boards are established by the Act. The assets and liabilities of former Gas Undertakings vested on May 1, 1949, in these Boards which are responsible for the manufacture and distribution of Gas and for the production of residuals.

Chairmen

Scottish, S. Smith, C.B.E.
Northern, E. Crowther, C.B.E.
North Western, D. P. Welman.
North Eastern, Dr. R. S. Edwards.
East Midlands, R. S. Johnson, M.B.E., T.D.
West Midlands, G. le B. Diamond, C.B.E.
Wales, T. Mervyn Jones.
Eastern, J. H. Dyde, O.B.E.
North Thames, M. Milne-Watson, C.B.E.
South Eastern, R. N. B. D. Bruce, O.B.E., T.D.
Southern, C. H. Leach.
South Western, C. H. Chester, C.B.E. . . each £6,500

Gas Consultative Councils

Twelve Gas Consultative Councils were set up by the Minister of Power, one for the area of each of the Gas Boards, to represent the interests of consumers. These Councils deal with specific complaints and consider matters of general interest to the consumer. Under the Act the Area Boards are required to inform the Councils of their general plans and arrangements. Each Council Chairman is an *ex officio* member of his Area Board.

Chairmen

Scottish, Sir Robert Nimmo.
Northern, J. Hoy, M.B.E., B.E.M.
North Western, R. M. Bradburn.
North Eastern, H. Sutcliffe.
East Midlands, A. H. Wood.
West Midlands, J. H. Lewis, O.B.E.
Wales, Maj. C. G. Traherne, T.D.
Eastern, Lt.-Col. R. I. Musson, M.C.
North Thames, E. Bayliss, O.B.E.
South Eastern, Dame Alix Meynell, D.B.E.
Southern, F. C. Rea, O.B.E.
South Western, Sir Colin Campbell, O.B.E.

Secretary, Brigadier G. A. C. Macnab, C.B., C.M.G.
£2,500

MINISTRY OF HEALTH

Savile Row, W.1
[Regent: 8411]

The Ministry of Health was established by the *Ministry of Health Act*, 1919, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. Since 1955 the Ministry has assumed responsibilities for food hygiene and welfare foods which were previously carried out by the Ministry of Food. On May 1, 1957, responsibility for certain aspects of the recruitment of nurses and midwives was transferred from the Ministry of Labour and National Service to the Ministry of Health. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare services; hospitals and specialist services; mental health services; nutrition, and international health. The Department is also responsible for the National Hospital Service Reserve and, in conjunction with the Home Office, for the Ambulance and First Aid Section of the Civil Defence Corps under the Civil Defence Act, 1948.

NATIONAL HEALTH SERVICE

(For main article, *see* Index)

Regional Hospital Boards

England and Wales are divided into 15 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

Areas

Newcastle, Benfield Road, Newcastle upon Tyne 6. *Chairman*, E. F. Collingwood, C.B.E. *Secretary*, R. Dobbin.
Leeds, Park Parade, Harrogate, Yorks. *Chairman*, Maj. J. C. Hunter, C.B.E., M.C. *Secretary*, W. A. Shee.
Sheffield, Fulwood House, Old Fulwood Road, Sheffield, 10. *Chairman*, A. V. Martin. *Secretary*, L. W. Faulkner.
East Anglian (Cambridge), 117 Chesterton Road, Cambridge. *Chairman*, Sir Stephen Green, Bt. *Secretary*, K. V. F. Morton, C.I.E.
North West Metropolitan, 40 Eastbourne Terrace, W.2. *Chairman* (vacant). *Secretary*, A. J. Bennett.

HISTORICAL MANUSCRIPTS COMMISSION

See Record Office

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

34 Chester Terrace, Regent's Park, N.W.1.
[Welbeck: 7711]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 1714. The terminal date was extended after the late war to 1850. The Commission has published up to present date inventories covering nine counties. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, they have no power to implement their recommendations.

Chairman, The Marquess of Salisbury K.G., P.C.
Commissioners, Miss Rose Graham, C.B.E., D.Litt., F.S.A.; Sir Cyril Fox, D.Litt., Ph.D., F.B.A., F.S.A.; Walter Godfrey, C.B.E., F.R.I.B.A., F.S.A.; Sir Albert Richardson, K.C.V.O., R.A., Litt.D., F.S.A., F.R.I.B.A.; Professor I. A. Richmond, C.B.E., D.Litt., LL.D., F.B.A., F.S.A.; Sir James Mann, K.C.V.O., F.B.A., F.S.A.; The Earl of Shaftesbury, P.C., K.P., G.C.V.O., C.B.E., LL.D.; Professor W. H. Galbraith, D.Litt., Litt.D., F.B.A.; Professor S. Piggott, F.B.A., F.S.A.; W. Godfrey Allen, F.S.A., F.R.I.B.A.; Lord Digby, K.G., D.S.O., M.C., T.D.; Sir John Summerson, C.B.E., F.B.A., F.S.A., A.R.I.B.A.; Professor H. C. Darby, O.B.E., Ph.D.; Christopher Hussey, C.B.E., F.S.A.; C. A. Ralegh Radford, F.B.A., F.S.A.; Prof. J. G. D. Clark, Ph.D., F.B.A., F.S.A.; Prof. F. Wormald, Litt.D., F.B.A., F.S.A.; R. H. Parker, C.B.E., M.C.
Secretary, G. F. Webb, C.B.E., F.B.A., F.S.A... £2,500

ROYAL COMMISSION ON ANCIENT MONUMENTS IN WALES AND MONMOUTHSHIRE

17 Queens Road, Aberystwyth
[Aberystwyth: 256]

The Commission was appointed in 1908 to make an Inventory of the Ancient and Historical Monuments in Wales and Monmouthshire.

Chairman, Prof. Sir John Edwards, D.Litt., F.B.A.
Commissioners, Sir Cyril Fox, D.Litt., Ph.D., P.P.S.A., F.B.A.; Sir Ifor Williams, D.Litt., LL.D., F.S.A. F.B.A.; Prof. A. H. Dodd; Prof. I. Ll. Foster, F.S.A.; W. F. Grimes, C.B.E., F.S.A.; T. A. Lloyd, LL.D., F.R.I.B.A., F.S.A.; A. J. Taylor, F.S.A.
Secretary, A. H. A. Hogg, F.S.A.

ROYAL COMMISSION ON ANCIENT AND HISTORICAL MONUMENTS OF SCOTLAND

7 Coates Gardens, Edinburgh 12
[Edinburgh: Don. 7680]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments of Scotland from the earliest times to 1707, and to specify those that seem most worthy of preservation. The terms of reference were extended by Royal Warrant dated Jan. 1, 1948, to cover the period since 1707 at the Commissioners' discretion.

Chairman, The Earl of Wemyss and March LL.D.
Commissioners, Prof. I. A. Richmond, C.B.E., LL.D., Litt.D., D.Litt., F.B.A., F.S.A.; Prof. S. Piggott, F.B.A., F.S.A.; W. Douglas Simpson, O.B.E., D.Litt., F.S.A.; I. G. Lindsay, O.B.E., A.R.S.A., F.R.I.B.A.; Prof. W. C. Dickinson, M.C., D.Litt., LL.D.; G. P. H. Watson, M.B.E., F.R.I.B.A., R.S.W.; Mrs. A. I. Dunlop, O.B.E., Ph.D., D.Litt., LL.D.; A. Graham, F.S.A.

HOME OFFICE

Whitehall S.W.1

[Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and her subjects, and between the U.K. Government and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, byelaws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonials and formal business connected with honours.

MINISTRY OF HOUSING AND LOCAL GOVERNMENT

Whitehall, S.W.1
[Whitehall: 4300]

The Ministry of Housing and Local Government was set up in 1951 under the title of Ministry of Local Government and Planning and took over the housing and local government functions of the Ministry of Health and the functions of the Ministry of Town and Country Planning. It is responsible for the administration of Government housing policy, housing standards and the general supervision of local authority housing programmes; the administration of the planning acts concerning the use and development of land in England and Wales; and it is the department principally concerned in the supervision of the work of local authorities.

CENTRAL OFFICE OF INFORMATION

Hercules Road, Westminster Bridge Road, S.E.1
[Waterloo: 2345]

The Central Office of Information came into being on April 1, 1946, as a non-Ministerial Department with a separate vote; it operates in England and Wales, the regional work in Scotland being undertaken by the Scottish Home Department, and in Northern Ireland by the Government of Northern Ireland. The Department performs common technical and production functions, and gives specialized assistance and advice to other departments, for both home and overseas publicity purposes. Some of its principal functions are: (*a*) To act as the central Government agency for the preparation of publicity material required by departments, such as films, press and poster advertising, photographs, books, pamphlets and magazines and exhibitions; to maintain liaison with departments on their publicity requirements; and to provide technical advice and assistance, both at home and overseas. (*b*) To undertake publicity as required on home matters of interdepartmental scope. (*c*) To provide a daily service of comment and background information for the use of press officers and other British representatives overseas. (*d*) To provide a regional publicity organization in this country for the use of departments requiring such services. (*e*) To provide the machinery in this country for the central issue of Government news.

Senior Information Officer, D. H. Davies ..£1,450 to £1,800

BOARD OF INLAND REVENUE

Somerset House, W.C.2
[Temple Bar: 2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, estate duty, stamp duties and other direct taxes, and also for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. Since April 1, 1960, the Board has also been responsible for the management and collection of tithe redemption annuities. Salaries and expenses of the Board for 1960/61 were estimated at £50,671,000.

The Board

Secretary, J. P. Keane.

MINISTRY OF LABOUR

8 St. James's Square, S.W.1
[Whitehall: 6200]

The office of Minister of Labour was created by the *New Ministries and Secretaries Act*, 1916, which provided for the transfer to the Ministry of Labour of certain of the duties of the Board of Trade. The principal functions of the Ministry of Labour are: (1) Administration of the *Employment and Training Act*, 1948, and provision of facilities and services for the purposes of assisting persons to select, fit themselves for, obtain and retain employment suitable to their age and capacity, of assisting employers to obtain suitable employees, and generally for the purpose of promoting employment in accordance with the requirements of the community, including the operation of, (*a*) a national system of Employment Exchanges; (*b*) the Technical and Scientific Register, the Professional and Executive Register and Nursing Appointments Offices; and (*c*) Government schemes for vocational training. (2) Central administration through the Central Youth Employment Executive of a comprehensive Youth Employment Service, which may be provided locally either by the local education authority under a scheme approved by the Minister or the Ministry's local office. (3) Collection and publication of labour statistics including statistics of manpower, employment and unemployment, wage rates, earnings, hours of labour, retail prices (including compilation of the index of retail prices), household expenditure, industrial disputes, employers' and employees' organizations and industrial accidents and diseases, publication of *Ministry of Labour Gazette*. (4) Manpower policy and co-operation with other Government Departments on such matters as the distribution of industry and the maintenance of a high and stable level of employment. (5) Administration of the *National Service Acts*; reinstatement in civil employment. (6) Resettlement in civil employment of men called up under the National Service Acts or released from service in the Regular Forces. (7) Administration of the *Disabled Persons (Employment) Acts*, 1944 and 1958, to enable disabled persons to secure employment, including provision where necessary of courses of industrial rehabilitation and vocational training, and of special (sheltered) conditions of employment. (8) Administration and enforcement of the *Factories Acts* 1937 to 1959, and other legislation concerning the safety, health and welfare of workpeople in factories and certain other premises. (9) Administration of the *Anthrax Prevention Act* 1919, and of the Government Wool Disinfecting Station at Liverpool. (10) Dealing with industrial relations, i.e. questions affecting relations between employers and employed, in particular with: (*a*) assistance in the prevention or settlement of industrial disputes, including the administration of the *Conciliation Act*, 1896, the *Industrial Courts Act*, 1919, and the *Terms and Conditions of Employment Act*, 1959; (*b*) administration of the *Wages Council Acts*, 1959; (*c*) administration of the *Baking Industry (Hours of Work) Act*, 1954, and (*d*) encouragement of good personnel management and of arrangements for joint consultation in industry. (11) Administration of *Dock Workers (Regulation of Employment) Act*, 1946. (12) Employment of foreign workers in Great Britain. (13) Dealing with labour policy in the international field, including relations with the International Labour Organization and other international organizations and with overseas questions concerning labour and employment. (14) Agency work for other Government Departments in connexion with National Insurance, National Assistance, repayment of income tax to unemployed persons and the issue of passports.

The gross amount for the services administered by the Ministry (Parliamentary Vote, Class VI. 8) was estimated at £27,056,000 for the year ending March 31, 1961, reduced by Appropriations in Aid to a net sum of £22,548,000. The gross estimate is made up as follows: Salaries, £17,079,500 for headquarters, departments and outstations: £443,000 for travelling, etc., expenses: £322,000 for telegraph and telephone services and £93,500 for incidental administrative expenses; £49,500 for adjudication, advisory services, etc.: £7,968,500 for employment, training and rehabilitation, including £3,953,000 for special facilities for seriously disabled persons; £222,000 for expenses in connexion with National Service; £525,000 for repayment of loan charges in respect of employment schemes; £339,000 in connexion with the International Labour Organization, including a subscription to the Organization of £325,500; and £14,000 for anthrax disinfection. The appropriations in aid amounting to £4,508,000 include estimated repayments of some £3,866,500 for agency services.
